Fig. 1. North-west Angle of the Presbytery.
Figs. 2-4. Details of Architectural Ornament in the Presbytery.
- XVI. San Salvatore, Spoleto : The East Façade and Details.
- XVII. San Salvatore, Spoleto : The Presbytery from the Exterior.

SOME BUCCHERO VASES FROM ARDEA

THE objects described below were found near Ardea in Latium during the digging of a gun-position in June 1944. The site was in a valley bottom about one mile SSE of the modern town, and the area dug was an L-shaped trench two feet wide and with arms four feet and six feet long. Unfortunately military duties prevented continuous observation,¹ but the following points are clear. Work began on the shorter arm of the trench; and there were found sherds of bucchero and of coarse wares (nos. 10, 11, 23-26, 28, 29), and a 'red pot' which was removed and lost. Three days later, digging was resumed and yielded first a bucchero cup (no. 15) and oinochoe (no. 9), then sherds of coarse brownish ware (no. 27), and farther on at a depth of two and a half feet two bucchero oinochoai (nos. 7, 8). Next day three bucchero amphoriskoi (nos. 12-14) were found still farther on in the same section of trench. An offset trench was then started to the right, with a depth of two and a half to three feet. In this offset were found six alabastra (nos. 1-6), all lying together, and close to them two bucchero cups (nos. 16, 17); a little beyond were two bucchero kantharoi (nos. 21, 22); nothing else had been found when orders to advance put an end to the work. Apart from the pottery no objects were observed, nor any traces of structures or of discoloration in the soil.

The site is probably that of a grave or graves. The terrain is too badly drained to be suitable for building; and the pots found seem generally to have been complete, though (as the breaks show) some fragments were not picked up by the working party. The alabastra (nos. 1-6), two of the cups (nos. 16, 17), and the pair of kantharoi (nos. 21, 22) should go together: if the remaining items are from another grave, it was probably of about the same date, as the comparison of the cups suggests. The list of finds is as follows.²

Corinthian (no. 1) and *Italo-Corinthian* (nos. 2-6).

1. Alabastron: ht. 6.6, d. 3.9. Lion and bull. Pl. Id. About 640-635 B.C. (beginning of Transitional phase): another alabastron by the same hand but apparently rather earlier was, as Mr. T. J. Dunbabin informs us, found at Perachora (to be published in *Perachora* ii, no. 1503). See Postscript, p. 4.

2. Alabastron: ht. 12.7, d. 6.5. Dots: subgeometric dogs. Pl. Ic. Near 600 B.C.

3. Alabastron: ht. 12.2, d. 6.4. Decoration and date as no. 2.

4. Alabastron: ht. 11.7, d. 6.5. Dots. Pl. Ib. Near 600 B.C.

5. Alabastron (now lost). Generally similar to nos. 2-4.

6. Alabastron: ht. (as preserved) 5.0, d. 4.0: the upper part is missing. Banded. Pl. Ia. Late seventh century.

No. 1 is an admirable piece of Corinthian of the very beginning of Payne's Transitional period. Nos. 2-4 are in shape and style faithful reproductions of the next phase of Corinthian pottery (Early Ripe); their greater size suggests a date near the end of that phase; the fine clay, buff tending to pink in the core,

¹ I was present when nos. 1-6, 7, 15, 16-17, 21-22 were found, and examined the trench then and at other times. Between my visits the sergeant kept notes and made some careful drawings. C.B.R.B.

² These pots, except for nos. 3, 5, 14 and 30, are now

in the Museum of Classical Archaeology in Cambridge. Dimensions are given in centimetres. The photographs reproduced here were very kindly taken by Dr. H. Bloesch. For the mending of the pots we are indebted to Mr. R. Johnson.

is more lack-lustre than true Corinthian. No. 5 presumably goes with these three. Of no. 6 shape and decoration have an un-Corinthian flavour, but the clay is clearer in tone than nos. 2-4. Cf. to nos. 2 and 3 *CVA Louvre* 9, pl. 605.16, seemingly by the same hand: to no. 4 *ibid.* pl. 601.10: to no. 6 *ibid.* pl. 601.25.

Bucchero.

The clay of all these pieces is a very dark grey with fine specks of mica. A fine coat of glossy black seems to have covered the exposed surfaces—inside the necks of oinochoai and amphoriskoi it reaches down for 1.5 centimetres or so.³

7. Oinochoe: ht. (as preserved) 14.0, d. 9.1: a drawing made at the time of finding shows that the ribbon-handle, now missing, projected considerably to the back. Pl. II*d*.

8. Oinochoe: ht. (as preserved) 13.3, d. 8.7: the handle and part of the lip and neck are missing. Shape as no. 7.

Cf. F. Magi in *La Raccolta Benedetto Guglielmi*, Citta del Vaticano, 1939, i, nos. 57-60; *Not. Scav.* 1935, 350, fig. 211 (from a chamber-tomb at Veii, which also contained an amphoriskos, a cup, and two kantharoi similar to ours). These oinochoai have incised patterns, ours are plain.

9. Oinochoe: ht. (as preserved) 19.4, d. 12.4: a few fragments are missing which include the front part of lip and neck: broad ribbon-handle. Groups of 5-7 incised lines encircle the body below the angle of the shoulder and above the angle of the base. Pl. II*e*.

Oinochoai of this heavier type are common in the sixth century, but have generally handles of more developed forms and more rounded bodies: cf. Magi, *op. cit.* no. 61, etc.

10. Fragments of oinochoe: smaller than no. 9. The shape of the body and the decoration (if any) cannot be recovered.

11. Fragments of oinochoe: similar to no. 9 in size, shape of body, and decoration.

12. Amphoriskos of Villanovan shape: ht. 10.7, d. 7.9. Pl. II*f*.

13. Amphoriskos of Villanovan shape: ht. 10.2, d. 7.4. Shape as no. 12.

14. Amphoriskos of Villanovan shape: ht. 9.8, d. 7.2. Shape as no. 12.

Cf. *Not. Scav.* 1935, 350, fig. 212 (grave at Veii: see above under no. 8). Earlier shapes are more potbellied. Cf. also the 'olpai' with a single high handle (several from Magliano in contexts generally of the end of the seventh century: the closest to our amphoriskoi are *St. Etr.* ix, pls. 4.1 (le Ficaie grave 1, with Italo-Corinthian of the late seventh century) and 5.14, of which the context is not recorded).

15. Cup: d. (at lip) about 18.0, ht. 8.5: most of one side is missing. On the outside, three groups of 3-5 incised lines encircle the bowl. Shape similar to no. 16, but rather shallower.

16. Cup: d. (at lip) 12.8, ht. 6.9: about one third is missing. Round the outside, two groups of 4-5 incised lines. Pl. II*b*.

17. Cup: d. (at lip) 11.7, ht. 6.6: one handle is missing. Round the outside, two groups of 3 incised lines. Pl. II*a*.

18. Cup: d. (at lip) about 13.7, ht. about 8.2: about two thirds are missing. Shape as nos. 16 and 17. Round the outside, two groups of 4-5 incised lines.

19. Cup: d. (at lip) about 15.0, ht. about 8.5: about half is missing. Shape as nos. 16 and 17. Round the outside, a group of 3-5 incised lines near the top of the bowl; the lower part of the bowl is missing.

Cf. Magi, *op. cit.* no. 3; J. Boehlau, *Jb. d. Arch. Inst.* 1900, 181-5, fig. 23.5—one of eight from Pitigliano grave XXIII, which also contained four kantharoi (e.g. fig. 23.1) of the same shape as ours and Italo-Corinthian of the end of the seventh century; *Mon. Ant.* iv, fig. 155—from grave 14 at Monte Soriano (Narce); *Not. Scav.* 1935, 350, fig. 21*f*. (grave at Veii: see above under no. 8); *St. Etr.* ix, pl. 2, third of bottom row (from Magliano, Poggio Volpaio grave 4, which included six kantharoi and four chalices similar in shape to ours and also Italo-Corinthian of the late seventh century).

20. Of a few unassigned fragments two cannot belong to any of the pots described here separately: (a) lower part of bowl of another cup, with a group of 6 incised lines outside; (b) a small fragment of an incurved rim, from a kotyle (?).

21. Kantharos: d. (including handles) 15.9, ht. (including handles) 9.5. Pl. II*c*.

22. Kantharos: d. (including and restoring handles) 15.1, ht. (including handles) 9.0: one handle and part of the foot are missing. Shape as no. 21.

³ Presumably this coat is a finer, peptised solution of the clay of which the pot itself is made: hence its sheen and darker tone.

Cf. Magi, *op. cit.*, no. 28; K. M. T. Atkinson, *Papers BSR* xiv, 116-9, where a list is given.⁴

23. Chalice: d. (at lip) about 14.0: surviving fragments come from lip and underside of bowl. Round the outside of the lip a group of three broadish grooves.

Chalices of this size, shape, and decoration are common, and generally have a low foot. Cf. Magi, *op. cit.*, no. 4; Boehlau, *Jb. d. Arch. Inst.* 1900, 187, fig. 29.2—one of seven from Pitigliano grave III (comparison with the dimensions of other pots of the illustration shows that it is the diameters, not the heights, that are 13.3-15.0: other items were six kantharoi and Italo-Corinthian of about 600 B.C.); *Mon. Ant.* iv, 451-3, fig. 156—two specimens from the equipment of one of the two interments in grave 7 at Monte Soriano (Narce), which also included two kantharoi as our nos. 21 and 22 and an oinochoe resembling, except for its shorter neck, our no. 9; E. H. Dohan, *Italic Tomb-Groups*, Philadelphia, 1942, pl. 41.16—from grave 65 M at Narce, which contains Italo-Corinthian of round 600 B.C. as well as an Attic b.f. lekkythos of about 540 B.C.; *St. Etr.* ix, from Magliano, Poggio Volpaio grave 4 (pl. 2, four examples in last three rows); grave 5 (pl. 1, nine examples in last three rows); grave 7 (pl. 3, first, fourth and sixth of bottom row); le Ficaie grave 2 (pl. 4.4, 5, 7, 8)—for all these graves see n. 4.

FIG. 1—COARSE DISH, no. 25. c. $\frac{1}{2}$

Red Ware.

24. Bowl: d. about 23.0, ht. perhaps round 24.0: fragments survive from lip and upper part of body, allowing a complete profile so far, and from near the middle of the lower part of the body. The clay is buff to red, and gritty; the outside at least was coated with a finer orange-red. The outward curve of the body from the lip is not strong. On the body near the top is a ridge, next stamped circles containing apparently palmettes, then vertical flutes which did not reach below the middle of the lower part. Pl. 1e.

Cf. Dohan, *op. cit.* pl. 40.1—from grave 21 at Narce, also with stamped circles on the shoulder (the bowls, also from Narce, pl. 25.2, pl. 33.2, pl. 38.2, in some respects similar, appear to be older, as also the bowl from the Bocchoris tomb at Tarquinii, illustrated by D. Randall-Macliver, *Villanovans and Early Etruscans*, pl. 31.9).

Coarser Wares.

25. Dish: d. 18.4, ht. 8.1: half the bowl is missing. The clay varies from buff to red and dark grey, and is coarse. The surface was completely covered with a thick dark brown paint. Fig. 1.

⁴ Though the shape may go back to about 625 B.C., Atkinson's date for the two graves from Selinus which she publishes (one contained four of these kantharoi) is too high and should be corrected to early sixth century (see *JHS* 1946, 73 n. 55; and T. J. Dunbabin, *Papers, BSR* xvi, 19-23). Two more kantharoi of this group from the Katharsis grave at Rheneia, that is from Delos, are in Mykonos. From Corinth there are now four (*Corinth* vii. 1, nos. 310-311, pl. 37; *Hesperia* 1948, 227 no. D. 68, pl. 83), all from wells of the end of the seventh century. Of the two kantharoi from Motya quoted by Atkinson one seems rather to be a cup like ours. Add also several examples from Magliano published in *St. Etr.* ix,—

Poggio Volpaio grave 1 (pl. 1, third of second row: with Italo-Corinthian of the late seventh century); grave 4 (pl. 2, six examples in the last three rows: see above under no. 19); grave 5 (pl. 1, first and last of bottom row: with nine chalices); grave 6 (pl. 3, third of second row: with Italo-Corinthian of the later seventh century—it is not clear from the text whether the bucchero chalice first of the top row belongs to this group); grave 7 (pl. 3, first and last of fifth row: with two kantharoi and an Italo-Corinthian olpe); le Ficaie grave 2 (pl. 4.10: with four chalices and Italo-Corinthian hardly earlier than 600 B.C.). Fragments in *Italien BSA* xliii, 103, no. 601, pl. 45) may be from a similar kantharos.

26. Dish: slightly wider than no. 25, but similar in shape, clay, and paint: most of the rim and part of the bowl survive.

27. Dish: rather smaller than no. 25, and coarser in shape, clay, and paint: fragmentary.

28. Fragments of neck and body of largish closed pot: wall thin. The clay is buff to pink and not fine. The outside is covered with brown paint and has incised decoration—on the neck a horizontal zigzag, on the shoulder large spirals and grouped vertical lines.

29. Fragments of body and upper attachment of handle of largish closed pot. It has a thicker wall than no. 28, but seems to have been similar in shape, clay, paint, and decoration: incised lines ran down the handle.

30. 'Red pot' of which no details are known (see above p. 1).

A date for this deposit can be obtained from the Corinthian and Italo-Corinthian alabastra, the latest of which belong to the last years of the seventh century or even the beginning of the sixth, and by their condition seem to have been new when buried: no. 1, the finest piece in this collection and probably the only distant import, would by then have been a generation old. The bucchero points, though less precisely, to the same date around 600 B.C.

The group of bucchero kantharoi, to which our specimens belong,⁵ has been much discussed. P. Orsi held that they were made in Etruria, and this is probably generally accepted; but Grenier claimed them for Bologna, and K. M. T. Atkinson preferred Greek Sicily.⁶ The verdicts against Etruscan manufacture arise perhaps from an incomplete survey of the material: these kantharoi are not a separate class of bucchero and should not be considered in isolation. Our two kantharoi from Ardea (nos. 21 and 22) cannot in fabric be distinguished from the other bucchero pots found with them,⁷ except perhaps, because of its thicker walls, the chalice no. 23; and the bucchero in the Etruscan graves cited for comparison appears generally to belong to the same class. There is, indeed, in the shapes a considerable Greek influence, patent in the cups but discernible also in the tauter profiles of the small oinochoai and the amphoriskoi—Etruria was receptive of Greek influence; but for an Etruscan origin there speak the Villanovan form, the technique, and the distribution. The number of published examples of this class that are known to have been found in Etruria may, as Atkinson observes of the kantharoi, be small: such plain pots were no doubt thought not worth an illustration. It is harder to believe that some Greek factory in Sicily turned out bucchero, but sold only kantharoi in Greek markets.⁸

R. M. COOK,

C. B. R. BUTCHART.

⁵ K. M. T. Atkinson, who has seen our examples, kindly tells us that the similarity extends to the clay.

⁶ Orsi, *Not. Scav.* 1925, 181; Grenier, *Bologne Villanovienne et Étrusque*, 245, 250; Atkinson, *Papers BSR* xiv, 118. Orsi's and Atkinson's references to Ducati are, we think, mistaken.

⁷ Note also the characteristic section of the foot of both cup and kantharos.

⁸ With Atkinson's list of kantharoi (*Papers BSR* xiv 116–9: see also above n. 4) compare the lists of bucchero and other exports from Etruria compiled by P. Jacobsthal and E. Neuffer, *Préhistoire* ii, 45–8, and by G. Karo, *Ερμ.* 1937, 316–20. For Etruscan influence in Greece see besides Karo the observations of J. D. Beazley, *JHS* 1929, 40–1: note also T. J. Dunbabin, *JHS* 1944, 80.

Postscript (to p. 1, no. 1).

Mr. Dunbabin further tells us of two other alabastra by the 'Ardea painter', which H. G. G. Payne and R. J. Hopper respectively connected with the Perachora pot:—Winchester (Payne, *Neocorinthia*, 274, no. 70; pl. 16.1) and Syracuse (*ib.*, no. 71). The Winchester pot looks later than ours.

POENA LEGIS REPETUNDARUM

ACCORDING to Mommsen the various laws *de repetundis*, from the Lex Acilia of the Gracchan period to the Lex Iulia of 59 B.C., never attached any heavier political penalty to the offence than *infamia*, with consequent exclusion from the Senate, and the exile of those condemned for extortion was solely due to the difficulty of repayment.¹ Mommsen also held that the penalty of twofold restitution introduced by the Lex Acilia was abandoned by the Sullan Lex Cornelia in favour of the simple repayment established by the original Lex Calpurnia of 149 B.C. Only during the Julio-Claudian principate and later were severe penalties in the form of *relegatio* and *exilium* inflicted in special circumstances (*extra ordinem*) by the authority of the senatorial court and not by any remodelling of the Lex Iulia, which continued to inflict only the lesser penalties.

This general doctrine has caused considerable uneasiness for three reasons. First, there is an apparent contradiction between Mommsen's view and two statements of Cicero, which assert that the penalties for extortion were increased in severity by successive laws.² Second, Cicero constantly speaks in cases of extortion, whether as prosecutor or in defence, as though the *caput* of the accused were at stake.³ Third, the apparently invariable retirement of the condemned into exile, with consequent loss of citizenship—which at this time was a voluntary act and not a penalty inflicted by the State—is very remarkable if the *caput* of the offender was not affected by the sentence of the court.⁴ Yet this uneasiness led to no revolt against Mommsen's doctrine, for the good reason that most of the explicit evidence does tend to support Mommsen. With the publication of the fifth of the Augustan edicts from Cyrene, however, fresh evidence appeared concerning the penalties for extortion, and Stroux deduced from a certain phrase that, contrary to Mommsen's belief, the Lex Iulia introduced the capital penalty for this offence. But the phrase concerned is ambiguous in its context, and Stroux's view has not found general favour.

¹ The main discussion of the general history of the extortion law are: C. T. Zumpt, *De legibus iudiciisque repetundarum in Republica Romana commentationes duae* (Berlin, 1845), and *Commentatio Tertia* (Berlin, 1847); Th. Mommsen, *Römisches Strafrecht* (Leipzig, 1899) pp. 705–32. J. L. Strachan-Davidson, *Problems of the Roman Criminal Law* (Oxford, 1912), vol. II, ch. XIV, criticises Mommsen's view of the death penalty. The new evidence for the penalty of the Lex Iulia contained in the fifth Augustan edict from Cyrene is discussed by A. von Premerstein, 'Die für neuzeitliche Strafrecht Edikte des Augustus aus Kyrene', *Zeitschrift d. Sav.-Stift.*, n.s., 48, 1928, 480–516; J. Stroux and L. Wenger, 'Die Augustus-Inschrift auf dem Marktplatz von Kyrene', *Abh. der Bayer. Akad., phil. hist. Kl.*, 34, 2 Abh., 1928, 112 ff.; V. Arangio-Ruiz, 'L'Editto di Augusto ai Cirenei', *Riv. filol.*, 56, 1928, 321–64, and *ibid.* 58, 1930, 220–330; A. von Premerstein, 'Zu den kyrenaischen Edikten des Augustus', *Zeitschrift d. Sav.-Stift.*, n.s., 51, 1931, 431–

59; F. De Visscher, *Les Édits d'Auguste découverts à Cyrène* (Louvain, 1940), ch. vii. A full bibliography of the fifth edict will be found in De Visscher, *op. cit.* pp. 13–15.

The author's thanks are due to Professor H. M. Last for many helpful criticisms, and to Professor E. Fraenkel for assistance on questions of Latinity.

² Below p. 12.

³ Below p. 9 ff.

⁴ For the nature of the capital penalty in the late Republic see Strachan-Davidson, *op. cit.* ch. xv–xvi, and E. Levy, 'Die römische Kapitalstrafe', *Sitz. d. Heid. Akad. Wiss., phil. hist. Kl.*, 1930–1. Levy goes far to establish the view that the only capital sentence known to Roman law before 63 B.C. was death, though this was very seldom carried out; he further maintains, not perhaps so successfully, that before that date the term *caput*, in contexts of *damnatio*, can only refer to life proper, not to mere civil status.

The question at issue is no academic point, but vitally concerns the attitude of the whole Republican administration, optimate and popular alike, and that of Augustus too, towards the extortion law, which was after all the main sanction against provincial maladministration, and provided the only legal process that could be set in train by the action of the provincials themselves. Hence it may be worth while to examine anew the evidence for the penalties of the extortion law, and to decide whether any alternative to Mommsen's view or any modification of it is possible.

I. THE LEX CALPURNIA

There are relatively few problems connected with the penalties of the earlier laws. About the Calpurnian law of 149 B.C. the established view seems to be sound, that this law did little more than to regularise and improve the procedure which had been improvised in 171 B.C. when the first complaints of extortion from a province were brought to the notice of the Senate.⁵ A permanent court of senatorial *recuperatores* took the place of temporary commissions. The procedure continued to be modelled on that of a private recuperatorial action. It was according to Gaius a 'legis actio . . . per con-dictionem'.⁶ The later peculiarities of the extortion law partly derive from this fact. The civil process of *condictio* took no account of the circumstances in which the thing for which recovery was sought passed into the hands of the defendant. The relatively slow development of penalties for extortion can be traced to the influence of this legal conception. It is tempting to go further and to agree with Zumpt that the extortion court was not yet regarded in any way as a *iudicium publicum*, on the ground that L. Lentulus, who was censor in 147 B.C., had been one of the first victims of the Calpurnian law, evidently without suffering the *infamia* which came normally to follow condemnation in a *iudicium publicum*.⁷ Further, at this date there can have been little obvious connexion between the special activities of a senatorial committee of *recuperatores*, using the forms of civil law, and the contemporary excitements of the grand political *iudicia populi*. Likewise it was only gradually that the political possibilities of the extortion charge came to be recognised by the young hopefuls of the forum.

It remains certain that a successful action under the Calpurnian law imposed simple restitution, without *infamia*, on the defendant.⁸

II. THE LEX ACILIA

The agitations of the Gracchan period certainly led to a change in the whole conception of the extortion court. In the Lex Acilia twofold restitution is substituted for the simple repayment of sums illegally exacted.⁹ This was a departure from the spirit of

⁵ Mommsen, *op. cit.* pp. 706-8; *Staatsrecht*, II³, 224; Zumpt, *op. cit.* (1845), pp. 9-12. For the first case of extortion, Livy 43, 2.

⁶ Gaius 4, 19. One may doubt whether this really refers to the extortion law; Gaius seems rather to be referring to the original laws which introduced the new action of *condictio* as such. The difficulty raised by the presence of the process *sacramento* in the same law has not yet been solved, though it is faced by Strachan-Davidson, *op. cit.* p. 5. But it remains true that the extortion law is based on the principle of *condictio*.

⁷ Zumpt, *op. cit.* p. 13. Valerius Maximus 6, 9, 10.

⁸ For the 'poena simpli' see *Lex Acilia* 59 (Bruns, *Fontes Iuris Romani*⁷, 10).

⁹ The identification of the document Bruns *FIR*⁷ 10 with a Gracchan Lex Acilia need hardly be discussed. J. Carcopino in *Autour des Gracques* (Paris, 1928), pp. 205 ff., it may be added, never meets the point, rather forgotten by recent critics on both sides, that the document is the first law after the closely associated Lex Calpurnia and Lex Iunia; any intervening law must have been quoted, as they were, to clear up points of overlap.

condictio, and marked the beginning of the conversion of the charge into a criminal offence.¹⁰ Further, it is not improbable that Zumpt was right in arguing that the court now became recognised as a *iudicium publicum*, and that *infamia* became the usual consequence of condemnation. Mommsen did not accept this view, probably because C. Cato remained a senator and held office after condemnation under the Lex Acilia.¹¹ Zumpt's explanation of this is indeed unsatisfactory: he held that the Acilian law (l. 74) still allowed private actions as an alternative process, without time-limit, in all cases. But Cato may well have been tried, in view of the small sum involved, under the provisions of ll. 7-8, which seem to retain the forms of the Calpurnian law for cases initiated after the Kalends of September.¹²

Zumpt's opinion about *infamia* would have been better grounded on l. 28. This deals with an undefined class of persons who accepted sums within the limits allowed by the law, and indicates that those who were convicted of taking more suffered *infamia*: 'quei pecuniam ex (h.l.) capiet eum ob eam causam . . . (neive tribu mo)veto . . . neive quid ei (ob) eam rem fraudei esto'.¹³ The change in the selection of jurors would render the assimilation of the panel court to a *iudicium publicum* easy. For, whatever the exact qualification of the Gracchan jurors may have been, they were all chosen, according to contemporary language, *e plebe*, since at this time the equestrian order as such had not emerged.¹⁴

The positive evidence for the alternative view, that *infamia* was introduced only by the Lex Servilia Glaucia (c. 105 B.C.), is very weak.¹⁵ A passage in the *ad Herennium*, which shows that persons condemned for extortion were forbidden to appear at a public meeting, i.e. suffered *infamia*, proves only that *infamia* for extortion was pre-Sullan, and leaves open the 'terminus a quo'.¹⁶ Again, there is no reason to connect the fragment of the Latin law from Bantia, which included a section about *infamia* among its sanctions, with the Servilian or any other extortion law.¹⁷

It is to be noted that *infamia* was not so much a particular penalty of the law as an unvarying consequence of condemnation in this or any other *iudicium publicum*: 'quei (ioudicio puplico conde)mnatus siet quod circa eum in senatum legei non liceat'.¹⁸ Thus its introduction into the extortion law may have resulted from the court's change of status, and not from any intention of the legislator to stiffen the penalties in this respect. It is, however, worth noting that the legislator expected that some accused persons would anticipate condemnation by withdrawing into voluntary exile *before* their cases were heard.¹⁹ It is this probability, which later became very general, that is urged as a sufficient explanation for oratorical references to the *caput* of the accused in extortion

¹⁰ Mommsen, *Strafrecht*, pp. 728-9.

¹¹ Zumpt, *op. cit.* (1845) pp. 13, 26; Mommsen, *op. cit.* p. 729. For Cato see Velleius, ii. 8, 1.

cases. The earliest instance is the fiery language used by M. Antonius in his indictment of the Lex Acilia in 106 B.C.²⁰

III. THE LEX SERVILIA

It seems surprising that at the time when the Lex Servilia was passed, in the bitterest years of the popular agitation of the post-Gracchan period, when the *populares* were legislating almost annually for fresh capital charges in which to entangle the aristocracy, they apparently missed the opportunity of making the penalty of the extortion law capital.^{20A} Three points may be urged about this. First, that the Lex Servilia Glaucia was mainly concerned with recovering lost ground, by re-establishing the non-senatorial juries displaced by the Lex Servilia Caepionis.²¹ Second, that the popular leaders were less concerned with the interests of the allies than with those of the *plebs Romana*; it sufficed for them that condemnation effectively removed a man from public life. Third, that if the penalties were not increased, the procedure of the law was made more strict by the introduction of *comperendinatio*, aimed against a legal filibuster,²² and the scope of the law was widened by the provision in certain cases for the recovery of monies from third parties under the clause 'quo ea pecunia pervenerit'.²³ There can be no doubt that apart from its penalties the Servilian law was in Cicero's phrase 'durior', harder, than its predecessor.²⁴

IV. THE LEX CORNELIA

The doctrine of Mommsen, followed by Strachan-Davidson, is that Sulla's law moderated the penalties of the Acilio-Servilian system by restoring simple restitution in place of the *poena dupli*, and by abolishing *infamia*.²⁵ This is a retrocession from the view of Zumpt, who saw clearly that Sulla's legislation affecting the powers of magistrates was not mere reaction. The intention of the so-called Sullan constitution could not be better summarised than by Zumpt's brief remarks, published in 1845, particularly: 'multis legibus hoc egit ut magistratum . . . libidinem et avaritiam vinciret metu poenae ac iudiciorum'.²⁶ It is rather a stiffening than a moderating of penalties that should be expected of Sulla, and in one penalty at least this may well have been done. For Zumpt's argument, based on the evidence of the Verrines, that the financial penalty was increased to two-and-a-half-fold, was not disproved by Mommsen but merely set aside.²⁷ In the *Divinatio* Cicero claims 100,000,000 sesterces, while at the end of his first *actio* he sets the sum actually stolen as 40,000,000 sesterces.²⁸ The difference between the two

²⁰ Cicero, *de Oratore* 1, 225: 'eripite nos ex faucibus eorum quorum crudelitas nisi nostro sanguine non potest expleri'; cf. Strachan-Davidson, *op. cit.* p. 80. Cicero does not seem to have taken this in a technical sense: 'ne iudicio iniquo exsorbeatur sanguis tuus, quod sapienti negant accidere posse' is his gloss.

^{20A} Cicero says that M. Aquilius, tried under the Servilian law in 98 B.C., was 'in civitate retinendus'; in references to the actual speech of Antonius in defence there is no hint of a capital penalty, *de Or.* ii, 124 and 194. In ii in *Verr.* 5, 3 he is only 'ad iudicium crudelitatem servatus'. Rutilius Rufus, another victim, retired into exile after suffering only a monetary penalty: Cassius Dio, *fr.* 97.

²¹ For the date see H. M. Last in *CAH* ix, 163; J. P. Balsdon, 'History of the Extortion Court at Rome, 123-70 B.C.', *Papers of the British School at Rome*, 1938, 106-14.

²⁶ Zumpt, *op. cit.* p. 36.

²⁷ *Ibid.* pp. 41-1. Mommsen makes no reference to Zumpt's point in *Strafrecht*, 705-32.

²⁸ *Div. in Caec.* 19; i in *Verr.* 56.

claims is indicated by the terms 'ex lege repeto' for the first and 'contra leges abstulisse' for the second.

That *infamia* still attached to condemnation is strongly suggested by a passage in the second *actio*, where Cicero enlarges upon the enormity of Verres continuing to sit in the Senate and on juries if he were acquitted.²⁹ Cicero can hardly mean, as Strachan-Davidson suggests,³⁰ simply that Verres would probably go into voluntary exile if condemned. The underlying reference is to the exclusion from Senate and jury of those condemned in a *iudicium publicum*. The evidence for Mommsen's view consists of a short statement in Suetonius' life of Iulius: 'repetundarum convictos etiam ordine senatorio movit'.³¹ He took this to refer to the Lex Iulia, and to mean that it restored the *infamia* abolished by the Lex Cornelia. But there is no mention of the Julian or any other law in the context, which is dealing not with legislation but with jurisdiction. Zumpt thought that the reference was to civil actions,³² such as, one might add, Caesar's own juvenile suit against C. Antonius.³³ Caesar may well have taken censorial action, such as the censors of 70 B.C. took against this very Antonius, against those who lost such suits: 'movit'.

In any case it is not easy to understand how Sulla could, or why he should, have restricted in this one instance the application of a general principle of public law. The rule was firmly rooted in tradition, and was certainly not invented by Gracchan or post-Gracchan legislators. It would agree better with the other legislation of Sulla to argue that he was so far from abolishing *infamia* for extortion that he introduced the capital penalty in this, as in the rest of his penal legislation, in the form *de eius capite quaerito*.³⁴ There is a considerable body of Ciceronian evidence to support such a view, though at present it is fashionable to dismiss all references in Cicero's speeches to *periculum capitis* in extortion cases as 'rhetorical', or else with the caution of Strachan-Davidson to explain them as referring to voluntary exile assumed in fear of further charges.³⁵ But the latter alternative does not meet the case, because exile was equally the means of avoiding a direct capital sentence. If no factual evidence can be found against the capital penalty, then the oratorical evidence may be strong enough to prove its existence.

In several passages of the Second Action Cicero speaks explicitly of 'capitis ac fortunarum tuarum periculum', which Verres risked by his spoiliations.³⁶ In the first of these there is a seeming reference to a threefold classification of the penalties of the law: 'tantam tuam infamiam tantum capitis tui fortunarumque tuarum periculum neglexisse'. This implies loss of civil standing, loss of citizenship or life, and loss of money.³⁷ If the fine and the infamy were penalties, why not the *caput* also? When it is said of the unfortunate Dexo that 'non ex litibus aestimatis tuis pecuniam domum sed ex tua calamitate . . . solacium vult aliquod reportare', something more than the fine is meant by *calamitas*.³⁸ A clearer reference to the possibility of a capital penalty occurs where the presiding praetor interrupted the trial: 'etenim verebatur ne populus Romanus

²⁹ ii in *Verr.* 2, 76; cf. 3, 52.

³⁵ Cf. De Visscher, *op. cit.* p. 171.

³⁶ ii, 3: 52, 129, 133, 134.

³⁷ For *fortuna*, the plural, as property see *Thesaurus* L. L. s.v. col. 1180.

³⁸ ii in *Verr.* 5, 128. For *calamitas* in a similar context see *pro Caecina* 100: 'quia volunt poenam aliquam subterfugere aut calamitatem eo solum vertunt . . . cum . . . vincula neces ignominiasque vitant'.

ab isto eas poenas vi repetisse videretur quas veritus esset ne iste legibus ac vestro iudicio non esset persoluturus'.³⁹ And in his peroration Cicero remarks 'reliquum iudicium iam non . . . de istius vita quae damnata est sed de iudicibus . . . futurum est'.⁴⁰

All this should add up to the conclusion that the penalty of the law was capital. Though it may be urged that 'calamitas' and 'vita damnata' are vague or non-technical phrases, intended to avoid connecting the judicial verdict with judicial *capitis damnatio*, the phrases in which 'caput', 'fama' or 'infamia', and 'fortuna' are conjoined are less ambiguous. This conjunction is found in other extortion contexts with the appearance of a technical term. Though absent from the First Action it occurs in the *Divinatio*: 'illos qui accusantur de capite ac fortunis suis pertimescere',⁴¹ in the incomplete *pro Fonteio*: 'fac omnis . . . pepercisse huius capiti consuluisse famae',⁴² and in the *pro Flacco*: 'principes posse spoliari omnibus fortunis atque civitate expelli'.⁴³ Elsewhere, in contexts that do not concern extortion, the conjunction is used with certain reference to capital punishment, as in the *pro Quintio* and in a letter, where Cicero says of Laenius Flaccus, who protected him in 58 B.C. despite the threats of the Clodian law: 'periculum fortunarum et capitis sui prae mea salute neglexit'.⁴⁴

The implication in the passages referring to the Lex Cornelia is that by direct sentence of law a man condemned for extortion suffered both in his civil status and in his property. Why else should withdrawal from Italy be so very common in such cases after 81 B.C.? The usual explanation that by this means it was easier to save a part of one's property, though slightly supported by a passage in Suetonius,⁴⁵ does not give a complete answer, because it is apparent from a statement in Plutarch's *Cicero* that *litis aestimatio*, though heavy, seldom corresponded to the exactions which had taken place.⁴⁶ As Cicero himself said, the jurors paid less attention to the 'aestimatio' than to the case itself.⁴⁷ If then Plutarch and Mommsen are both right, Verres might have paid up and still have remained a senator.

Up to this point then the evidence tends certainly towards *infamia* and possibly towards *capitis damnatio* as penalties of the Cornelian law. Two passages, however, speak against the capital penalty. The first is a section of the *pro Cluentio*, obscure both in text and meaning, to which sufficient attention has not yet been given.⁴⁸ Cicero is discussing the 'litis aestimatio' which followed the condemnation of Septimius Scaevola for extortion and explaining general principles. His point is that damages were often sought on claims which could also form the bases of capital charges under other laws, such as that of *maiestas*, but that the reception of these claims at the 'litis aestimatio' was not treated as a *praeiudicium* later. He remarks that many men were acquitted of treason

³⁹ *ii in Verr.* 5, 163.

⁴⁰ *Ibid.* 5, 177. The passage in 3, 152, where Metellus refuses to accept a civil action against a third party 'quod per vim aut metum abstulerit', because 'praeiudicium se de capite C. Verris per hoc iudicium nolle fieri', has been used by Stroux (*art. cit.* pp. 115 f.) as evidence for the capital penalty, but the reference could equally well be to the Lex Plautia de vi (*cf.* De Visscher, *op. cit.* p. 170), and perhaps better, because, one might add, the extortion law was not concerned with circumstances such as *vis* or *metus*. Only Roman citizens were involved.

⁴¹ *Div. in Caec.* 71.

⁴² *pro Fonteio* 3.

⁴³ *pro Flacco* 96, after a vaguer reference to 'sanguis' in 95.

⁴⁴ *ad Fam.* 14, 4, 2; *pro Quintio* 8, 26, 27, 94.

⁴⁵ Suet., *Div. Iul.* 42: 'locupletes eo facilius scelere se obligarent quod integris patrimoniis exulabant'. The reference is primarily to murder.

⁴⁶ Plut., *Cicero* 8; Zumpt, *op. cit.* p. 50.

⁴⁷ Cic. *pro Cluentio* 116: 'in litibus aestimandis fere iudices . . . quod se perfunctos iam esse arbitrantur cum de reo iudicantur neglegentius attendunt cetera'.

⁴⁸ *Ibid.* 115-16.

when they had already been condemned for extortion and 'estimated' for *lites maiestatis*.⁴⁹ This can only mean 'because they took money for doing something against the treason law'. Likewise in the particular case of Scaevola an item of taking bribes as a juror was estimated against him, and yet he was not later accused under the law against judicial corruption. The assumption behind the whole of this passage is that under the Lex Cornelia those who had been condemned for extortion might still remain as full citizens and be the subject of capital charges on other accounts: 'si rei iudicatae pondus habuisset (lis aestimata), ille postea vel isdem vel aliis inimicis reus hac ipsa lege (the law 'inter sicarios') factus esset'.

Though the passage contains several difficulties of text and translation, the last sentence, just quoted, is free from serious obscurity, and certainly seems to indicate that the penalty of the Cornelian law was less than capital. It is, however, preceded by the statement, referring to the charge of bribery against Scaevola: 'omni contentione pugnatum est uti lis haec capitis aestimaretur'. 'Lis capitis' is used elsewhere in the same passage apparently in the sense of 'lis capitalis', meaning a *lis* on which a capital charge could also be brought,⁵⁰ just as 'lis maiestatis' is used in the same context to mean a suit which could also form the object of a treason charge. At first sight a possible alternative interpretation would be that juries could assess certain charges as capital under the Cornelian law with the full consequences of a capital condemnation. But this seems to be contrary to what is known of the 'litis aestimatio' down to the Lex Iulia, a process solely concerned with *pecunia*.⁵¹ Also, it is hardly probable that juries would listen 'neglegentius', as Cicero says in this very passage, at the moment when the penalty was to be severely increased; moreover, it is hard to see why a man already condemned 'capitis' should stand further trial, as Cicero says they did.

A second possibility is that the jurors could explicitly qualify the acts of the accused as deserving the capital penalty without this having any practical consequences, i.e. 'rei iudicatae pondus non habuit'. This interpretation has, in effect, been urged, for reasons of syntax, by Peterson, in answer to Reid's objection to the Latinity of 'lis capitis', but it seems to be contrary to the trend of the passage as a whole.⁵² Rather should one say that the jury expressed such a view when they tacked on to the verdict of 'fecisse videri' an *aestimatio* that X should pay so much because, for example, he had taken money, as Scaevola did, 'quo quis iudicio circumveniretur'.

A second passage in Cicero that tells against the capital penalty comes from the fragments of the *in Toga Candida*.⁵³ To explain away the acquittal of Catiline on an extortion charge he remarks: 'o miser qui non sentias illo iudicio te non absolutum verum ad aliquod severius iudicium ac *maius supplicium* reservatum'. This remark would be pointless at this moment of Catiline's career, long before the 'conspiracy' came to light, if the penalty of the extortion law was capital, though the passage can hardly be

⁴⁹ Cic. *pro Cluentio* 116: 'itaque et maiestatis absoluti sunt permulti, quibus damnatis de pecuniis repetundis lites maiestatis essent aestimatae'. Some manuscripts omit the second 'maiestatis'. For similar interpretations see W. Peterson, *M. Tulli Ciceronis pro Cluentio Oratio* (London, 1899 etc.) 197-8, and Strachan-Davidson, *op. cit.* p. 9, but the full implication of the passage was missed by them.

⁵⁰ 'Si qua in eum lis capitis inlata est non admittunt (iudices)',—whether one accepts Postgate's excellent

correction 'remittunt' is for present purposes immaterial.
⁵¹ ii in *Verr.* i. 95-100; *pro Rab. Post.* 8-11.

⁵² Peterson, *op. cit.* pp. 197-8, quoting apparently a private communication of Dr. Reid.

⁵³ Asconius 78. For a parallel passage cf. Caelius in Cic. *ad. fam.* 8, 2, 1, of a person acquitted on an unknown charge in 51 B.C., possibly extortion: 'itaque relictus legi Liciniae maiore esse periculo videtur'.

used to support Mommsen's view by those who reject the Ciceronian evidence as rhetorical. The particular value of the passage is that it suggests that down to 64 B.C., five years before the Lex Iulia, there had been no modification of the penalties of the Cornelian law.

This review of the evidence seems to lead to the conclusion that the penalty of the law was not capital in any form, and that Strachan-Davidson was right in so far as most *condemnati* went into voluntary exile after a '*lis capitis aestimata*' in order to avoid further prosecution, although some like Scaevola successfully stood their ground. Mommsen seems to be wrong in suggesting that the cause of exile was the enormity of the fines, and that the guilty did not suffer *infamia*. Those who had been condemned without suffering a '*lis capitis*' might still prefer to withdraw into exile, either out of indignation, like Rutilius Rufus, because they had been condemned on technical grounds by political spite, or even out of shame if the offence was flagrant.^{53a} What precisely Cicero means by his use of the term *caput* in his extortion speeches, whether it is death as Levy maintains, or loss of civil rights as his predecessors held, is hard to determine, but he is not referring to the *technical* penalty of the Cornelian law.

V. THE LEX IULIA

The evidence concerning Caesar's consular law *de rebus repetundis* comes from five different periods. It consists of (1) the contemporary evidence of Cicero; (2) the Augustan s.c. Calvisianum of 4 B.C.; (3) Julio-Claudian verdicts recorded by Tacitus in his *Annals* and *Histories*; (4) detailed description of cases in the *Letters* of the Younger Pliny under Trajan; and (5) extracts from jurists of the second and later centuries in the *Digest*.

All the post-Augustan evidence is remarkable in that it suggests that the normal punishment for extortion was less than capital, and yet shows that capital punishment, in its appropriate form, could in some circumstances be exacted. Since this may be due to a later stiffening of the law, a separate chronological handling of the different types of evidence is desirable. It is particularly desirable to establish what the penalty was before the death of Augustus, and whether the Ciceronian evidence shows that the original Lex Iulia went beyond the Lex Cornelia in the severity of its penalties.

Ciceronian Evidence. In a well-known passage of the *de Officiis*,⁵⁴ composed long after the passing of the Lex Iulia, Cicero wrote with reference to the original Lex Calpurnia: 'at vero postea tot leges et proximae quaeque duriores; tot rei tot damnati . . . ut imbecillitate aliorum . . . valeamus'. It has been seen that, mainly in respect of penalties, each extortion law down to and including the Cornelian law was in fact 'durior'. Does the same hold for the Lex Iulia, which Cicero ought at the time of writing to have had in mind as the latest of the *proximae*? In a passage of the *pro Rabirio Postumo* he seems to affirm so: 'iubet lex Iulia persequi ab eis ad quos ea pecunia . . . pervenerit. Si est hoc novum in lege Iulia, sicuti multa sunt severius scripta quam in antiquis legibus et sanctius . . .'.⁵⁵ This is usually taken in the same sense as the passage from *de Officiis*: the penalties were made more severe. Yet the words 'severius scripta et sanctius' need not refer to penalties so much as to the general strictness and explicitness of the law as a

^{53a} Cf. *pro Caecina* 100, quoted n. 38 above.

⁵⁴ *de Officiis* 2, 75.

⁵⁵ *pro Rab. Post.* 8.

whole, which, as he shows elsewhere, was more carefully drafted and cast its net more widely than the Cornelian law. A severe law is not necessarily one with a severe penalty; in the *Verrines* the Lex Acilia is described as 'mollior' than the Servilian law, because the Servilian procedure was more exacting, though its penalty was no stricter.⁵⁶ The reference in *sancire* and *sanctius* is to the detailed act of forbidding rather than to the ferocity of the penalty.⁵⁷ Cicero means that more acts were specifically forbidden in the Julian law; one may compare a passage of the *in Pisonem* where he says that there were a number of actions 'quorum nihil est quod non sit lege Iulia ne fieri liceat sanctum diligenter'.⁵⁸

So far the evidence is neutral. Elsewhere in the *pro Rabirio Postumo* Cicero refers to the possible punishment of Postumus, who was being prosecuted under the clause 'quo ea pecunia pervenerit' for sharing the gains of the already condemned Gabinius. In 11 he says of the jurors: 'si enim quod liceat quaeritis potestis tollere e civitate quem vultis; tabella est quae dat potestatem'. Thus Rabirius would disappear not by voluntary exile but by the act of the jurors. This is more explicit than the language used by Cicero about the penalties of the Cornelian law, but can hardly alone prove the capital penalty. The phrase 'tollere e civitate' would, however, correctly express the effect of a verdict of guilty under a law which included express provision for the pronouncement of the interdiction *aqua et igni*; the first law which made this incumbent was apparently the *lex Tullia de ambitu* of 63 B.C.⁵⁹ Elsewhere Cicero twice states that Rabirius would suffer more than a pecuniary penalty. Since he was already financially ruined, and maintained *in foro* only by Caesar's generosity, he could now lose nothing 'praeter hoc simulacrum pristinae dignitatis', i.e. his equestrian status; and again 'nomen equitis Romani et usuram huius lucis et vestrum conspectum ne eripiat'.⁶⁰ It is hard to see why Rabirius should have gone into voluntary exile if he was already a ruined man, and as a private citizen had no 'lis capitis' to fear. It follows that at the least Rabirius was due to suffer *infamia* if condemned. This is all the more surprising in view of the fact that the attitude of the law under this heading was markedly 'recuperatory'. If the principal offender had paid in full, no action could have lain against Rabirius, however much he had received.⁶¹ There is, then, a presumption that the punishment of principals exceeded the *infamia* which attached even to receivers.

Another peculiarity of the Julian law emerges from two passages of the *in Pisonem*, in which Cicero lists certain acts that were forbidden by the law.⁶² Some of these acts have to do with certain permissible requisitions which were more closely defined than hitherto (e.g. 'numerus navium', 'rationem exacti frumenti'). Infringement of these clauses could clearly be met by fines alone. But there are also included offences for which no financial equivalent is easily discernible, such as the infringement of the freedom of *populi liberi*, and a series of actions which were already forbidden by the Lex Cornelia Maiestatis: 'exire de provincia, educere exercitum, bellum sua sponte

⁵⁶ *ii in Verr.* 1, 26. Cf. Baldson, *art. cit.* p. 102.

⁵⁷ Cf. Forcellini, *Totius Latinitatis Lexicon*, s.v. 'sancire' p. 323 and 'sanctus' p. 325.

⁵⁸ *in Pisonem* 90.

⁵⁹ Levy, *op. cit.* pp. 30-1.

⁶⁰ *pro Rab. Post.* 41 and 48.

⁶¹ *Ibid.* 37. Cf. Mommsen, *op. cit.* pp. 731-2.

⁶² *in Pisonem* 50 and 91; also *de Prov. Cons.* 7.

Mommsen, *op. cit.* pp. 719-20, gives the facts but does not face the difficulty, although he insists that the *condictio* principle implied that the *poena* was estimated in cash. He adds that the ownership of ships was forbidden to senators by the Cornelian law, but the 'antiquae leges et mortuae quae verant' quoted by Cicero need not be extortion laws.

gerere, in regnum iniussu . . . senatus accedere'. It may be argued that the Lex Iulia allowed action under these heads only when money had been taken in such a connexion, just as action was possible under the extortion law for the offence of judicial corruption as well as under the law 'inter sicarios'.⁶³ Yet that is not what Cicero says, and at least it is apparent that the extortion law had passed beyond the early conception of *repetundae* as merely an action for recovery. The law is now taking cognisance of the quality of acts. Cicero says about *aurum coronarium*, 'lex (Iulia) . . . et decerni et te accipere vetabat nisi decreto triumpho', after remarking that Piso had long hesitated to accept an offer of such gold.⁶⁴ This implies that it was an offence for a governor to allow the local councils to vote such monies even if they were not accepted,—hardly a 'recuperatory' offence.

If the Lex Iulia included offences of this kind, then either its penalty in such cases was a fixed fine or else it was the same as that of the treason law, i.e. capital. Taken together the Ciceronian passages indicate that the original form of the Julian law made more elaborate provision for penalties than did earlier laws, just as it defined offences in more detail. This is supported also by what is known of the length of the law. Its hundred and first head was concerned with topics which in the Lex Acilia were reached in the fifty-fifth line ('de reo condemnando').⁶⁵ Hence it is intrinsically improbable that the penalties were dismissed as briefly as in the Acilian section 'de litibus aestimandis'. But in what manner the penalties were defined cannot be decided until the evidence of the imperial period has been considered.

The Senatusconsultum Calvisianum. Before the publication of the fifth Augustan edict found at Cyrene and the s.c. attached to it, it was apparent from Tacitus and Pliny the Younger that in the Principate a new procedure existed for dealing with extortion cases, but the exact relation of the 'recuperatores' of Tacitus and the 'iudices dati' of Pliny to the older procedure was not certain.⁶⁶ It was also apparent that certain other extortion cases were heard by a full session of the Senate, Mommsen's consular-senatorial court. The publication of the s.c. of 4 B.C. at first seemed to make all things clear.⁶⁷ A new procedure was established by which small senatorial juries of five men were appointed to investigate cases in which the charge was only of *pecunia capta*. These juries were not to deal with more serious charges involving capital punishment. It seemed easy to identify the jurors of the s.c. with those of Tacitus and Pliny, and to assume that the consular-senatorial court took the place of the old *iudicium publicum* for the other class of offences. It also seemed to follow that the Lex Iulia, to which this s.c. was an adjunct, provided the capital penalty for at least some, if not all, offences of extortion. But systematic examination of the document led to the discovery of difficulties and objections. A formidable controversy arose between von Premerstein and Stroux as protagonists, and the dispute still rages. Unfortunately it is particularly concerned with interpretation of the chief sentence relating to penalties. Recently Professor De Visscher has tried to effect a certain reconciliation between the main views, partly by relating the function of the Senate in the s.c. more clearly to the general function of the Senate in foreign affairs, partly by undermining certain assumptions of either party.

Some things are not in dispute. It has emerged that the s.c. is concerned with the

⁶⁴ in *Pisonem* 90.

⁶⁵ *Cic. ad Fam.* 8, 8, 3.

⁶⁶ Cf. Mommsen, *op. cit.* p. 726.

⁶⁷ For bibliography see n. 1. The text here followed is that of De Visscher. The s.c. is now conveniently available in *SEG* ix 8.

reform only of procedure, not of the penalties.⁶⁸ Whatever the penalties of the Lex Iulia were, they were not altered by the s.c.⁶⁹ Again, the shortened procedure set up by the s.c. provided for the singlefold repayment of monies extorted against the law, took no account of any other circumstance, and excluded any form of the capital penalty. But, as De Visscher rightly sees, such condemnation did not preclude *infamia*.⁷⁰ The document then agrees with the later history of the extortion law, in that those condemned by *recuperatores* in the Julio-Claudian and Trajanic period suffered *infamia* and consequent exclusion from the Senate, whatever the exact relation between the later *recuperatores* and the jurors of the s.c. may have been (below p. 23).

So much is certain. What is still at issue is whether the s.c. provided for, or left open, other forms of prosecution for extortion, with heavier penalties, before the old *quaestio*. The debate centres round the opening words of the sentence with which the s.c., after a historical survey of the extortion law, introduces the new procedure: ἐάν τινες τῶν συμμάχων . . . χρήματα δημοσίᾳ ἢ ἰδίᾳπραχθέντες ἀπαιτεῖν βουλευθῶσιν χωρὶς τοῦ κεφαλῆς εὐθύνειν τὸν εἰληφότα—then they are to approach a magistrate who will secure them a hearing in the Senate.⁷¹ The problem is—exactly what is the bearing of the phrase introduced by χωρὶς? Stroux, taking it as qualifying βουλευθῶσιν ἀπαιτεῖν, concluded that the Lex Iulia provided for a capital penalty, and that this s.c. enabled the provincials themselves to choose whether they wished to prosecute by the new procedure, which provided no punishment beyond repayment, or to bring their case before a *iudicium publicum*, which provided for repayment plus the capital penalty.⁷² Von Premierstein, holding Mommsen's doctrine that the Julian law did not know the capital penalty, took the limiting clause less closely with its context, and referred it to criminal charges not covered by the extortion law which provincials might wish to bring forward. Such charges were excluded from the scope of the special juries and were referred to the relevant *quaestio*.⁷³

De Visscher has pounced upon the peculiarity common to both these views—that whether the other charges were criminal extortion or murder and treason, they were withheld from the Senate's competence and referred directly to the *quaestiones*.⁷⁴ He rightly points out that this is contrary to all that is known about the function of the Senate in foreign affairs. If emissaries from allied or subject states brought complaints to Rome, the routine arrangement was for the Senate to discuss them and to make some recommendation to the consuls in the matter.⁷⁵ Further, the s.c. provides for a preliminary hearing in the full Senate before the special jury is assigned.⁷⁶ The sensible explanation of this is that the Senate was to sift the provincial complaints—not the evidence behind the complaints, and, if there was more than extortion in them, to make appropriate recommendations. The great change in procedure, with respect to the capital charges, implied both by Stroux and von Premierstein, could not, De Visscher argues, have been accomplished by four obscure words. But he agrees with von Premierstein and Mommsen about the penalty of the Julian law, and hence takes a similar view to von Premierstein's about the 'capital charges', but limits them to charges,

⁷⁶ *L.* 104-5. ὡς ἂν ἐν τῇ συνκλήτῳ αἰτίας ἐπιφέρουσιν κτλ.

closely associated with extortion, in a matter that might be a capital offence under another law. Such charges he thinks were excluded on the principle that no recuperatory action could lie if it established a *praeiudicium capitis* about a future criminal charge.⁷⁷ De Visscher seems hereby to have entangled himself in contradictions. Such charges certainly could lie under the longer process before a *iudicium publicum*, and were not, according to the evidence of the *pro Cluentio* passage, which De Visscher seems not to have used, held to constitute a *praeiudicium*.⁷⁸ Why then should they constitute one under the short process? Again, the evidence about *praeiudicia* quoted by De Visscher from Cicero's *de Inventione* refers only to civil actions.⁷⁹ Hence De Visscher is really accepting at this point Stroux's view of the short process as merely recuperatory which he elsewhere rebuts, holding that the penalties of the Lex Iulia, whatever they were, applied equally to the short process and to the long.⁸⁰

De Visscher seems to come very close to the truth and yet to miss it. Hence a slightly different interpretation may be offered, based on De Visscher's own point that the s.c. is concerned solely with extortion matters, and Stroux's point, which is really grammatical, that the *χωρίς* clause makes clear sense as qualifying ἀπαρτεῖν, but is very obscure when taken generally and loosely in von Premerstein's manner. The same negative implication recurs, with direct reference to extortion, in ll. 130-1, where the duties of jurors are defined: οἱ . . . κριταὶ περὶ τούτων μόνον ἀκούεσσαν καὶ διαγινωσκέσσαν περὶ ὧν ἂν τις εὐθύνηται . . . νενοσφισμένος. Here the reference can only be to charges which could be brought under the scope of the extortion law. Cicero might make his audience *listen* to creepy stories about the violence of Verres, but he could not get *sentence given* on these counts under the Cornelian law. The implication of καὶ διαγινωσκέσσαν is that, under the Julian law, charges other than extortion, or charges of extortion in aggravating circumstances, could be brought within the scope of the sentence. It is these charges that are excluded as much by ll. 130-1 as by the *χωρίς* clause; the object of the senatorial hearing is, as De Visscher says, to decide (as was done in later days), by examining not the evidence but the charges, whether 'jurors should be given', or whether the case must after all be referred for trial to the *quaestio*, or as took place later in the Principate, to a full session of the Senate.

One difficulty persists even in the simplified version of De Visscher. How could provincials indict an ex-governor on charges not covered by the extortion law? This was the sole form of redress created for provincials under the Republic.⁸¹ Citizens might indict senators for political offences such as *maiestas* or *peculatus* or for such crimes as *furtum* or *vis*, and might possibly bring civil actions in certain circumstances. But these courses were not open to the provincial. The basic reason is the unlimited nature of the *imperium* of a magistrate.⁸² The extortion laws limited the holder of *imperium* in just one

⁷⁷ De Visscher, *op. cit.* pp. 175-7. Hence, *ibid.* p. 203, he regards the trial of Marius Priscus for judicial corruption as being under the Lex Cornelia 'inter sicarios', not the extortion law.

⁷⁸ Above p. 10 f.

⁷⁹ *De Inventione* 2, 59-60: 'non enim oportet in recuperatorio iudicio eius malefici de quo inter sicarios quaeritur praeiudicium fieri'.

⁸⁰ De Visscher, *op. cit.* pp. 178 f.

⁸¹ The question has been discussed in part by W. W. Buckland, 'Civil Proceedings against Ex-magistrates in

the Republic', *JRS* 27, 37 ff. He holds that at most even citizens could only bring a civil action in respect of things done by a magistrate in his private capacity. A comparison of the stories of abuse of *imperium* in Livy 42, 1, 7-11, before the Lex Calpurnia, and in Aulus Gellius, *Noctes Atticae* X, 3, afterwards, is instructive. Actions *de vi publica* did not concern provincials directly, *Dig.* 48, 6.

⁸² For the inadequate checks on consular and praetorian *imperium* in general see Mommsen, *Staatsrecht*, I³ 705 f., 209 ff.

respect in relation to the persons and property of provincials—‘cogere capere conciliare pecuniam’ was forbidden. It is far from clear how even the most reprehensible of murders, judicial or otherwise, could fail to be covered by the nature of *imperium*. Hence even at a late date and even in the realm of extortion the servants of a proconsul could plead that they were not responsible for their own acts when under the orders of the holder of *imperium*: ‘esse . . . se provinciales et ad omne proconsulum imperium metu cogi’.⁸³ Hence it is difficult to understand, on von Premerstein’s interpretation, what the ‘other charges’ could be about.

So then, whatever the offences were that were excluded by the s.c., they were concerned with extortion or were covered by the extortion law. If the principle is accepted that the s.c. is solely procedural and did not alter the sanctions of the law, it should follow that the Lex Iulia distinguished between simple extortion and extortion in aggravating circumstances, i.e. with violence. For the former it provided no more than the *infamia* inherent in condemnation by a *iudicium publicum*, but for the latter it added the capital penalty. Strictly it should also follow, from the principle, that the simple restitution of the s.c. was included in the Julian law, either for all forms or for the more moderate forms of extortion.⁸⁴ If so, then the Lex Iulia was in this respect milder than the Cornelian law, and provided a scale of financial penalties corresponding to a scale of political penalties, adjusting the penalty to the enormity of the offence. But it is simpler to allow that the s.c. did in fact change the rate of restitution, which on the principles of *recuperatio* and *condictio* was not exactly regarded as a penalty. In either case the later juristic generalisation ‘ex lege repetundarum puniuntur prout admiserint’ finds its origin in the Julian law (below p. 22).

The Julio-Claudian Period. In the prosecutions recorded by Tacitus there is some difficulty in distinguishing plain extortion cases from those in which a man was also accused of *maiestas*.⁸⁵ But comparison of those cases which are clear shows that there is a certain complexity in the extortion law as it then was, both in the charges brought and in the penalties inflicted. It also emerges that the severer penalties were inflicted for extortion in aggravating circumstances. Plain taking of monies was punished by repayment and *infamia* with expulsion from the Senate, but where *saevitia* was proved penalties ranging from expulsion from Italy to complete *exilium* were exacted.

The first case recorded in Tacitus of extortion with *saevitia* punished by exile is that of C. Silanus in A.D. 22.⁸⁶ The case was heard in the Senate and the proposal of L. Piso was accepted: ‘aqua et igni interdicendum . . . ipsumque in insulam relegandum’, though Tiberius changed the particular island and accepted a rider that modified the full financial consequences of the condemnation. In A.D. 23 Lucilius Capito, an equestrian procurator, was accused of some form of extortion with violence: ‘si vim praetoris usurpasset manibusque militum usus foret, spreta in eo mandata sua’.⁸⁷ His sentence is

⁸³ Pliny, *Ep.* 3, 9, 15.

⁸⁴ Cf. De Visscher, *op. cit.* p. 183.

⁸⁵ Zumpt, *op. cit.* (1847), pp. 38–40 lists all the Tacitean cases which he recognised as extortion. Those under Tiberius are discussed briefly by R. S. Rogers, *Criminal Trials and Criminal Investigations under Tiberius* (Middletown, Connecticut, 1935).

⁸⁶ Tac. *Ann.* 3, 66–69. Despite Tacitus’ hint of *maiestas* charges, the precedent of Volesus Messalla (below p. 19),

the cross-reference in 4, 15, and Tacitus’ own statement ‘nec dubium habebatur saevitiae captarumque pecuniarum teneri reum’, all combine to show that only the extortion charge was pressed, despite the torture of servile witnesses. Cf. Rogers, *op. cit.* pp. 66–70.; contra, De Visscher, *op. cit.* p. 190, n. 3.

⁸⁷ Tac. *Ann.* 4, 15. Mommsen, *Strafrecht*, 713, n. 1; Rogers, *op. cit.* p. 73.

not known. In A.D. 56 Clodius Quirinalis had similarly abused his position as head of the Ravennate fleet: 'Italiam luxuria saevitiaque adflictaisset'. He anticipated a capital sentence by suicide.⁸⁸ In neither of these two cases does Tacitus make it quite clear whether *pecunia capta* was also concerned. But in the case of Sulpicius Camerinus, acquitted in 58, the distinction is very clear: 'saevitiae magis quam captarum pecuniarum crimina obicientes'.⁸⁹ In 60 Vibius Secundus, a procurator of Mauretania, who was condemned for extortion and expelled from Italy, is said to have escaped a heavier penalty by Court influence.⁹⁰ Finally, in 70 there is an exact parallel to the case of C. Silanus, the condemnation of Antonius Flamma: 'damnatur lege repetundarum et exilio ob saevitiam'.⁹¹ There may be added a case where the charge was not *saevitia* but acceptance of a bribe *ob rem indicandam*; for this P. Suillius was expelled from Italy.⁹²

Over against these cases in which some form of capital penalty is discernible stand others in which the punishment is limited at most to repayment and *infamia*. For Granus Marcellus, who was certainly tried by the short process of the s.c. Calvisianum in A.D. 15, there is no record of the penalty.⁹³ But Cadius Rufus in 49, Cossutianus Capito in 57, and Pedius Blaesus in 59, all lost no more than their seats in the Senate: they were all restored later through Court favour.⁹⁴ An unknown consular also suffered no more than *infamia*.⁹⁵ Tacitus in the *Histories* regards this penalty as normal: 'redditus . . . senatorius locus; repetundarum criminibus sub Claudio . . . ceciderant'.⁹⁶

The prevailing view about these cases is that the penalties above *infamia* were determined not by the Julian law but by the *auctoritas* of the Senate, and that they represent the development of the senatorial court as a separate source of law.⁹⁷ The objection to this view is that in other cases heard by the Senate, in which varying degrees of the capital sentence were awarded, the law already provided the maximum penalty. The surprising thing is that the Senate should have been able and willing to increase the penalty of a law which, according to Mommsen and von Premerstein, had been deliberately kept moderate and even decreased by Augustus himself. It is particularly surprising that this change should have been made early in the reign and under the authority of Tiberius, who claimed to observe all Augustan precedents 'vice legis'. The Tacitean evidence would agree with the conclusion that the Julian law provided the penalty of repayment and *infamia* for plain extortion, and capital punishment for extortion with *saevitia*. Such a sliding scale would give scope for the activity of the senatorial court apparent in the diverse sentences recorded by Tacitus. Why else should

⁸⁸ Tac. *Ann.* 13, 30. Zumpt omits, but the case is in a list of extortion cases; 'luxuria saevitiaque' is merely a variant form of 'repetundarum reus' like 'provincia avare habita' in the same passage.

⁸⁹ Tac. *Ann.* 13, 52.

⁹⁰ *Ibid.* 14, 28. Cf. Tac. *Hist.* 2, 10.

⁹¹ Tac. *Hist.* 4, 45.

⁹² Tac. *Ann.* 4, 31. Cf. Zumpt, *op. cit.* p. 38; Rogers, *op. cit.* p. 83. Cases omitted as doubtful include that of C. Silius and his wife Sosia (*Ann.* 4, 19-20), mainly an extortion case but complicated by *maiestas*; Sosia certainly was punished for complicity in extortion, cf. the rider of Cotta, *loc. cit.* 20. Tacitus says: 'saevitum in bona non ut stipendiis pecuniae redderentur quorum nemo repetebat'. Were the charges of 'saevitia' only? Rogers, *op. cit.* p. 77, underestimates the element of extortion. The result was suicide. In the case of Pom-

ponius Labeo (*Ann.* 6, 29; Cassius Dio 58, 24) the charge was 'male administratae provinciae'; Dio mentions 'gifts'. The result was suicide, but Tacitus gives a wrong legal explanation of the motive; cf. Rogers, *op. cit.* p. 151. Statilius Taurus, in *Ann.* 12, 59, was charged with extortion and 'magicae superstitiones', and committed suicide.

⁹³ Tac. *Ann.* 1, 74. Cf. De Visscher, *op. cit.* p. 186.

⁹⁴ Rufus: Tac. *Ann.* 12, 22; *Hist.* 1, 77. Capito: *Ann.* 13, 33; 14, 48. Blaesus: *Ann.* 14, 18; *Hist.* 1, 77.

⁹⁵ Suet., *Otho* 2, 1.

⁹⁶ *Hist.* 1, 77. Uncertain sentences are: Caesius Cordus, *Ann.* 3, 38; 70, evidently less than exile; Vipsanius Laenas, *Ann.* 13, 30.

⁹⁷ Cf. De Visscher, *op. cit.* pp. 184, 192-3, 204 ff. He does not attempt to sort out the Julio-Claudian cases, cf. below p. 24.

the insignificant knight Clodius Quirinalis commit suicide if the penalty of the law was only *infamia*, or why should Vibius Secundus have feared the capital penalty for a mere conviction of extortion? In the case of Sulpicius Camerinus there is no suggestion that *saevitia*, though distinguished from *pecuniae captae*, came under a different law.

A closer examination of the first of these cases, that of C. Silanus, casts some light. Tiberius in fact invoked a precedent of Augustus before the senators gave their *sententiae*. It was that of Volesus Messalla, who as proconsul of Asia executed 300 men in one day.⁹⁸ Thus it would seem that this was only the second case of *saevitia* heard by the Senate. It is fairly clear that some extension of the law was involved that required the Senate's authority. Either the penalty of the law was being increased—the usual view—or its scope was being widened. Even without the indications of the s.c. Calvisianum the constant connexion of *saevitia* with the *lex repetundarum* would suggest that the Lex Iulia already provided the capital penalty for extortion with violence, but made no provision for violence alone, i.e. abuse of the *imperium* as such, although some misuses of *imperium* affecting the Roman State, which had nothing to do with extortion, had been brought under the extortion law by Caesar.⁹⁹ It may be suggested that the object of the senatorial decision in the two cases of Messalla and Silanus was to apply the full penalty of the Julian law attaching to misuse of *imperium* to the offence of *saevitia* unaccompanied by extortion. Such a view would explain why Tacitus makes some distinction between *saevitia* and *captae pecuniae*, and yet regards both as coming within the scope of the extortion law.

The most ambiguous case is that of Antonius Flamma: 'damnatur lege repetundarum et exilio ob saevitiam'. Tacitus' words were taken by Zumpt as clear evidence that *saevitia* was punished by another law, not the Julian, and that the latter did not exceed *infamia* in its penalties.¹⁰⁰ The exact meaning of the Latin is elusive, and consideration only makes it less certain; the *et* may be conjunctive or disjunctive. The passage comes from the *Histories*, not the *Annals*; it is reminiscent of the attitude of Pliny the Younger to contemporary cases, and may reflect the view which Tacitus took of the law before he acquired a fuller knowledge of its working in the Julio-Claudian period (below p. 24). In any case, here as elsewhere *saevitia* is mentioned in close connexion with an extortion offence as incurring an increased penalty.

The solution lies also in the effect of the short process introduced by the s.c. Calvisianum, to which more influence may be attributed than has hitherto been allowed. If there was a scale of penalties under the Julian law, the s.c. would have had the effect of making it rare for the higher penalties to be invoked. The cumulative effect of the cases recorded by Tacitus under Claudius and Nero is to suggest that the short process had become normal. Even when the longer process involving a full-scale trial was invoked against Pompeius Silvanus, he had no difficulty in getting the short process adopted instead, during the preliminary discussion in the Senate.¹⁰¹ Hence it may well be that the short process of the s.c. came to be regarded as the normal form of an extortion trial, and its penalty the normal penalty. Thus Tacitus, with his well-known dislike of technical terms, and influenced by contemporary interpretations, could easily

⁹⁸ Cf. De Visscher, *op. cit.* p. 190, n. 3. De Visscher misses the connexion between Messalla's massacres and the Tacitean *saevitia*. For Messalla Tac. *Ann.* 3, 68; Seneca, *de Ira* 2, 5.

⁹⁹ Above p. 13.

¹⁰⁰ Zumpt, *op. cit.* (1847), p. 28. Cf. De Visscher similarly, *op. cit.* p. 191.

¹⁰¹ Tac. *Ann.* 13, 52, below p. 24.

give the impression that penalties inflicted by the longer process were in excess of the law. It will be seen shortly how similar is his account of the trial of Silanus in A.D. 22 to Pliny's descriptions of trials some eighty years later in which he and Tacitus took active part.

Saevitia and *pecuniae captae*, then, were regarded by Tacitus' sources as two forms of the extortion charge, and it seems that, at the time when the s.c. Calvisianum was in full force, crimes exceeding simple extortion were punished by a capital penalty. It is very hard to dissociate this penalty from the *Lex Iulia*. If there was any innovation it was Augustan, and arose from the case of Volesus; but it is hard to believe that Augustus introduced in this case by *senatusconsultum* alone a new capital offence affecting the senatorial class, without securing the traditional if nominal sanction of the people. On the other hand it agrees with all that is known of Augustus and Tiberius that an existing law should have been widened by interpretation to cover something for which there was no sanction in the existing statutes.

The Trajanic Period. The detailed accounts in Pliny's letters of extortion trials are more straightforward than the Tacitean evidence and need less discussion.¹⁰² That of Marius Priscus is the most illuminating.¹⁰³ He abandoned his defence before the full Senate, and sought the short process of trial in the form which it had then assumed. This is described as *dari iudices*, and the function of these 'iudices' seems at first sight to have been reduced to an examination of particular accounts, analogous to the Republican 'litis aestimatio'. Whether or not technical condemnation came only after the jury had given its decision, as will be argued below, condemnation in this form involved only *infamia* and consequent loss of senatorial status: 'stabat modo consularis modo septemvir epulonium, iam neutrum'.¹⁰⁴ The objection had, however, been raised: 'excessisse Priscum immanitate et saevitia crimina quibus dari iudices possent'.¹⁰⁵ The defence in answer pleaded 'ne quid ultra repetundarum legem quaereretur',¹⁰⁶ while diverse voices maintained or denied that the Senate was free to enquire beyond the scope of the law: 'cognitionem senatus lege conclusam', and to fit the penalty to the crime: 'quantum admisisset reus tantum vindicandum'.¹⁰⁷ The special jurors continued their enquiry while, or before, the Senate examined the accomplices of Marius. The new charges were that Marius took, and the others gave, monies to secure judicial murders, i.e. the charges were of extortion with *saevitia*, not of *saevitia* alone. Finally a proposal was adopted by which Marius was expelled from Rome and Italy, in addition to the restitution exacted by the special jury, and his chief accomplices were similarly punished.¹⁰⁸ Some had, however, proposed that no extra penalty should be exacted from Marius for the *saevitia*, and one accomplice, though found guilty, was not even expelled from the Senate, but simply excluded from the holding of provinces. That is, the Senate reduced the penalty below what had hitherto been the minimum even for extortion without *saevitia*.

After this it is not surprising to find that in the case of Julius Bassus, who was charged with a very slight offence, it was proposed that he should suffer no penalty

¹⁰² De Visscher has analysed them in detail, *op. cit.* pp. 194 ff. The following remarks assume the conclusions reached by De V. in respect of procedure, with the modifications suggested below p. 23.

¹⁰³ Pliny, *Ep.* 2, 11.

¹⁰⁴ *Ibid.* s. 12.

¹⁰⁵ *Ibid.* s. 2.

¹⁰⁶ *Ibid.* s. 3.

¹⁰⁷ *Ibid.* s. 4.

¹⁰⁸ *Ibid.* s. 19.

beyond repayment: 'salva dignitate iudices dandos'.¹⁰⁹ The principle was maintained in this case that the Senate had power 'mitigare leges et intendere', but those who maintained the letter of the law said that it was not consistent 'retinere in senatu cui iudices dederis'.¹¹⁰ Baebius Massa, condemned under Domitian, may also have remained in the Senate, in which he certainly spoke once after conviction.¹¹¹ In the case of the agents of Caecilius Classicus, who himself died before trial, the sentences of *relegatio* were regarded by Pliny as a special punishment: 'pluribus damnatis atque *etiam* relegatis';¹¹² this case was heard by the Senate and not by a special jury.

Pliny's evidence, taken by itself, suggests at first sight that the Julian law knew no higher penalty than *infamia*, and that sentences of *relegatio* were due to the arbitrary decision of the Senate. Four times what Pliny calls the 'lex repetundarum' is associated with the procedure 'dare iudices' and the penalty of *infamia*, and it is clearly stated that to enquire about *saevitia* is to go beyond the scope of the law. The evidence of Pliny cannot, however, be detached from the evidence of Tacitus, to secure a complete picture. It has been argued above that in Tacitus *saevitia* and *pecunia capta* are both regarded as falling under the extortion law. The particular value of Pliny is that he makes certain what is sometimes not certain in the *Annals*, that the penalties above *infamia* were really inflicted for *saevitia* and not for any latent charge of *maiestas*. Hence in the period covered by the *Annals* it should follow that the *poena saevitiae* was the *poena legis*. In so far as Pliny departs from this view he may well represent a development in the attitude of lawyers and advocates to this law. It is notable that it is in Tacitus' earlier work, the *Historiae*, that he most closely approximates to the view of Pliny. In the maturer *Annals* he is more careful.

How then to account for this marked change in legal theory? Largely it is due to the gradual abandonment of the longer process during the Julio-Claudian period, followed by a decided decrease of senatorial activity in the Flavian period, to which Pliny bears explicit witness, especially under Domitian, when also governors were too strictly supervised or too frightened of the Princeps for serious cases of extortion to be common.¹¹³ With the revival of the senatorial court under Trajan the necessity for dealing with charges of *saevitia* recurred. The commoner short process had survived more tenaciously and with little change,¹¹⁴ but the method of handling *saevitia* was remodelled. The Trajanic situation was in many ways the opposite of that for which the s.c. Calvisianum was framed under Augustus. Now it was the crimes involving capital offences that needed special consideration. The Priscus case, the first in the series, reads very much as though at that date the more serious charges were in desuetude, and nobody knew the correct procedure. It is a particular instance of that 'iuris senatorii oblivio quaedam et ignorantia' to which Pliny refers in another context.¹¹⁵

It is not surprising that in this atmosphere the amateurs of public law who disgraced the Trajanic Senate commonly held that the Lex Repetundarum did not go beyond the penalty of *infamia*, and that anything more was an extra added by the *auctoritas* of the

¹⁰⁹ Pliny, *Ep.* 4, 9, 16.

¹¹⁰ *Ibid.* s. 17 and 19.

¹¹¹ *Ibid.* 7, 33, 4 and 7.

¹¹² *Ibid.* 3, 9, 22.

¹¹³ *Ibid.* 8, 14, 2-11; Suet. *Dom.* 8, 2. Even under Trajan an extortion case might be referred to the Princeps

in special circumstances; cf. Pliny, *Ep.* 7, 6, 6 and 7, 10, where the intention of the provincials was in doubt.

¹¹⁴ Cf. Baebius Massa above, and Suet. *Dom.* 8, 2; the latter was not a normal case of *iudices dati* according to De Visscher, *op. cit.* 191.

¹¹⁵ Pliny, *Ep.* 8, 14, 2.

Senate. It is remarkable that Pliny throughout his *Letters*, including his official correspondence with Trajan, seems very ill acquainted with legal texts. Cicero may be despised as rhetorical and a poor lawyer, yet he sprinkles his speeches and letters with the *ipsissima verba* of laws and *senatusconsulta*. These are conspicuously absent from Pliny. It is indeed apparent that the Senate as a law court was not greatly interested in strict adherence to the letter of the law, either in penalties or in procedure. In the case of Varenus the Senate extends to the accused what had hitherto been the prerogative of the prosecution, the right to summon witnesses from the provinces.¹¹⁶ Pliny's comment is: 'impetravimus rem nec lege comprehensam nec satis usitatam, iustam tamen'. Again it is contrary to the spirit of the law, and the letter of the s.c., that a man should stand trial twice for the same offence; yet Marius Priscus was allowed to suffer the gravest *praeiudicium* by the shorter process before facing the charges of *saevitia*.¹¹⁷ Again, in the matter of accomplices the Trajanic Senate extended the law,¹¹⁸ and an attempt was made at the trial of Bassus to undermine a part of the law itself about the taking of gifts.¹¹⁹

The administration of the Lex Julia as such was in fact fast collapsing at this time. Hence it is unsafe to use the Plinian evidence alone to establish the scope of the law in earlier periods. At this date even the penalty of *infamia* could be withheld by a vote of the Senate, and it may be concluded that those parts of the Julian law which inflicted capital punishment had long been in desuetude. This was one of the most remarkable consequences of the development of the s.c. Calvisianum.

Evidence of the Digest. The few statements to be found in the *Digest* referring to the penalties of the Lex Julia agree every well with this sketch of its history. In the title (48, 11) *De Lege Iulia Repetundarum*, Venuleius Saturninus is familiar with *infamia* as a consequence of conviction for extortion: 'hac lege damnatus testimonium publice dicere aut iudex esse postulareve prohibetur'.¹²⁰ So elsewhere Cassius Longinus, the only witness of the first century A.D., in a brief reference.¹²¹ According to Papinian this did not apply to prosecutors subsequently condemned for *calumnia* under the law.¹²² But according to Macer the higher penalties were in his day considered to be *extra ordinem*: 'hodie ex lege repetundarum extra ordinem puniuntur et plerumque vel exilio puniuntur vel etiam durius prout admiserint'.¹²³ These words, on which Mommsen principally relied for his view of the *original* penalties, are very reminiscent of Pliny's remarks. They seem to mean that the capital penalty was given in cases to which it was not originally applied by the law, and the next sentence instances the case of governors who in the heat of the moment, 'calore inducti', and without the passing of money, execute an innocent man or one whom they ought not to punish. Though these latter words may not be pure Macer, they agree very well with the situation in Pliny.¹²⁴ The law was gradually extended under the general heading of *saevitia* to cover cases to which it did not originally apply. This, in effect, was a check on the *imperium* and *coercitio* of magistrates, such as would become necessary with the gradual levelling of the distinction between citizens and provincials during the Principate, and the disappearance of the

Republican notion of the unlimited power of the *imperium*-holder. It does not follow from Macer that no capital penalty was known to him in the text of the Julian law, only that the application of severe penalties went in his day beyond the original enactment.¹²⁵ Macer's evidence, moreover, explicitly contradicts De Visscher's view that capital punishment for offences like that of Marius Priscus was under a law other than the extortion law.

Thus the imperial jurists contain the same scheme of punishments, *infamia* for ordinary cases and capital sentences for serious charges, as is documented as early as the time of Tiberius, implied in the s.c. of 4 B.C., and even hinted in Cicero.

VI. LATER HISTORY OF THE SHORTER PROCESS

The preceding sketch of the penalties of the Julian law needs to be completed by some account of the later history of the procedure introduced by the s.c. Calvisianum, if only to substantiate some assumptions that have been made during the discussion.

The tendency, in some recent discussions of extortion procedure under the Principate, has been to minimise the connexion between the juries of the s.c. and the 'iudices dati' of Pliny. Stroux and others go so far as to regard the s.c. as ephemeral and rapidly displaced by the growth of the senatorial court and the establishment of new 'iudices dati' to whom only the 'litis aestimatio' was referred.¹²⁶ Against this De Visscher has maintained that the procedure in Pliny is in essentials the same as that laid down by the s.c.¹²⁷ His main point is that Stroux has greatly underestimated the importance, in the s.c., of the preliminary investigation of the Senate, from which there developed the custom of examining the charges fully before referring them to the jurors, whose function thus became similar to but not identical with 'litis aestimatio'.

De Visscher's interpretation may be clarified in a few particulars. Ambiguity derives largely from the fact that in the s.c. the initiative rests with the provincials, but in Pliny it seems to rest with the defendant: 'omissa defensione iudices petiit'.¹²⁸ The case of Julius Bassus, however, makes it clear that these words describe the motive of Priscus rather than the actual procedure, and mean that if Priscus kept quiet the Senate would allot jurors automatically. It was for the Senate to decide that the law applied—'lege repetundarum teneri reum'—and either to give jurors or else, as in the case of Marius, to initiate a wider enquiry.¹²⁹ That the procedure was in essentials still that of the s.c. is borne out by the fact that 'testium evocatio', excluded by the s.c. from the short process, was still limited to serious cases.¹³⁰

Again, in the s.c. it is the job of the jury to give a verdict. In Pliny it seems at first sight as though the accused was regarded as already condemned when he was referred to jurors. Closer examination shows that it is only after Marius has been before his jury that the sentence takes effect: 'stabat modo consularis etc. . . . iam neutrum'.¹³¹ At the second session of the Senate he is accordingly absent, whereas when he was 'given jurors' he was still a senator. The essential difference between the two periods is

¹²⁵ 'vel exilio puniuntur vel etiam durius'.

¹³¹ *Ibid.* 2, 11, 9 and 12–13. De V., *op. cit.* pp. 220 f.

factual rather than theoretical. The Augustan jurors can acquit or condemn, but the Trajanic jurors must condemn on most counts because the preliminary hearing has, in fact, established a *praeiudicium*. The distinction between the function of these jurors and the Republican 'litis aestimatio' is that to each charge these jurors have to give a verdict of 'fecisse videri' or 'non fecisse videri' -ἀκουέτωσαν καὶ διαγεινωσκέτωσαν—before they assess damages—τοσοῦτον ἀποδιδόναι κελεύετωσαν.¹³² However, it remains true that in Pliny's day the essential part of *all* extortion trials was the investigation before the Senate. It is there, and not before the *iudices*, that the decisive pleas are made on both sides.¹³³ Bassus is virtually condemned when jurors are given, and hence the Senate can provide in anticipation that he shall not suffer *infamia*.¹³⁴ The main factor in assuring this change may well be, as De Visscher, following Arangio-Ruiz, maintains, that the Senate arrogated to itself the right, contrary to the letter of the s.c., of refusing to give jurors at all if it was not convinced of the guilt of the accused.¹³⁵

Had this change already been effected in the Julio-Claudian period? De Visscher observes that the trial of Granius Marcellus in A.D. 15, and probably that of Caesius Cordus in A.D. 22, were exactly in accordance with the s.c.; a preliminary examination reduced the case to one of simple extortion, which was then referred to a special jury.¹³⁶ But after this he finds no certain traces of the short process in the Julio-Claudian period, largely because he does not connect the accusations of *saevitia* directly with the extortion law. Above, a distinction was drawn between trials involving *saevitia* and the capital penalty and those involving *infamia* and simple extortion.¹³⁷ It is a fair surmise that some if not all of the latter had been heard by the short process. This would explain the lack of information in Tacitus about many of these cases. When they passed from the Senate to the special jury they would cease to be recorded in detail in the *acta senatus*.

Fresh information can be extracted from Tacitus' reference to the trial of Pompeius Silvanus, of which De Visscher seems not to have noticed the relevance.¹³⁸ The prosecution evidently summoned Silvanus on an ordinary extortion charge by the longer process, because they sought to fetch witnesses from afar, i.e. from the province: 'magna vis accusatorum circumsteterat poscebatque tempus evocandorum testium'.¹³⁹ But Silvanus objected, demanded that he should be tried forthwith, and succeeded in this: 'reus ilico defendi poscebat, valuitque'. This can only refer to the short process of the s.c., since it was only by the s.c. that the prosecution's right to summon witnesses from overseas was suspended. In the same year, the longer process was also set on foot against P. Suillius, but abandoned when it was found to involve a year's enquiry: 'annuam inquisitionem impetraverant'.¹⁴⁰ This was the very cumbersomeness that had led to the establishment of the short process.

The Tacitean evidence thus shows, first, that both processes still existed in the reign of Nero, for simple extortion; second, that the longer process was rapidly falling into

¹³² Ll. 130-4.

¹³³ Cf. De Visscher, *op. cit.* p. 201.

¹³⁴ Pliny, *Ep.* 4, 9, 17: 'Macro legem intuenti consentaneum fuit damnare eum qui . . . munera acceperat'.

¹³⁵ De Visscher, *op. cit.* pp. 206-8; V. Arangio-Ruiz, *art. cit.* (1928), p. 351.

¹³⁶ Granius Marcellus: Tac. *Ann.* 1, 74. Cordus: *ibid.* 3, 38; 70. De Visscher, *op. cit.* pp. 187, 189. If Cordus was sent before the jury, why not others where Tacitus'

language is similar?

¹³⁷ Above p. 20.

¹³⁸ *Ann.* 13, 52.

¹³⁹ Tacitus implies, though he does not explicitly say, that the witnesses were from the province; the s.c. allowed subpoenaed witnesses from Italy only, and required the trial to be finished in thirty days.

¹⁴⁰ Tac. *Ann.* 13, 43.

disuse; third, that at this date the procedure before the special juries was still a genuine trial, because the adoption of the short process for Silvanus evidently did not involve his automatic condemnation. It is a fair assumption that, where Tacitus indicates a penalty not above *infamia* and yet seems well acquainted with the content of the charges, as in the trial of Pedius Blaesus, the case was heard in the full Senate,¹⁴¹ and that where no details are recorded and the penalty is still *infamia*, there the short process was used. It is noteworthy that in all the Tacitean evidence re-examined here, there is no hint of the survival of the process before a panel court, the old *iudicium publicum*, in the Julio-Claudian period.

VII. CONCLUSION

The theories developed above may be summarised thus. The early extortion laws limited the consequences of condemnation to fines and *infamia*. In the Lex Cornelia the penalties were not decreased, though the balance of evidence is against the view that this law made extortion a capital offence. The Lex Iulia brought under the extortion law certain offences which hitherto had had no connexion with it, and introduced a scale of punishments culminating in the capital penalty for extortion with violence. Precedents under Augustus and Tiberius extended capital punishment to abusive acts of violence unaccompanied by extortion, designated in the literary sources as *saevitia*. But the increasing popularity of the short process introduced by the s.c. Calvisianum of 4 B.C., which excluded the capital sentence, led to the disuse of the longer process, now transferred to the senatorial court. The punishment of *infamia* thus came to be regarded as the normal punishment for extortion, and under Trajan the treatment of serious charges was assimilated to that of other capital offences, the Senate using its *auctoritas* to vary the sentences without regard for the letter of the law.

A. N. SHERWIN-WHITE

¹⁴¹ Tac. *Ann.* 14, 18.

Addendum. The condemnation of Cossutianus Capito (n. 94) is a clear case of the Shorter Process, and anticipates the first phase of the Priscus trial: 'postremo defensionem omisit ac lege repetundarum condemnatus est'.

Pliny, *Ep.* 2, 19, 8, strongly supports the view that the criminal charges against Priscus (n. 77 and p. 20) fell under the extortion law: 'inesse repetundarum legi quod postularemus'.

A. CHRISTIAN ALEXANDRIA AND THE SHRINE OF ST. MENAS

It is one of the saddest losses of history that of Antioch and Alexandria, two of the great early centres of Christian art and learning, hardly a stone should now be standing above ground. Of the two, Alexandria is in the worse case. Antioch can at least boast the magnificent series of mosaics unearthed before the war by the Princeton Expedition.¹ At Alexandria on the other hand there is little chance that excavation can ever reveal any substantial remains of the classical city, which was ruthlessly destroyed in the last century to make way for the expansion of its modern successor; and whereas in the case of the minor arts the contribution of Alexandria to the contemporary art of the Mediterranean, whether in its relation to the Byzantine world or to the nascent Coptic art of Upper Egypt, can at least be usefully discussed in the light of surviving ivories, textiles, manuscript illustrations, and the like,² in the field of architecture and of architectural ornament any such enquiry is hampered by a vacuum at the heart of the problem. The questions so well defined by Kitzinger in regard to Coptic sculpture³ are capable of wider application. In particular, the extent of Alexandria's contribution to the development of Christian architecture during the fourth, fifth, and sixth centuries is a matter of the first importance to students of Coptic and of late-classical and Byzantine archaeology alike.

A possible line of enquiry is suggested by the actual sculptural remains from Alexandria itself, now collected in the city's Greco-Roman museum. These have never been seriously studied; and though perhaps too scanty to afford in themselves a basis for any far-reaching conclusions, they have nevertheless a decided and distinctive character, which warrants study.

A second, and perhaps more fruitful, source of information is to be sought in the archaeological exploration of the Maryût, the region which lies to the west and south-west of Alexandria, in the angle between the sea and the western edge of the Delta.⁴

¹ Doro Levi, *Antioch Mosaic Pavements*, Princeton, 1947; C. R. Morey, *The Mosaics of Antioch*, London and New York, 1938.

² A recent and fundamental study is that of C. R. Morey, *Early Christian Art*, Princeton, 1942. A major point still in dispute is the extent to which the city of Alexandria continued to be the fertilising, as it had been the formative, centre for the 'Alexandrian', impressionist style. On this

see notably review by Miss Der Nersessian, *Art Bulletin* XXV, 1943, 80-6; and reply by Morey, *op. cit.* pp. 160-6. See also section E, below, pp. 60-71.

³ See bibliography, p. 26; and section E, below, pp. 60-71.

⁴ The history and topography of the Maryût is well summarised by A. de Coisson, *Mareotis*, see bibliography, p. 26.

This region, which may for convenience be defined as stretching as far as el-Hammâm to the west and southwards to the belt of sand-dunes to the north of the Wadi'n-Natrûn, is now desert, occupied only by nomadic tribesmen. For a period of antiquity, however, and as late as Roman times, it carried a large settled population, the remains of whose farms and villages can be seen in very large numbers over the whole area. Its abandonment was not due to any major climatic change, although there is evidence of a gradual and continuous desiccation since early dynastic times. The recurrent records of flocks and herds captured by the early Pharaohs in areas that are now uninhabitable desert are too numerous and too consistent to allow of any other conclusion.⁵ However, the primary causes of its eventual desertion were other. Firstly, and perhaps decisively, there was the collapse of the strong Ptolemaic and Roman government, which alone could ensure the security of these settlements against the ravages of desert tribesmen. Secondly, and largely as a consequence of this decrease of security, there was a slackening in the methods of water conservation. Wells and cisterns were neglected, and the *kurûm* (sing. *karm*, literally 'a vineyard'), the rectangular banked enclosures for the capture of the torrential winter rains and an essential feature of the local economy, were allowed to lapse. Thirdly, there was the disastrous drop in the level of the fresh-water table, which took place with the desiccation of Lake Maryût. This lake, which in classical times stretched well beyond the modern Burg el-Arab, and carried large river-vessels to the quays which can still be seen on the sites of the deserted lake-side cities of Taposiris and Mareotis, relied for its replenishment on the annual flooding of the Canopic branch of the Nile. After this became silted up, probably in the fifth or sixth century, the position was for a time maintained by the Alexandria canal; but despite constant attention this, too, passed out of use.⁶ The losses from evaporation were no longer replaced, and the lake rapidly shrank to the dimensions of a brackish marsh. It was the resultant drop in the fresh-water table throughout the regions adjacent to the lake which dealt a final blow to the lingering remains of classical settlement.⁷

The farms and villages of the Maryût must have been almost entirely dependent on Alexandria, to which they sent wine, fruit, and market-produce, and in return received a part of the merchandise that flowed through the twin harbours of that great city. With the advent of Christianity, although the famous early monastic settlements of Nitria and Scetis lay outside the Maryût proper, within it are to be seen the remains of a number of contemporary buildings and communities which, though less austere, no doubt reflect more truly the life and art of the capital itself: at Taposiris (Abu Sir, near Burg el-Arab), a monastery built within the enclosure of the great Ptolemaic

⁵ De Cosson, *op. cit.* pp. 19-23.

⁶ Ammianus (xxii. 15. 10) in the late fourth century saw the Canopic ('Heracleotic') branch. The Arab writers, on the other hand, all speak of the Alexandria canal. The process was probably gradual and it seems to have been complete by the twelfth century. Prince Omar Toussoun, *Mémoire sur les anciennes branches du Nil* (Mémoires présentés à la Société Archéologique d'Alexandrie, vol. I, fasc. 2, époque arabe, pp. 195-7); De Cosson, *op. cit.* chapter XII.

⁷ Throughout the permeable sandstones of the coastal region to the west of Alexandria, the fresh-water table rests at sea-level directly upon a bed of salt water. At Mersa

Matruh the Romans tapped this supply by an ingenious system of rock-cut channels sited just above sea-level, proving incidentally that here at any rate there has been no appreciable change of sea-level since Roman times (G. F. Walpole, *An Ancient Subterranean Aqueduct West of Matruh*, Survey of Egypt, Paper No. 42, 1932). In Alexandria detailed record of the water-level in the Kom el-Chogâfa catacomb, which has sunk slightly and is now partly water-logged, has revealed a periodic variation of level that is in direct relation to the level of the Nile flood (C. Audubeau Bey, 'Note sur l'affaissement du Nord du Delta égyptien depuis l'empire romain', *Bull. Inst. d'Égypte*, vol. I, 1919, pp. 118, 134).

temple;⁸ at Karm Abu Girg, south-east of Amrîyah, a chapel which contained a fine series of frescoes, now in the Greco-Roman Museum at Alexandria;⁹ near by, at Kurûm et-Tuwâl, the remains of a small church;¹⁰ south of Amrîyah, at Alam Shaltût, two distinct buildings with Christian frescoes;¹¹ and far to the south the lonely chapel of Qasr el-Qatâgi.¹² In addition there is hardly an ancient site throughout the Maryût in which it is not possible to pick up the sherds of late Roman *sigillata* pottery, which testify to an intensive occupation between the fourth and seventh centuries.

In the centre of this region, eight miles south of the lake and about forty miles from Alexandria, lay the shrine of St. Menas. It is not easy nowadays to realise the place which this shrine once held in the minds of contemporary Christians, so completely did it later vanish from human record. Yet in its heyday not only was it the national shrine of Coptic Egypt, but foreign pilgrims came to it from the farthest ends of Christendom. The flasks, in which they carried away a drop of oil from the lamp that burned before the saint's tomb, have been found from Provence to Asia Minor, from Hungary to Ethiopia.¹³ When, in the ninth century, it was threatened with destruction on the orders of the Caliph (see below, p. 35), the patriarch of Alexandria begged that it be spared in these words: 'Behold, all the churches under my jurisdiction are before thee. This church alone I desire of thee that thou injure not.' His plea was unavailing. As his enemies remarked, 'None of the churches is like this one.' It was no pale replica of the churches of Alexandria, but itself the standard by which they could be judged. Just as in Syria the great pilgrimage church of St. Simeon Stylites gives us a glimpse of the vanished glories of Christian Antioch, so in the deserts of Maryût we can still see something of the Alexandria of St. Athanasius and of his successors.

The site was identified and partially excavated early in the century by Monsignor Kaufmann, who cleared the church and some of the surrounding buildings and removed large quantities of sculpture and other material to Frankfurt. In the words of Professor Monneret de Villard it was 'badly excavated and worse published'. Kaufmann issued several preliminary reports, but of the final report only the first volume ever appeared in print. The plan which appears therein¹⁴ has, however, passed into the standard works of reference; and except for a brief campaign undertaken by Dr. Ev. Breccia in 1926-7 primarily for the purpose of conservation,¹⁵ Kaufmann's conclusions were for thirty years accepted without further verification. They first received critical examination in 1936 when Dr. F. W. Deichmann, accompanied by Dr. A. von Gerkan, visited the site, and subsequently called attention to some of the manifest absurdities of Kaufmann's account.¹⁶

¹⁵ Ev. Breccia, *Municipalité d'Alexandrie: le Musée gréco-romain 1931-2*, pp. 23-4, pls. VIII-X. As will be seen from the present article, the new features then revealed were elements of a structure far more complex than he imagined.

¹⁶ F. W. Deichmann, 'Zu den Bauten der Menasstadt', *Archäologischer Anzeiger*, 1937, 75-86. Deichmann's observations are characteristically acute, but in the light of all the evidence (some of it only available since) his conclusions are not acceptable.

In July and August 1942 the writer had an opportunity to re-examine at leisure the site in the company of Prof. (then Brigadier) R. E. M. Wheeler. Recent casual digging by persons unknown had revealed several new features of interest; and it was at once apparent that the structural history of the tomb of the saint and of the church immediately above it was far more complex than had previously been appreciated. Excavation was, of course, out of the question. But with the aid of superficial clearing and cleaning, it was possible to make an accurate plan of the existing remains, and from this, coupled with a detailed examination of the visible signs of structural sequence, to deduce with some confidence the history of the development of the shrine and of its buildings.

By a happy coincidence a Coptic version of the history of the shrine, written at some date before A.D. 892-3, has recently been the subject of a study by Mr. James Drescher of the Fuad I University at Cairo, who very kindly allowed the writer access to his then unpublished material. A comparison of the results of the two enquiries is sufficiently striking in itself to warrant a fresh publication of the existing remains. In its initial preparation the writer is much indebted to the help of Mr. Drescher; of Prof. R. E. M. Wheeler, in conjunction with whom the structural remains were examined and planned; of Mr. Alan Rowe, Curator of the Greco-Roman Museum of Alexandria; of Judge C. Brinton, President of the Royal Archaeological Society of Alexandria; and of Major W. Jennings-Bramly of Burg el-Arab. The plan is largely the work of Mr. D. H. White. The writer's subsequent debt to Professor Monneret de Villard will be evident in the pages which follow; and thanks are due to all those, and notably to Dr. Erik Sjöqvist, Professor G. De Angelis D'Ossat, Dr. R. Krautheimer, and Dr. F. W. Deichmann, who have since helped the writer with information and criticism.

B. THE HISTORICAL RECORD

The Menas literature has recently been the subject of a valuable study by James Drescher, in the introduction to his edition of a Coptic manuscript found at Hamouli in the Faiyûm and now in the Pierpont Morgan Library (Cod. M. 590).¹⁷ This manuscript, which is dated 893, contains three compositions, the Martyrdom of St. Menas, the Miracles of St. Menas, and an Encomium on St. Menas compiled after the Arab Invasion of 640 and attributed to John, Archbishop of Alexandria.¹⁸ It owes its importance to its manifestly greater reliability than any of the versions previously available, whether Coptic, Greek, Arabic, or Ethiopic. The Martyrdom and Miracles follow familiar lines, and are of greater interest to the hagiographer than to the historian. The Encomium on the other hand, after an account of the life and martyrdom of the saint, relates how his remains were brought for burial to the Maryût, how they were later discovered and a shrine erected, and how the shrine prospered and developed under various emperors till the Arab Conquest. It is a document which requires interpretation in the light of the clearly expressed prejudices of its author; but it remains

¹⁷ James Drescher, *Apa Mena* (Publications de la Société Copte: Textes et Documents, No. 1), Cairo, 1946. Earlier articles by the same author are: 'St. Menas's Camels once more', *Bulletin de la Société Copte* VII, 1941, 19-32; and 'More about St. Menas', *Annales du Service des Antiquités d'Égypte* XII, 1942, 53-70. It will be obvious in the following paragraphs how much is owed to Dr. Drescher's pains-

taking researches; and the writer is further indebted for the loan of portions of Mr. Drescher's manuscript before publication and for much helpful advice.

¹⁸ John III, 677-86, or perhaps more probably John IV, 775-89, who had been *oeconomus* of the Maryût shrine. *P.O.* X, p. 381; XI, p. 605.

unquestionably the most important surviving literary evidence for the foundation and early history of the shrine.

The origins of the cult of St. Menas are shrouded in legend, and from the tangle of improbabilities, contradictions, special pleading, and downright falsehood, which constitute the Menas literature, it is often hard to extract any coherent thread of historical fact. It seems probable that the issue was at the outset confused by the existence of a Phrygian saint of the same name, who was martyred at Cotyaeum, and that the two legends early became assimilated. Certain it is that such of the ancient versions as try to account for the presence, in a remote desert village of the Maryût, of the remains of a saint martyred in Phrygia, fail even by the modest standards of credibility required of such literature. According to one account current in Egypt the saint was a simple camel-herd, who was born, lived, and died in the Maryût. A second version claimed him as an Egyptian of noble birth, whose parents had migrated to Phrygia, where after a period of military service he suffered martyrdom. His body, according to this account, was brought back to Egypt, and after a series of miraculous happenings was buried in the desert. The author of the Encomium, who writes with a strong aristocratic bias, berates 'foolish men seeming to do him honour but rather uttering things unfit about him, some that he belonged to Nepaeiat (*used in Coptic for the Greek* Λιβύη), others that he came from Mareotes, and others that he was a camel-herd'.¹⁹ It is characteristic of the early Coptic Church, a body remarkable rather for its zeal in the faith than for any pedestrian standards of veracity, that it should have preferred instead the strange tale of camels and sea-serpents, and of miraculous journeys by sea and land, which constitutes the first half of the Encomium.

On the whole the version that the Encomium is at embarrassed pains to refute commands respect by its very simplicity. St. Menas of the Maryût may well indeed have been a local saint, who lived and died in modest obscurity; and only later, as the healing fame of his remains came, by some chance, to spread out of all proportion to his fame during life, did he absorb the character and title of an, until then, better-known St. Menas of Cotyaeum.

Attempts by modern commentators to show that the saint was a fictional being, who replaced a local pagan cult, carry no conviction.²⁰ Extensive excavation has revealed no trace of an earlier shrine, let alone of a shrine sufficiently important to account for the later popularity of the saint;²¹ and in general terms, as Drescher remarks, such an hypothesis, however superficially attractive, singularly fails to explain the practical steps whereby in the space of a few years a pagan deity could be convincingly transformed into an allegedly historical martyr. It would have been a very different matter from the often-attested occupation of a pagan shrine by a being such as St. Michael, who was not required to have earthly connexions, or from the absorption of established pagan attributes and festivals by an equally established local saint. This hypothesis raises more problems than it solves.

From the extensive literature which purports to describe the life, martyrdom, and burial of the saint, all that we can really say with certainty is that, at some date before the middle of the fourth century, the body of a certain Menas was found near Este, an

¹⁹ Drescher, *Apa Mena*, p. 129.

²⁰ Notably R. Miedema, *De Heilige Menas*, Rotterdam

1913, chapter V.

²¹ See below, p. 38.

outlying village of the Maryût; and that it came to acquire a reputation for miraculous powers of healing, which soon spread beyond the borders of Egypt, and within a few years was bringing pilgrims from the farthest ends of the Christian world. The identity of this Menas was early the subject of conflicting accounts, and about the only point upon which all of these agree is that he was in some way connected with the camels with which he was thereafter invariably depicted.

With the discovery, however, of the body, and the spreading fame of its miraculous healing powers, we pass from legend into history. Apart from minor contradictions and obscurities, the account of the growth of the shrine and of its buildings contained in the *Encomium* is clear and credible. It distinguishes a succession of churches on the site of the grave. The first of these was small and simple:

‘And so they built over the grave a small oratory like a tetrapylon. They hung a lamp in its midst like the first one. The lamp remained burning, without ever going out, day and night. All who took away of the oil of the lamp to distant lands received healing; so that a great concourse gathered there as well as countless multitudes coming thither at all times unceasingly.’²²

It was not long, however, before this little oratory became insufficient for the growing number of pilgrims:

‘And they suffered distress because the place was desert, and they lacked water and the benefit of the Holy Mysteries. Accordingly, the chief citizens of Alexandria and those of Mariotes and all the archons of Egypt besought the holy Athanasius, the archbishop, to build a wondrous memorial church to the glory of God and the holy Apa Mena. . . . God raised up the just and pious king, Jovian. Then the holy Athanasius undertook the carrying-out of the people’s request to the glory of God and His blessed martyr. And when the God-loving king, Jovian, heard, he wrote to the *stratelates* of Alexandria that he should help him with money for the building of the church. . . . He brought it to completion in all beauty, adorning it with precious marbles glistening like gold.

‘In the days of the just kings, Valens and Valentinus, his brother, the sons of the king Jovian of happy memory, they wrote to the *augustal* of Alexandria, Tatian.²³ He proclaimed to all the bishops of Egypt the combat (?) of the holy Apa Mena. And so the bishops met together and deposited the remains of the holy Apa Mena in the crypt which had been made for them. And they celebrated the feast of the consecration of the church on the first of Epêp.’²⁴

This second building, the memorial church of Athanasius (Archbishop of Alexandria, 326–73), was, it seems, begun under Jovian (363–4). It was substantially completed before the death of Valentinian I in 375, and was consecrated shortly after. It included, it will be noted, a crypt for the body of the saint.

So rapid, however, was the growth of the pilgrimage that soon this building, too,

²² Drescher, *Apa Mena*, p. 144.

²⁴ Drescher, *Apa Mena*, pp. 144–5.

needed enlargement. The third church was the work of Theophilus (Archbishop of Alexandria, 385-412):

'When some time had passed until the days of Theodosius the great, with Arcadius and Honorius, his sons, in the days of the Archbishop Theophilus, there being great peace and prosperity in their reign, (it befell that) when the feast of the blessed martyr came round, on the fifteenth of Hathor, many great multitudes assembled. And they suffered distress because the church could not hold the multitudes but they were standing outside in the desert. And the blessed archbishop, Apa Theophilus, was there. At the sight of the peoples' distress he wrote to Arcadius, the king. And the king ordered the building of a spacious memorial church. And they laboured with royal power and might, with decorative skill like the Temple of Solomon. And he made it one with the memorial church which the holy Athanasius had already built. And when he had brought it to completion in all beauty, he convened a synod of bishops and all the archons of Egypt. They consecrated it in glory and honour.'²⁵

Although Theodosius is mentioned, the text indicates clearly that the new church was built under Arcadius, 395-408. It enlarged, but apparently did not wholly replace, that of Athanasius. No mention is made of the crypt, although it is clear from the surviving remains that this, too, was enlarged and radically remodelled.

Before the death of Theophilus in 412 the structure of the great church of St. Menas stood sufficiently complete for the ceremony of consecration. The work of ornament with mosaics and marble panelling no doubt continued for many years afterwards. Two centuries later, in the time of Archbishop Michael I (744-68), a dispute arose over the possession of the shrine between the Coptic Church and the orthodox Christians of Alexandria, a dispute which was finally decided in favour of the Copts after the Archbishop had given the following evidence:

'Then the Patriarch answered and said, "Verily my father Theophilus and his successor Timothy were the builders of this church, and it is they also who testify to me that Theophilus founded it and set up its rows of pillars, for there is his name written upon them, and when he died Timothy erected the remainder, since there is his name inscribed. These are my witnesses who testify to this day".'²⁶

Timothy was Archbishop from 458 to 480, and his inscription presumably recorded the final completion of the church.

Timothy's contemporary, the Emperor Zeno, 474-91, was, for political reasons, a patron of the Coptic Church. He made benefactions to the monasteries of Scetis, in the Wadi'n-Natrûn, and at the shrine of St. Menas:

'Then the Archbishop, Timotheus, told the king, Zeno, about the barbarians who came over Mariotes, afflicting the shrine and all the churches in Mariotes. Then the king ordered all those of senatorial rank in the kingdom to build each of them a palace there. He also wrote to the archons of Alexandria and those of Egypt, that each of them throughout the land should build himself a house there until

²⁵ Drescher, *Apa Menas*, pp. 145-6.

²⁶ P.O. X, p. 132.

they made it a city. And so it was built and given the name Martyroupolis. Multitudes gathered to it from every land and resided in it. And the king, Zeno, established also a garrison of 1200 soldiers to guard that place against the inroads of the barbarian horde. And the God-loving king did this as an aid to the whole of Mariotes and the shrine likewise. And he provided their maintenance from the revenues of Mariotes. And he also gave to the shrine some eparchies of Egypt, remitting their taxes that the money might be used for the expenses of the church and the hospices which he built at it.²⁷

The dangers from marauding desert tribesmen and the establishment of a garrison were ominous portents of the time when central authority would no longer be able to afford such protection. As early as the middle of the fifth century the monasteries of Scetis, which were more isolated and exposed, had already thrice been devastated.²⁸ For the present, however, the shrine of St. Menas was very prosperous, and around it was growing a large civil settlement, which included quarters for the accommodation of visiting pilgrims, similar to those, for example, which can still be seen at Kala'ât Sim'ân, the great shrine of St. Simeon Stylites in Syria. Under Anastasius, 491-518, provision was made also for the well-being of pilgrims on the road. A Praetorian Prefect, Philoxenus, whose name is not elsewhere recorded,

'... built hospices by the lake and rest-houses for the multitude to stay at. And he had the market-place established among them in order that the multitudes might find and buy all their needs. He had spacious depositories constructed where the multitudes could leave their clothes and baggage and everything which they brought to the shrine. When he had completed everything, he called it Philoxenite after himself. He also set up porticoes at different places where the people might rest. And he established watering-places along the roads.'²⁹

With the close of the fifth century the period of growth and development came to an end. For the next two centuries we have very little direct information about the history of the shrine. The times were troubled. The increasing weakness of Byzantine rule, culminating in the Arab conquest of Egypt in 640, is clearly reflected in the recurrent record of bedouin forays. About 570 the monasteries of Scetis were sacked for the fourth time and remained desolate for nearly forty years.³⁰ The shrine itself of St. Menas escaped violence, but the general state of insecurity must have had an adverse effect on the volume of the pilgrimage. On the other hand it would be easy to exaggerate this aspect. As late as the beginning of the ninth century, the revenues derived from the pilgrims were still a considerable factor in the finances of the patriarch:

'But famine and plunder began to reappear in Alexandria; and the patriarch (James, 819-30) could not find that which he was wont to give to the churches, for nothing was left to him. And the visits of the faithful from all parts to the martyr St. Mennas at Maryût were interrupted; and with them the patriarch used to trade.'³¹

²⁷ Drescher, *Apa Mena*, pp. 146-7 and notes *ad loc.* The two Ethiopic versions give the figures of the garrison as 12,000 and as 123,000, figures which fairly mirror the relative reliability of these versions.

²⁸ In 407, 434, and 444. White II, pp. 154-5.

²⁹ Drescher, *Apa Mena*, p. 148.

³⁰ White II, p. 155.

³¹ P.O. X, p. 451.

A second passage speaks of

‘ . . . the poverty of the church arising from the interruption of the pilgrimages to the church of St. Mennas, the Martyr, in consequence of the continual wars.’³²

It was these revenues no doubt which lay behind the dispute for the shrine already quoted, in the time of the Archbishop Michael I, 744–68.

The attitude of the Arab conquerors was at first conciliatory. The monks of Scetis received a very favourable charter from ‘Amr ibn-el’Asi, respecting their rights and confirming their revenues.³³ It was not until the beginning of the eighth century that the requirements of State revenue brought about a change of policy. It may well be that on this occasion the shrine of St. Menas lost some of its regular income. But it was another hundred years before it suffered major disaster. In 833 the Caliph, al-Mutasîm, decided to remove his capital to Samarra, and to build the new city worthily he sent agents far and wide to collect marble columns and other precious building materials. At Alexandria the task was entrusted to a certain Lazarus (described with characteristic gusto by Severus ibn al-Muqaffa as ‘a malignant heretic of the Nestorian sect’), and this agent appears to have done his work with a will:

‘The People of his foul sect . . . led him out to the church of the martyr, St. Mennas, at Maryût, in their great jealousy against it, and then they said to him: “None of the churches is like this one, for all that thou hast come to seek thou wilt find herein”. So that Nestorian hastily arose, by the advice of the informers, and entered the church of the martyr, St. Mennas. And when he looked at the building and its ornaments, and saw the beauty of the columns and coloured marbles which it contained, he marvelled and was amazed and said: “This is what the prince needs. This is here and I knew nothing of it!”’

The protests of the patriarch, Joseph (830–49), were of no avail:

‘Yet the heretic would not listen to the patriarch’s words nor to his request and robbed the church of its coloured marbles and of its unequalled pavement, which was composed of all colours and had no equal, nor was its value known.’

Whereupon, we are told, the patriarch

‘ . . . did not cease to mourn night and day for the calamity that had befallen this holy church. And he took care to restore it quickly. For he sent for surface decoration from Misr and Alexandria, and began to repair with all beautiful ornament the places from which the pavements has been stripped, until no-one who looked at them could perceive that any thing was gone from them.’³⁴

Brave words! Joseph did indeed succeed in rebuilding a church within the shell of the old church of Athanasius; and the crypt beneath it had perhaps been left undisturbed. But the great church of Theophilus was abandoned to ruin, and some of its materials used in the new building. The glories of the shrine were gone.

³² P.O. X, pp. 467–8.

³³ White II, p. 268.

³⁴ P.O. X, p. 512 ff.

It was soon to suffer fresh misfortune. In 852, as a result of disorders at the annual festival of the martyr, the governor of Alexandria imprisoned the patriarch and seized the entire revenues of the feast.³⁵ A few years later, during the patriarchate of Shenouda, 859–80, it was to receive what may well have proved a mortal blow at the hands of the bedouin, who for a time gained complete control of the Maryût, levying taxes and seizing the lands and property of the church of St. Menas, and besieging in their convents the monks of the Wadi'n-Natrûn. 'The church of the martyr St. Menas at Maryût', we learn, 'which was the delight of all the Orthodox people of Egypt became a desert. No one was able to reach it in those days in which there was the siege around Alexandria'.³⁶ It does not appear that the shrine itself was destroyed; but it may well be doubted if it ever recovered anything of its former importance.

A small community lingered on; and by a twist of fortune Abu Mîna, once itself the goal of one great pilgrimage, now became a halting-place on another. Through it passed the Darb el-Haj, the caravan-road that brought Muslim pilgrims from Tripoli and the West on their long journey to Mecca. One of these pilgrims, el-Bekri, an Arab from Cordova, writing towards the end of the eleventh century, has left us a description of his journey. The second stage westward from Cairo brought him to El-Muna (or El-Mena), a ruined city on the western fringe of the Delta, and the stage before Abu Mîna itself.³⁷

'The next stage after Terremont is El-Mena, a district which includes three deserted towns with their buildings still standing. Several fine castles can be seen out in the sandy desert where the caravans run the risk of attack by nomad arabs. These castles, which are very strongly built and have remarkably high walls, are almost all raised on brick vaults. El-Mena has several wells of sweet water, but the supply is limited.

The next stage after El-Mena is Abu Mîna, a great church containing very strange images and statues. Lamps burn there day and night and are never extinguished. Below the building can be seen a great dome and within it the image of a man standing upright, either foot upon a camel, with one hand open and the other closed. The group is carved in marble, and is said to represent St. Menas. In the same church can be seen also figures of all the prophets (God's blessing be with them). That of Zacharias is beside that of John. The figure of Jesus stands on a great marble column, on the right as you enter, guarded by a locked door. A double curtain hangs in the front of the figure of Mary.

Outside the church are images of all kinds of beasts and of craftsmen. The figure of a slave-merchant stands surrounded by the objects of his trade, and in his hand a purse with a hole in the bottom. This symbolises the impossibility of a slave-merchant making a fortune. In the middle of the church there is a domed tabernacle containing images which purport to be angels. In one part of the church can be seen a mosque, perfectly oriented, where the muslims pray. The surroundings

³⁵ *History of the Patriarchs of the Egyptian Church*, ed. Yassâ' Aba al-Masih and O. H. E. Burmester, vol. II, part I, Cairo 1943, p. 3.

³⁶ *Op. cit.* p. 56 ff. and p. 59 ff.

³⁷ The two places, El-Muna (or El-Mena) and Abu Mina,

are clearly distinguished, although the similarity of names has at times led to some confusion. For the identification of El-Muna, see A. de Cosson, *B.S.R.A. Alex.*, No. 30, 1936, pp. 247–53.

of the church are full of fruit-trees, especially smooth-barked almond-trees and carob-trees, the fruit of which while still green tastes like honey and is used for making syrups. There are also many vines which provide grapes and wine to send to Cairo.³⁸

Abu Salih, writing rather more than a century later, records that the shrine still existed and that it still contained the body of the saint.³⁹ It was probably soon after that it was finally abandoned and the body brought to Cairo, where it seems to have been installed by the middle of the fourteenth century.⁴⁰ None of the later Arab historians mention the shrine in the desert. It passed into oblivion, leaving only heaps of sand-covered ruins and a name, Boumnah, by which it was known to the bedouin, to mark the place of what had been one of the great sanctuaries of ancient Christendom.

C. THE SURVIVING REMAINS

The city of St. Menas consists nowadays of a tangle of sand-covered mounds, rising in places thirty feet and covering an area of many acres. Kaufmann's excavations comprised not only the church itself but the whole quarter adjacent to the north; a large outlying church in the middle of a cemetery; a second, smaller chapel; a bath-building with a basilical hall; wells and cisterns; wine-vats; potteries for the manufacture of figurines, *ampullae* and other vessels; and a number of dwelling-houses. Stone from the lake-side quarries and, in places, brick were used for public buildings; while private houses were of plastered mud-brick with stone door-jambs.

Within the church itself, five main structural periods can be recognised. The first consists simply of an earth-cut catacomb. If there was at first any corresponding structure above ground, no trace of it now remains. Later there was built over the catacomb a small chapel of mud-brick. Then came a stone church, and at the same time a part of the catacomb was replaced by a stone-built crypt. The fourth phase saw the greatest expansion of the shrine. Church and crypt were rebuilt, with the addition of a baptistry to the west, and of a new, and larger, church to the east. Finally the new church was abandoned and a smaller, simpler building erected on the site of the earlier church. It can hardly be doubted that the grandiose reconstruction of the fourth phase represents the work of the Archbishop Theophilus and of his successor Timothy, under whom we know that the shrine attained its maximum development. With this fixed point, we get the following identifications:

- | | |
|--|---|
| I. The original burial-place. | An earth-cut catacomb, pagan in origin. |
| II. 'An oratory like a tetrapylon', built over the grave. | A mud-brick chapel built over the catacomb. |
| Mid-fourth century. | |
| III. The memorial church and crypt, built by Athanasius, and completed soon after 375. | The first stone church and crypt. |

³⁸ After the French version of G. de Slane, *Description de l'Afrique septentrionale par El Bekri* (second edition, Paris, 1913). From Abu Mina the next day's journey led to el-Hammam. The account of conditions in the Maryût is very valuable. Settled life had ceased, although there was evidently still water enough for agriculture where other

conditions permitted. What was lacking was security. Kaufmann's excavations revealed the remains of wine-presses.

³⁹ *The Churches and Monasteries of Egypt . . . attributed to Abû Sâlih, the Armenian*, ed. Everts and Butler, p. 103.

⁴⁰ Drescher, *Apia Mena*, p. xxxi, n. 2.

- IV. The great new church, 'made one with' its predecessor by Theophilus, 385-412. Finished by Timothy, 458-80. The first stone church and crypt remodelled. A new, and larger, church added to the east; also a baptistry at the west end.
- V. The pillage of the church by Lazarus and its rebuilding by Joseph, 833-49. The church of Theophilus abandoned; and a small church rebuilt on the site of that of Athanasius.

Period I. The Early Catacomb.

Of the catacomb in which the saint's body was originally laid, less than half now remains. The rest has been destroyed by later building. The soil here is a compact, sandy gravel, and the catacomb consisted of a connected series of earth-cut chambers with radiating loculi, of a type already familiar, in varying degrees of elaboration, from the Christian catacombs at Alexandria,⁴¹ and derived ultimately from the Ptolemaic and Roman tombs of the same region. It would have been entered either by a shaft or by steps, and there may well have been also some form of antechamber in the part now destroyed. It was lined throughout with white gypsum-plaster, and when first excavated this bore traces of simple ornament and of graffiti. From the more northerly of the two chambers which lie to the east of the Period IV crypt (Pl. VI, 2), Kaufmann mentions 'the Constantinian monogram' (not more precisely specified) and a graffito which records a certain Father Joseph. The second chamber contained the body of a Father Paul.⁴² In the western range Kaufmann observed further examples of the Constantinian monogram, and a cross with the letters IC XC above the horizontal stroke. The latter may almost certainly be completed as IC XC NIKA, inscribed within the four quadrants of the cross, a formula which is recorded not only from the Karmouz catacomb at Alexandria,⁴³ but also on an inscribed boss now in the Greco-Roman Museum at Alexandria, from Bahig, a village in Maryût due north of Abu Mîna.

Kaufmann states further that several of the graves, though rifled, showed signs of re-use, and that some had originally served for pagan burials. It is evident, however, from the products of the potters' workshops of the fifth and sixth centuries at Abu Mîna that the cult of St. Menas long retained a decidedly pagan flavour. At Ehnasiya, too, Petrie noted the survival of large numbers of pagan terra-cotta figurines well on into the fifth century. It would be very rash therefore on the available evidence to argue, as more than one writer has done,⁴⁴ that the cult of St. Menas grew out of that of a pre-existing pagan shrine. All we can say for certain is that here, as elsewhere, older beliefs died hard and were only gradually absorbed; and that here at the end of the third century was the cemetery of the little village of Este. It was in such a humble grave that the body of St. Menas was first laid.

Period II. The Primitive Oratory.

Whether any structure above ground marked the primitive catacomb we cannot now say. If it did, all trace has since been swept away; and the account in the *Encomium* is

⁴¹ See Cabrol, *Dictionnaire*, s.v. *Alexandrie*.

⁴² Kaufmann, *Menasstadt*, p. 66. The inscription of Father Paul contains the formula XMF, for which see G. Lefebvre, *Recueil des inscriptions antiques de l'Égypte*, Cairo, 1907, p. xxxii and on papyri and ostraka of the fifth and sixth centuries. At Alexandria it occurs on dated inscriptions of A.D. 537 and 570.

⁴³ Cabrol, *Dictionnaire*, fig. 284.

⁴⁴ R. Miedema, *De Heilige Menas*, Rotterdam 1913, chapter V; Meta E. Williams 'Whence came St. George?', *B.S.R.A. Alex.*, No. 30, 1936, pp. 79-109. The only specifically pagan objects quoted by Kaufmann are a terra-cotta figurine of Bes from the catacomb, and a small stele of Horus-Harpocrates (*Menasstadt*, fig. 24).

here too tinged with later colour to carry much weight. The first building of which we have any certain remains is the 'oratory like a tetrapylon', which was erected after the rediscovery of the body and of its miraculous healing powers. Little of this has survived;

ABU MÎNA — PERIODS I, III AND IV. THE ORIGINAL CATACOMB AND SUCCESSIVE CRYPTS

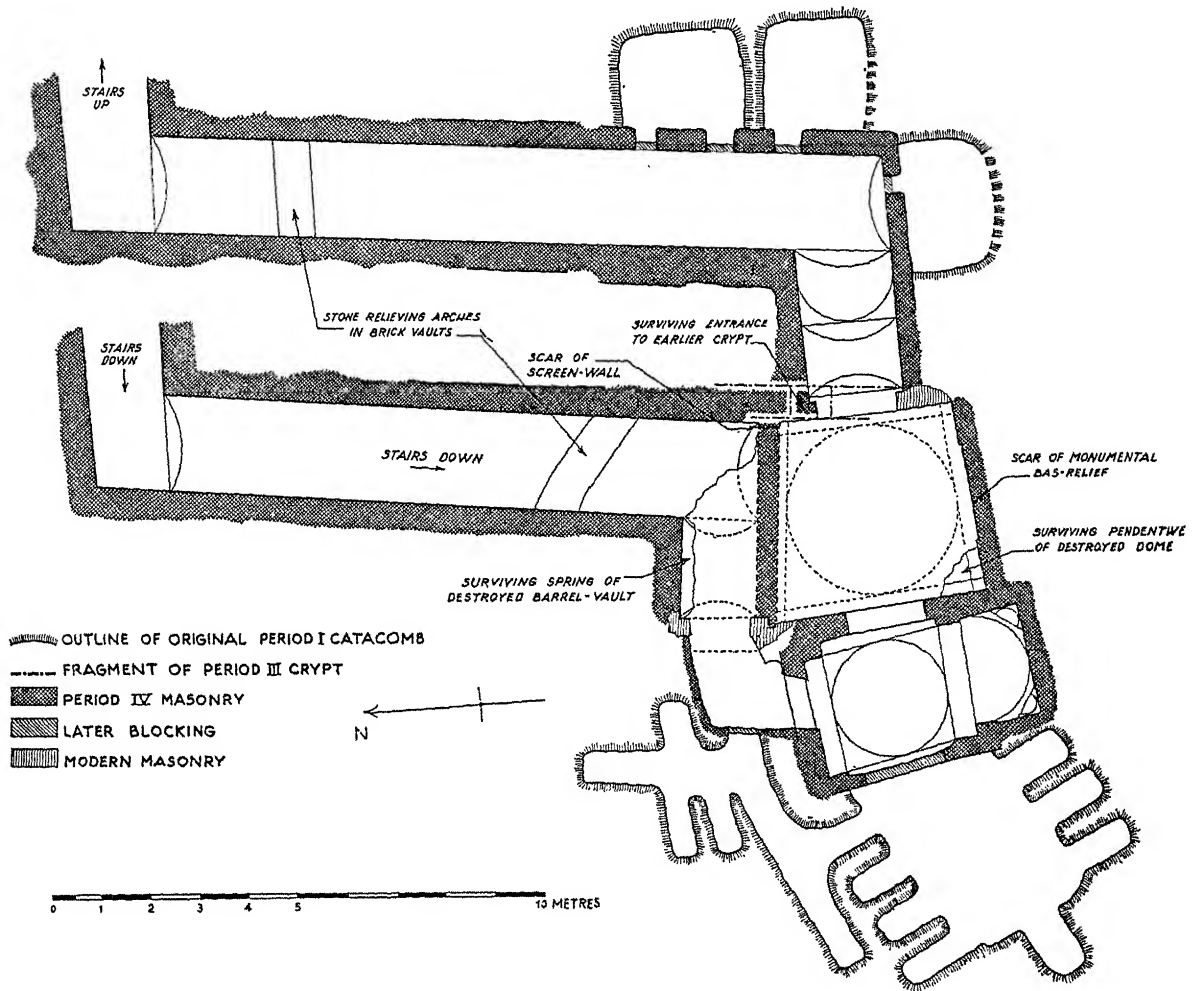

FIG. 1.—SUCCESSIVE TOMB-STRUCTURES BENEATH THE CHURCH

but fortunately that little is both distinctive in character and clearly dated in relation to the buildings which succeeded it.

Immediately to the east of the footing, which in Period IV carried the western arcade of the narthex of the Arcadian basilica, are two small apsidal plinths. These are constructed of mud-brick, roughly strengthened with limestone chippings. The upper and

outer faces are finished in smooth gypsum-plaster, with a bevel at the junction, while the inner face is rough and can never have stood free. At either end they are interrupted by walls of Periods III and IV, while the trample of builders' rubbish associated with the construction of the southern apse is cut by the foundation-trench of one of the transverse walls of the Period III sanctuary (Fig. 2).

Of the structure which stood upon these plinths nothing remains; nor is any other part of this building now visible, although it is very possible that some portion of it may survive beneath the later floor, to the west of the semi-circular *confessio* (if such it be) which marks the position of the tomb-chamber at the east end of the Period III nave. It is a reasonable presumption that the two apses flanked a third, central apse, and this would naturally suggest a chapel of simple basilical form. Unfortunately the nearest local analogy, the mud-brick chapel at Kurum et-tuwāl⁴⁵ is incomplete. It has three aisles, but the east end is missing. It is, moreover, undated.

A possible alternative is suggested by the description in the Encomium, 'a small oratory, like a tetrapylon'. This phrase would well describe the type of four-square domed tomb, sometimes open in the form of a four-way arch, sometimes enclosing a chamber, which was early current in Syria⁴⁶ and in Egypt and was to become such a common feature in the Islamic world. In the remarkable cemetery of El-Bagawât in the Kharga oasis the commonest form of well-to-do tomb chapel is a square structure of mud-brick with four shallow, arched recesses within, and a well-developed spherical vault with pendentives reaching down into the spandrels of the arches beneath.⁴⁷ There is only one door, but false arcading in stucco is used externally to give an architectural effect. Several of the buildings have in addition a single projecting apse on the side facing the entrance, although none has more than one. The cemetery was excavated many years ago by the Metropolitan Museum of New York. No final report was ever published, but in a brief interim report the excavators assigned it in general terms to the fifth century,⁴⁸ although it no doubt embraced in all a considerably longer period.

The literary evidence and general probability alike incline to suggest that it was in fact a building of this sort which first marked the site of the saint's grave and housed the lamp that burned night and day in his honour. The actual remains would more naturally be taken to belong to a small basilical structure. There can be no certainty without the excavation of the undisturbed area immediately to the west of the *confessio*.⁴⁹

Guyer 'Zwei spätantike Grabmonumente Nordmesopotamiens und der älteste Martyrgrabtypus der Christlichen Kunst', *Fünf Jahrtausend Morgenländischer Kultur: Festschrift Max Freiherrn von Oppenheim*, Berlin, 1933, pp. 148-56.

⁴⁷ W. de Bock, *Matériaux pour servir à l'archéologie de l'Égypte chrétienne*, St. Petersburg, 1901. The cemetery lies 5 km. north of el-Khargeh. De Bock's description is worth quoting: 'La plupart des tombeaux sont carrés à une porte, et ont une coupole. Des deux côtés de la porte, à l'intérieur,

deux pilastres dont un est toujours plus grand que l'autre, se détachent à angle droit du mur antérieur. Les coupoles reposent sur des arcs de soutènement adossés aux quatre murs, et leur hauteur dépend de la hauteur de ces arcs qui sont tantôt soubaissés, tantôt plein-cintre, ou même en ogive. Les coins entre les arcs sont remplis par les pendentifs des coupoles'.

⁴⁸ *Bulletin of the Metropolitan Museum of Arts, New York*, III, 1908, pp. 203-8.

⁴⁹ It has not seemed necessary to rebut in detail Kaufmann's many strange theories. It is perhaps well, however, to point out that the alleged existence of an octagonal Constantinian building is based upon the existence of two of the column-bases of the Period I building above the *confessio* (see pp. 48-9).

Period III. The Church of Saint Athanasius (completed soon after 375).

(a) *The Tomb.* At the same time as Athanasius built a 'spacious memorial church' in honour of St. Menas, he also converted a part of the early catacomb into a crypt, within which, in the presence of the assembled bishops, the saint's body was solemnly laid. This crypt was largely destroyed some thirty years later when, in Period IV, church and tomb alike were rebuilt. The east wall, however, of the later tomb-chamber incorporates a fragment of earlier masonry, including the greater part of an arch, which has been blocked by the brick vaulting of the later corridor (see Pls. V and VI, 1). This arch opened on to a barrel-vaulted passage, lined with plaster, which sloped upwards towards the east; and from its central position on the axis of the overlying church, it was probably the entrance to the actual tomb-chamber. The floor of the tomb was then some three or four feet above that of Period IV, and approximately on a level with that of the earlier catacomb.

The rest of the Period III tomb-chamber has vanished. To this period, however, probably belongs also the low-pitched foundation arch,⁵⁰ which marks the western boundary of the present semi-circular *confessio*. It is clearly designed to give stability to some heavy structure at the point where it crosses the underlying catacomb; but it seems an unnecessarily elaborate device if it were in fact contemporary with the Period IV walls which lie directly beneath it. These would appear rather to be a later insertion; and it was by their construction that the primitive catacomb was finally sealed. In Period III on the other hand the catacomb was apparently still accessible, to judge from the number of graffiti which Kaufmann found, some of which name the writer as 'Abba' and must belong to a time when there was an organised community at hand. One of these refers probably to the Emperors Valens and Valentinian and can be dated therefore between the years 364 and 375.⁵¹

One further feature can be assigned to this period. Within the extreme north-eastern corner of the ninth-century church lies part of a shaft, a metre square and nearly two metres in depth. The northern face of this shaft consists of one of the transverse foundations of the sanctuary of the Period III church, which it can therefore hardly antedate. On the other hand to the east it has been cut short by a foundation of Period IV. Except on this later eastern face it is lined with gypsum plaster, and to the west it opens, down a low step, on to a similarly surfaced, barrel-vaulted corridor. The corridor is cut short and blocked by the masonry of the eastern corridor of the Period IV crypt. Together shaft and corridor constitute a familiar type of tomb-entrance, of which at least one example has already been recorded from the Maryût, at Kurûm et-tuwâl, to the south of Amrîyah.⁵² But neither in character nor in its relation to the church does it suggest the formal entrance to the tomb of the saint, which probably lay on the axis of the church. It was perhaps the entrance to what remained of the early catacomb, which, as we have seen, was only finally sealed by the architects of the following period.

(b) *The Church.* Over the crypt Athanasius built a 'spacious memorial church'. Less than half a century later his successor Theophilus rebuilt it almost in its entirety

⁵⁰ Visible in Plate VIII, 4, extreme left. The original masonry is now much obscured by the restoration, undertaken by Breccia in 1926-7.

⁵¹ Kaufmann, *Menasstadt*, p. 65.

⁵² R. Eilmann, A. Langsdorf, and K. E. Stier, *op. cit.* pp. 106-29.

and to-day the foundations only of the earlier building remain. While there can be little doubt that excavation would recover the entire plan, at present much of it must necessarily remain conjectural.

ABU MÎNA - PERIOD III, A.D. 363 - 375

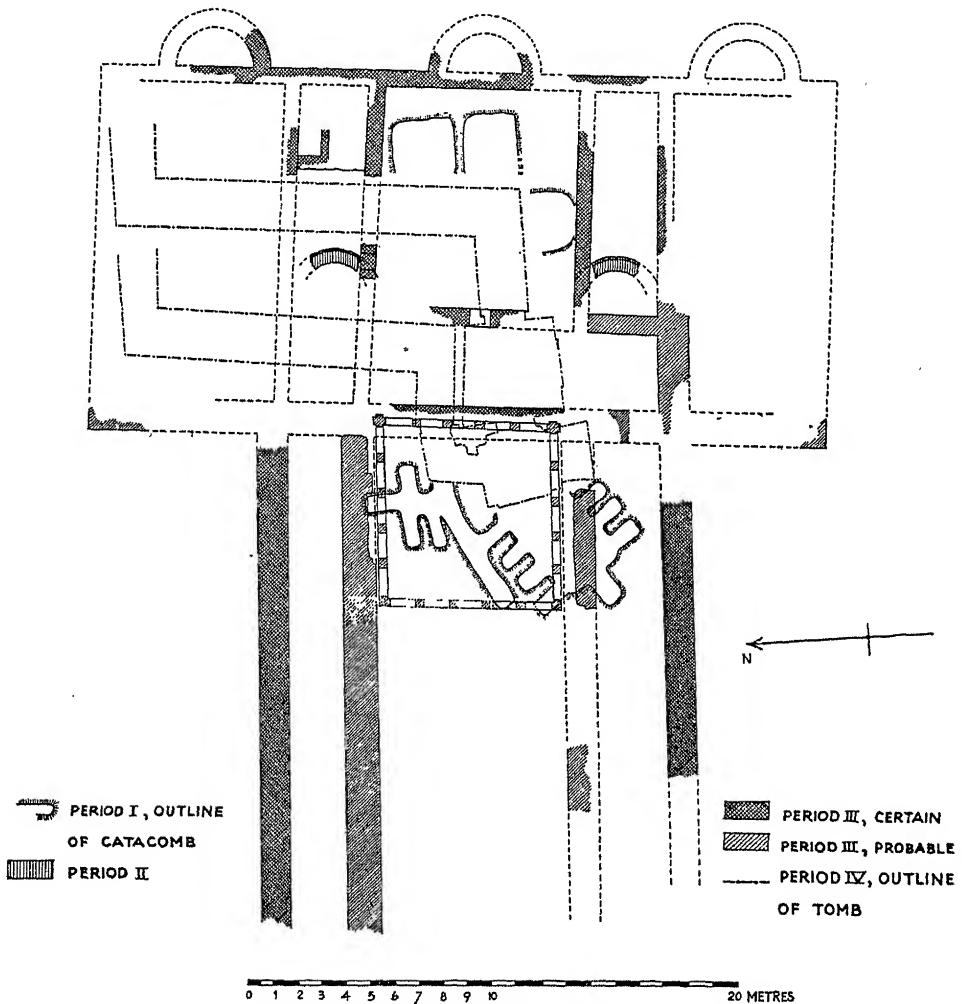

FIG. 2.—THE CHURCH OF ST. ATHANASIUS, AND REMAINS OF EARLIER STRUCTURES

Like its successor, it seems to have been built on a T-shaped plan, though on a smaller scale and with less markedly projecting transepts (Fig. 2). To the east extended semi-circular apses, probably three in number. These were destroyed, foundations and all, for the masonry they contained by the builders of Period IV, who left only the stumps of the central apse to carry the broader footings of the western entrance to the

new church, and that part of the northern apse which could be incorporated into the continuous footing of the northern arcade. Of a southern apse no trace is visible, although the scar of its northern abutment on the main eastern foundation might have been expected in the area exposed. It is most unlikely, however, that the church would in fact have been asymmetrical in this important respect.

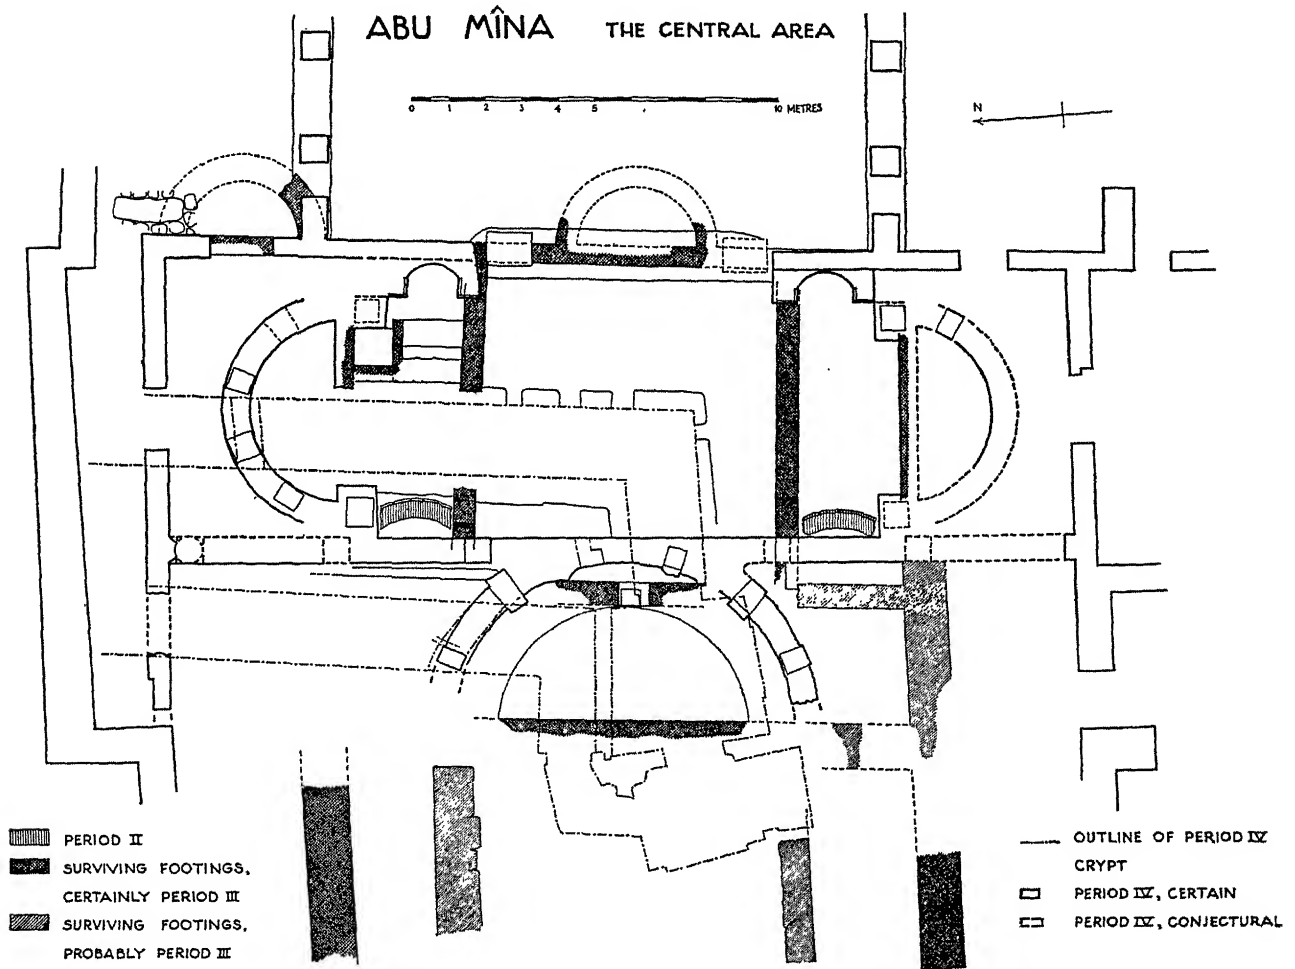

FIG. 3.—STRUCTURES IN THE CENTRAL AREA ABOVE THE TOMB (SHOWN IN DOTTED OUTLINE). NINTH-CENTURY ADDITIONS ARE OMITTED

The lateral and westward extent of the transepts cannot be determined beyond question without excavation; but they can be deduced with some degree of probability from a consideration of the work of the Period IV builders. It has already been noted that the shallow, arched foundation, which bounds to the west the present semi-circular shaft beneath the *confessio*, appears to be of an earlier date than the Period IV walls which underlie it (see p. 41). This foundation can be seen to extend southwards,

though it has been much interrupted by later work. Northwards it awaits examination. In both directions it is aligned on the projecting shoulders which at this point interrupt the outer walls of the Period IV building. These shoulders serve no very clear purpose in the Arcadian structure, which elsewhere follows a remarkably coherent and consistent plan, and it is reasonable to suppose that they are, in fact, the western angles of the Athanasian transept, which have been incorporated into the later design.

A singular feature of the plan of the eastern part of this church is the number of foundations, four in all, which divide it internally from east to west. While the outer pair probably delimit side-chapels, the inner pair are perhaps to be associated rather with the crypt and its entrance. Unfortunately both are masked at their western end by the overlying masonry of two succeeding periods. The depth of all the foundations in the eastern half of the church (in places 2 metres) is sufficiently explained by the existence of the catacomb beneath; and the same consideration must be held responsible for the considerable irregularity of the plan in its detailed lay-out.

Of the nave of Athanasius' church it is hard to speak with any certainty. The problem can be simply stated. On the site of the nave there exist three pairs of foundations running from east to west.⁵³ Of these the outermost pair belong, at least from ground-level upwards, to Period IV. In Period V the intermediate pair carried the outer walls of the nave, while the inner pair formed the continuous footing of the nave-arcade. The intermediate pair at any rate belong originally to Period III; for on the south side they can be shown to be contemporary with the presumed west wall of the transept. What is not certain is whether at this time this intermediate pair carried the outer walls of the nave or the columns of the nave-arcade. The plan (Fig. 2) illustrates conjecturally the former alternative, the proportions of which are, on the whole, the more convincing. Excavation would no doubt decide the matter.

A further possible line of enquiry is suggested by the existence towards the west end of the church of a cistern, in the form of a passage 80 metres long, which crosses the line of the nave from north to south and to which a well-shaft gave access immediately within the central western door. At three unspecified points within this cistern Kaufmann noted the existence of foundations, designed to support the footings of the church above. Two of these he states that he partially destroyed; but there can be little doubt that a re-examination of this cistern (which was not practicable to the writer) would yield evidence as to the relative dates of the overlying structures.

Period IV. The church of Theophilus, consecrated c. 400-10.

(a) *The Tomb.* The Encomium speaks only of the 'wondrous memorial church' which the Patriarch Theophilus added to Athanasius' church. It is clear, however, from a study of the actual buildings that at the same time he rebuilt and enlarged the crypt to meet the needs of the pilgrimage, and that in their present form the substructures are almost entirely his work. They consist of a lofty, barrel-vaulted staircase (Pl. V) leading down from the north side of the previous church to a central tomb-chamber on the site of the earlier tomb; to the west of the tomb-chamber is a small, square, domed chapel, with

⁵³ In addition there are possible traces of a range of column-bases immediately within the line of the intermediate pair of footings. One of these appears to be still *in situ* on the north side, and Kaufmann indicates, without

comment, a second on his plan (*Menassstadt*, fig. 22). On the south side can be seen the matrix from which a similar base may have been removed.

an antechamber at its northern end, while from the opposite side of the tomb-chamber a barrel-vaulted corridor leads to the east, then turns north parallel with the entrance-staircase, and finally east again, up a second flight of stairs, into the north-west corner of the new church. The walls throughout are of good ashlar masonry covered with a thick coating of coarse stucco, which served as a basis for a revetment of marble slabs. The vaulting is carried out in kiln-baked brick, widely jointed in a hard mortar and covered originally with stucco or mosaic ornament.⁵⁴ Kaufmann records a stucco pattern of rectangular coffers with central rosettes on the barrel-vault of the staircase; while a fragment of the figured gold mosaic from the domed chapel is preserved in the Greco-Roman Museum at Alexandria.⁵⁵ No doubt the tomb-chamber itself carried a similar mosaic decoration.

The building technique throughout is uniform, and the whole crypt was evidently planned as a unit. Its relation to the buildings above ground is, moreover, certain; for incorporated into the barrel-vaulting at two points, and integral to it, are two stone relieving-arches. These carried the footings of the central and northern semicircular exedrae, respectively, of the narthex (see pp. 48-9), both of which certainly belonged to the Period IV structure.

When the shrine was finally deserted the crypt was ransacked; and subsequently, as the church above fell into ruin, quantities of masonry and rubble collapsed into the vaults beneath. It is, however, still possible to obtain a fairly complete picture of the tomb as it was in the fifth century. The chapel to the west of the tomb-chamber is structurally all but intact, although the centre of the dome had fallen and has since been restored. The dome, which is of brick, is supported on spherical triangular pendentives, based on four irregular but roughly rectangular corner-pilasters, which in turn carry the arches of four shallow recesses (Pl. VI, 3). The curvature of the dome is distinct from that of the pendentives.⁵⁶ The southernmost of the recesses opens on to a small annexe with a brick half-dome carried on squinches (Pl. VI, 4).⁵⁷ This chapel is in many respects the counterpart, below ground, of the square tomb-chapels of the El-Bagawât cemetery (see p. 40). A deep shaft sunk in the floor of the annexe and a hole leading into the early catacomb are the work of later robbers. The irregularity of the masonry was concealed by figured mosaics on a gold ground, which probably covered the whole surface of the vault and possibly of the walls also.

The tomb-chamber itself has fared worse, and the surviving remains have been further obscured by the necessary work of restoration, undertaken some fifteen years ago. The whole of the northern half of the west wall and much of the southern part of the east wall are of modern masonry. It was originally divided into two unequal portions, of which the southern, and larger, part constituted the actual tomb-chamber, while at the northern end was a corridor by which the pilgrim was led from the foot of the staircase

⁵⁴ The peculiar structure of the vault is clearly visible in Plate V. The lower courses are laid flat and corbelled outwards, while the crown of the vault consists of bricks laid on edge. This method avoids the use of timber centering. Professor Monneret de Villard has pointed out to the writer that the technique is exactly paralleled in the aqueduct of Basatin at Cairo, built by Ibn Tulûn; K. A. Creswell, *Early Muslim Architecture*, vol. II, Oxford, 1940, p. 330, pl. 95b. But the date of the vaults of the Period IV crypt can hardly be questioned, and the similarity of technique must be taken as an instance of the

long life of a local tradition of brickwork.

⁵⁵ Kaufmann, *Menasstadt*, fig. 16. From the character of the masonry it is certain that this mosaic surface was envisaged at the moment of construction.

⁵⁶ See K. A. Creswell, *Early Muslim Architecture*, I, p. 319 and fig. 394, illustrating the vault after restoration. The latter should be compared with Pl. VI, 3, after Kaufmann, *Menasstadt*, pl. 8. Creswell (p. 319) is mistaken in saying that dome and pendentives are of the same curvature.

⁵⁷ Kaufmann, *Menasstadt*, pl. 9. 6 and 8.

through the antechamber and into the domed chapel, before passing into the actual tomb. The stump of the narrow partition-wall which separated the corridor from the tomb-chamber can be seen high up in the eastern wall (Pl. VI, 1); also the spring of the vault over the tomb-chamber, while the northern face shows traces of a barrel-vault, similar to that of the staircase, but at right angles to it and at a lower level (visible in Pl. VIII, 4). The semicircular shaft down to the tomb-chamber, so marked a feature of the surviving remains, had no visible counterpart in antiquity. It was a concealed structural feature, designed to ensure the stability of the exedra and of the *confessio* above, and has only since been revealed by the collapse of the underlying vaults.

The tomb itself was originally vaulted, possibly with a brick dome similar to that of the adjacent chapel, but more probably, in view of the limited height available, with a spherical vault. This would have been the 'great dome below the building', which El Bekri saw (p. 36). A fragment only remains, in the south-western corner; but the character of this fragment is distinctive, for it includes portions of the archivolt spanning two of the recesses and of the pendentive between them.⁵⁸ It is possible that in this case the brick corner-pilasters, of which there is no trace, were replaced by marble colonnettes. In the centre of the southern wall of the tomb-chamber is the matrix of a large slab, 1.80 metres in breadth and recessed 2 centimetres more deeply than the surrounding marble revetment.⁵⁹ Here without doubt was the great image of St. Menas, standing with hands upraised in prayer between two camels. Thus he is depicted on the small marble relief, very possibly a copy of that in the parent shrine, from the associated monastery of St. Thekla at Ennaton, near Alexandria (Pl. VIII, 1).⁶⁰ Thus, too, on an early fresco from the chapel of Karm Abu Girg in the Eastern Maryût (Pl. VIII, 2),⁶¹ on the ivories of Alexandria,⁶² and universally on the ampullae. It is true that El Bekri, a most intelligent observer, described it as the statue of a man standing upon, and not between, two camels; but in the face of the consensus of ancient representations, it is hardly likely that the archetype should have so differed from all its copies.

It is probably no accident that the staircase leading down to the tomb is so aligned, askew to the axes both of the tomb and of the church, as to have given the descending pilgrim free vision of the site of the image from the moment that he reached the head of the stairs. Kaufmann records the discovery of quantities of charred wood in the tomb-chamber, and the partition-wall between the tomb-chamber and the entrance-corridor to the north may well have consisted in part of an open-work wooden screen.

Of the other internal fittings of the tomb it is impossible to speak with any certainty. The only light, other than that from the entrance staircase and from the sacred lamps to which the texts refer, came from a small shaft leading down from the back of the exedra above to the centre of the east wall of the tomb-chamber. The tomb itself has vanished with the image, but from the presence of the exedra above, it is reasonable to conjecture that it stood free near the screen wall, opposite the image and axially to the

⁵⁸ For the surviving angle of the vault see Kaufmann, *Menastadt*, pl. 9, 1.

⁶¹ Ev. Breccia in *Municipalité d'Alexandrie: rapport sur la marche du service du musée*, 1912; see also De Cosson, *Mareotis* pp. 147-9. The frescoes, which are now in the

Museum at Alexandria, decorated a mud-brick building, which was later rebuilt in stone. They reveal certain analogies with the frescoes at Bawit.

⁶² An ivory pyxis in the British Museum, *B.M. Catalogue of the Ivory Carvings of the Christian Era*, p. 11, pl. vii; a panel from the Bishop's throne at Grado, now in Milan Museum, Cabrol, *Dictionnaire*, vol. I, 1114, fig. 270.

church above. Add the marble floor and the walls and the gilded mosaics of the vault, and it is not difficult to imagine the chamber which, for nearly nine centuries until the final destruction of the shrine, held the relics of St. Menas.

(b) *The Church.* The church itself was completely excavated and described by Kaufmann, and the plan which he published has since passed into the standard works of reference. Though devised on opulent lines it presents few complexities, and Kaufmann's account is here least unsatisfactory. The ground-plan is that of a T, with a single, projecting apse. The nave is of normal three-aisled basilical form. The transepts, also of three-aisled basilical form, have in addition a rudimentary terminal aisle, which gives the effect of an ambulatory. The terminal aisle is a common feature of Coptic churches elsewhere,⁶³ as also is the use of decorative apsidal recesses (at Abu Mīna characteristic of Period IV), one of which can be seen at the end of each transept. Nave and transepts alike were composed of a double order, with *matronea* over the lateral aisles.⁶⁴ On the north side of the nave a door leads into the adjacent domestic quarters, and on the south a triple doorway, flanked by columns on octagonal bases (Pl. VII, 2), constitutes the main entrance from the southern courtyard and from the street beyond.

The masonry throughout is somewhat roughly coursed, and is less fine than that of the Athanasian church. Characteristic also of all the Period IV work is the use of a brick bonding-course, made up of kiln-baked bricks measuring 25 by 12 by 6 centimetres. The rather summary character of the masonry is readily explained by the elaborate decorative veneer with which it was covered. As in the crypt, the walls were faced with panels of marble set in a thick bed of coarse stucco, often mixed with potsherds, and the floor was paved in part at least with large square slabs of the same material. Both were removed in the ninth century, and only a few broken fragments now remain. These are all of a fine-grained island marble, white banded with irregular grey streaks; but the Encomium speaks also of coloured marbles and of the 'unequalled pavement, which was composed of all colours'; and elsewhere two of the decorative niches of Period IV still retain traces of polychrome marble panelling.⁶⁵ The columns of the two orders of the nave and transepts were removed at the same time as the pavement, but it would appear that these were throughout of the same white, island marble.

The roof was undoubtedly of timber. The span of the nave (14.8 metres) was considerable. The roofing of the junction of nave and transept must have presented a considerable problem, for the corner-columns are uniform with the rest of the arcade and no provision is made to carry any extra weight. Kaufmann records that at this point he found considerable traces of fallen gold mosaic. The position of the high altar, in the centre of the crossing and at the focal point of the whole architectural plan, is marked by the four bases of the canopy that sheltered it. Around it, occupying almost the whole area within the four angle-columns of the crossing and extending a short distance towards the apse, ran a rectangular chancel screen. At the back of this chancel, with its back to the apse and facing the altar, stood a raised dais, gently curved and stepped on

⁶³ See below, section D, p. 55.

⁶⁴ The elements of the double order are summarily illustrated by Kaufmann (*Menasstadt*, p. 89, fig. 39), who removed the best of the surviving architectural detail to Frankfurt. Professor Monneret de Villard, who has inspected this material, questions the use of a flat architrave,

of which there is now no trace. But perhaps the iniquitous Lazarus did his work too well. For the column-bases, see Pl. VII, 1, and p. 63.

⁶⁵ In the narthex, retained by the Period V builders (Pl. III, 1, and Fig. 4). Traces of coloured marble revetment were also found in the baptistry.

the western face. It was presumably a bench for the officiating clergy, and may in very general terms be compared with the free-standing internal apse of the Pre-Eufasian basilica at Parenzo;⁶⁶ but no close parallel is forthcoming. Behind the dais, and outside the chancel, the octagonal bases of an open, colonnaded screen follow the same gentle curve to demarcate the main apse. Two tombs, the remains of which it overrides, belong to an earlier phase of the site's history.⁶⁷ From the centre of the western side of the chancel a narrow passage extended down the axis of the nave. It led undoubtedly to the ambon, the seatings of which would perhaps be revealed by careful excavation.

The narthex occupied the site of the east end of the Athanasian church and was itself superseded in the ninth century by the sanctuary of the Period V church. It consisted, in effect, of a portico linking the old and the new buildings. The western side was colonnaded and opened directly on to the nave of the Athanasian church, while on the east a great central door, flanked by ornamental recesses, formed the main west door of the Theophilan church, with two smaller doors opening into the side-aisles. The northern and southern ends of the rectangular space so enclosed were shut off by two apsidal, arcaded screens; and a third screen, of the same form but slightly larger, stood in front of the western arcade immediately over the tomb-chamber of the saint. The character of these screens is hardly in doubt, for at Deyr el-Abiad, Sohag, a similar screen blocks one end of the narthex. The latter example carries a brick half-dome, and may be considered as an elaboration of the shell-headed, apsidal recesses of the narthex at Dendera.⁶⁸ There can be little doubt that at Abu Mîna, too, these screens were half-domed in brick over a marble cornice, in conformity with the surviving Period IV brickwork in the crypt and in the baptistry; and that above them a facing of brick was carried up to roof-height. It has already been noted that at the two points where the foundations of the narthex run across the lines of the underlying crypt, the brick vaulting of the latter is strengthened by the addition of stone relieving-arches, proving beyond doubt that the two structures above and below ground are contemporary.

To the west of the narthex lay the nave of the Athanasian church. Without excavation, and without a further knowledge of the plan of the earlier building, it is not possible to say how far the work of Theophilus conformed with, and incorporated, existing structures, and how far it involved the complete rebuilding of the Athanasian nave. The text of the Encomium certainly suggests that a substantial part of the earlier church remained 'to be made one with' the new building. On the other hand it is quite clear that in their present form the existing outer walls of the nave are of Period IV workmanship, with a brick bonding-course and ornamental recesses (Kaufmann, *Menasstadt*, pl. 10). This would seem to imply a more radical reconstruction, and the plan is certainly suggestive of a conventional atrium-narthex lay-out. Where so much is uncertain, however, analogy is a dangerous argument; and pending excavation it is perhaps wiser to leave the matter open.

To this period certainly belongs the semicircular screen which marks the site of the

⁶⁶ B. Molajoli, *La Basilica Eufasiana di Parenzo*, Padova, 1943, pp. 17-28; P. Verzone, *L'architettura religiosa dell'alto medioevo nell'Italia settentrionale*, Milan, 1942, p. 49. Cf. also S. Croce, Ravenna, Verzone, *op. cit.* pp. 9-10.

⁶⁷ Kaufmann, *Menasstadt*, pl. 59. These tombs have

nothing to do with the Period IV structure, as Kaufmann suggests, but precede it.

⁶⁸ U. Monneret de Villard, *Les Couvents près de Sohag*, Milan, 1925, vol. I, fig. 52 (plan). *Atti IV Congr. Arch. Crist.* p. 303, fig. 9.

*confessio*⁶⁹ and of the tomb beneath; perhaps also the remains of a square screen of marble posts and slabs, doubtless the enclosure for an altar, in the centre of the nave immediately to the west of the semicircular screen. Superficially it could belong equally well to Period V, but both in character and in position it belongs far more naturally to the fifth century than to the ninth. It may alternatively be a relic of the Athanasian church. Here again excavation would doubtless decide.

At the extreme west end of the whole complex stood the baptistry. The brick bonding-courses, the use of ornamental recesses, and the technique of the brick vaulting, all betray the work of the Period IV architects; while on the north side it can be shown to be of one build with the Period IV outer wall of what had been the Athanasian nave. It was considerably modified at a later date, but the later work is structurally clearly distinguishable, and nowhere are the main lines of the earlier building in doubt. It consisted of a central baptistry chamber, flanked on the south by an antechamber with a single row of columns running down the centre,⁷⁰ on the west by a passage, and on the north by a chamber of uncertain character, since much modified. The baptistry itself is octagonal internally and was covered by a brick dome, of which substantial parts were found by the excavators, fallen intact.⁷¹ The crown of the dome was marked by a cross worked into the pattern of the brickwork, a *jeu d'esprit* which can never have been visible in the completed work. The alternate faces of the internal octagon contained recessed niches, and there were similar but smaller external niches facing on to the passage on the west side.⁷² In the centre, beneath a canopy, was a sunken circular basin, entered from the east and from the west by flights of steps⁷³ and identical in design with the basin in the baptistry of the cemetery-church.⁷⁴ Internally, the baptistry-chamber was elaborately ornamented with gold mosaic on the dome and with white and coloured marble on the walls and floor. Here, too, were found portions of three small capitals, with eagles displayed at each corner flanking a chalice; and of three low-relief pilaster-capitals with simple foliate ornament.⁷⁵

Period V. Patriarch Joseph's Church A.D. 833-49.

After Lazarus' workmen had done their work and stripped the sanctuary of its columns, its pavements, and the marble from its walls, the Patriarch Joseph was faced with a destruction so complete that there could be no question of rebuilding the great Period IV church of Theophilus. True, the Encomium speaks as if this were done; but the surviving remains show that in fact it was abandoned, and that he had to be content with a far more humble structure, on the site of, and following the same general lines as, the Period III church of Athanasius, but slightly reduced in scale. This is in the main the building which Kaufmann identified and published as the 'Grave-Church' (*Grufkirche*) of Athanasius. The most superficial examination proves, however, that while this 'Grave-Church' incorporates some earlier structures, particularly of Period IV,

⁶⁹ If indeed it be a *confessio* proper. The present semi-circular shaft is a structural feature only, and was invisible when the tomb-chamber below was vaulted. There are, however, traces of a small shaft leading down into the tomb-chamber from the base of the columnar exedra above. For the significance of the semi-circular screen, see p. 59.

⁷⁰ Kaufmann, *Menastadt*, pl. 40.

E

⁷¹ *ibid.* pl. 38.

⁷² *ibid.* pl. 36.

⁷³ *ibid.* pl. 37.

⁷⁵ Capitals, see Kaufmann, *Menastadt*, pl. 66, nos. 2, 4, and 6; the best preserved of these is in the Greco-Roman Museum at Alexandria (Inv. No. 17445). Pilaster-capitals, see p. 64, pl. ix. 4.

it is in fact the latest building on the site and is, therefore, beyond any reasonable doubt, the work of the Patriarch Joseph between 833 and 849. Both the plan and the character of the building are in accordance with this identification.

This latest church is built of very mixed, and mainly bad, masonry. The north and south walls of the Sanctuary are partitions or rubble. The surviving stretches of the nave-walls are also of rubble construction, but more robust and with an uneven plastered surface. They incorporate several marble bases taken from the Period IV church (Pl. VII, 3). These bases were already in damaged condition when used by the Period V builders, a circumstance which no doubt explains why they were not taken by the rapacious Lazarus. In curious contrast to the generally poor quality of the masonry is the projecting eastern apse, a stout ashlar structure, better than anything built in Period IV and equalled only by the remains of the Period III church. The relative date of this apse is, however, beyond question. Not only does it block the great west door leading from the narthex into the central nave of the Period IV church, but its footings can be shown to be trenched into the make-up of the Period IV floor, which in turn overlies the surviving foundations of the central Period III apse.

The plan of this latest church is extremely simple. The Sanctuary consists in effect of the narthex of the Period IV church, slightly narrowed by the insertion of two partition walls, which cut right across the foundations of the two lateral exedrae. To the west the intercolumniations of the narthex-arcade were partly blocked to cut off the Sanctuary from the body of the church; while to the east a single projecting apse fills the gap where was formerly the main west door of the earlier church. By a coincidence, of which the builders were certainly unaware, the apse lies almost directly over the foundations of the central apse of the Period III Athanasian church.

A curious feature of this later apse is that it does not fill the entire gap. On either side, a narrow passage leads into the body of the old church beyond, and the wear of the threshold shows that these passages were much used. Presumably they led to the monastic quarters, which still lay to the north of the site of the Period IV church. The two decorative niches, which had flanked the main doorway in Period IV, now in effect became apsidal recesses on either side of the main apse. By every analogy the Sanctuary would have been divided longitudinally into three by screens, probably of wood, but of these no trace now remains.

Of the body of the church very little can be said. Time and the excavator have stripped it bare. On the southern side a stretch of walling with a door shows that the outer walls lay within the span of the outer Period IV walls and were built upon the intermediate pair of longitudinal foundations described above (p. 44). That the inner pair carried an arcade in Period V cannot be regarded as proved, but by analogy with contemporary Coptic Architecture it is highly probable.

D. ARCHITECTURAL FEATURES OF THE SUCCESSIVE CHURCHES

The purpose of the present article is rather the presentation of certain fresh facts regarding an important monument than the detailed discussion of the problems of comparative architectural history to which it gives rise. Nevertheless, it may prove

useful in the following section to call attention briefly to certain distinctive elements, of which account must be taken in any more detailed study.

Transepts. The Athanasian church and its successor are alike distinguished by the addition of a transept to the ordinary basilical plan. There, however, the similarity begins and ends. The transept of the Athanasian church is subdivided into a series of compartments by walls or screens running parallel to the major axis of the church. The roof-plan must have suggested an organic unity, focused at the crossing, which is not in fact reflected in the ground-plan. The Theophilan church is by comparison a thoroughly homogeneous and purposeful building, in which every accent converges upon a single point, the high altar in the centre of the crossing of nave and transepts. The distinction, which is one of considerable importance for comparative studies, is without doubt based upon a divergence of function.

The transept, whether contained within the rectangular perimeter of the main building or projecting to form a T, but in either case distinguished by a roof set at right angles to the main axis of the building, had a wide, though scattered, currency in the early church. Its origin has been the subject of a considerable literature, in which the issue has often been sadly confused by the attempt to squeeze all the surviving examples within a single mould.⁷⁶ The most recent discussion of a part of the field is a characteristically lucid article by Krautheimer, based upon his researches in the church of S. Pietro in Vincoli in Rome.⁷⁷ In this he shows that the original fabric of the present church of S. Pietro, built in the early fifth century, had a well-marked projecting transept, which was clearly divided internally into a central bay and wings. In the original scheme this division was to have been achieved by screen-walls with three openings in their upper parts and some form of arcade below. This scheme was in fact modified during construction, but the distinction between central bay and wings remained. This 'tripartite transept' is, as Krautheimer shows, certainly derived from Greece, where it is one of the common types of early church.⁷⁸ In some cases the subdivisions are marked by arcades, in others by projecting pilasters, which may or may not have carried an arch similar to that between the central compartment of the transept and the nave. In both types alike the tripartite division is further emphasised by the detailed arrangement of the internal fittings. Chancel-screens flank the central compartment to form a kind of forechoir or continuation of the apse towards the nave, whereas the wings are in effect separate rooms, set apart alike from the central bay and from the nave-aisles, with which they communicate only through well-marked doors, often with secondary screens. There can be no doubt that this distinctive form was evolved in response to the requirements of a developing church ritual; or that in function it broadly corresponds to the pastophories which flank the chancel in Syrian and North African early church architecture.

⁷⁶ This literature is well surveyed by J. P. Kirsch, 'Il transetto nella basilica cristiana antica', *Scritti in onore di Bartolommeo Nogara*, Rome, 1937, p. 205 ff.

⁷⁷ R. Krautheimer, 'S. Pietro in Vincoli and the tripartite transept in the Early Christian Basilica', *Proceedings of the American Philosophical Society* LXXXIV, 1941, 353-429.

⁷⁸ The churches in question are churches A and B at Nikopolis; and the churches at Epidauros; at Arkitsa-Daphnusia, near Lokris; at Corinth; and by the Ilissos,

near Athens. The church at Dodona also may perhaps be considered as a later (sixth-century) example. Evidence for these buildings is summarised by G. A. Soteriou, 'Αἱ παλαιохριστιανικαὶ βασιλικαὶ τῆς Ἑλλάδος', *Arch. Eph.*, 1929, pp. 161-248; see also 'Die altchristlichen Basiliken Griechenlands', *Acti IV Congr. Arch. Crist.*, pp. 355-80; and Krautheimer, *op. cit.* pp. 417-23. For Corinth, see *Hesperia*, xii, 1943, pp. 166-189.

Outside Greece a solitary instance of the tripartite transept can be seen in Church I at Bosra, in Syria.⁷⁹ Otherwise S. Pietro in Vincoli stands alone, and is rightly regarded as an intruder into the Roman series, introduced from Greece. None of the Greek churches of this form is precisely dated; but several are certainly of the fifth century, and there seems no reason to doubt the conventional attribution of the whole group to the same century, or in some cases possibly to the closing years of the fourth.⁸⁰ It may, or may not, prove to be significant that the church at Epidauros, the only one in which the transept is further subdivided, as in the Athanasian church at Abu Mîna, into five compartments, is considered to be an early member of the series.

With the great Period IV church we are on very different ground. It has nothing whatever to do either with the Greek tripartite transept or with the tall, narrow, continuous transept interposed between the nave and the apse of the two great Constantinian basilicas in Rome, St. Peter's and St. John Lateran. Whatever be the purpose of the latter, it is quite clear that, outside Rome in the fourth century, it was singularly without influence on contemporary church architecture, and only came into its own four centuries later when it was adopted as part of the self-conscious revival of classical types characteristic of the Carolingian renaissance.⁸¹

In marked contrast to either of the above-mentioned types the Period IV church is distinguished by its architectural unity. Nave and transepts are not juxtaposed elements but part of an integrated whole radiating from a common centre. This unity of plan is a characteristic shared with the cruciform *memoria*, a well-attested early type, which seems to have been associated particularly with the martyr-cult.⁸² Guyer may be right in attributing to the cruciform *memoria* a decisive initial influence in the development of the type of transept under discussion. In the present state of knowledge it is, however, prudent to recall that there is still a link missing in the evidence, for as yet no symmetrically planned, cruciform, basilical church has been identified from the fourth or fifth centuries. All—Salona, the pre-Justinian church of St. John at Ephesus, the church of the Martyrs and Apostles at Gerasa, and perhaps H. Demetrios at Salonica⁸³—to a greater or lesser extent emphasise the major axis, and to this extent deviate from the pure cruciform plan. The earliest dated example, the Theophilan church of St. Menas, lacks the eastern arm altogether. It is open to argument that the influence of the cruciform *memoria* was rather that of the later assimilation of an established type than the provision of the initial impulse.

⁷⁹ H. C. Butler, *Early Churches in Syria*, Princeton, 1929, p. 118 f.

⁸⁰ Soteriou, *op. cit.* passim; Krautheimer, *op. cit.* pp. 422–3.

⁸¹ R. Krautheimer, 'The Carolingian Revival of Early Christian Architecture', *Art. B. Rev.*, N° XIV, 1942, pp. 1–38.

⁸² Most recently and fully studied by A. Grabar, *Martyrium*, Paris, 1946 (available to the writer only when this article was in proof). See also S. Guyer, 'Beiträge zur Frage nach dem Ursprung des Kreuzformig-basilikalen Kirchenbaus des Abendlandes', *Zeitschrift für Schweizerisches Archäolog. u. Kunstgesch.*, VII, 1945, pp. 73–104.

A longer work which this author has in preparation. Guyer is followed by Krautheimer ('S. Pietro in Vincoli etc.', pp. 413–17), who strangely quotes the Theophilan church of St. Menas as the best example of the basilica with central tomb and radiating transepts.

⁸³ Early cruciform basilical churches:

Salona (490–540): R. Egger and W. Gerber, *Forschungen in Salona*, I, Vienna, 1917, p. 23 ff.; Dyggve, *Atti IV Congr. Arch. Crist.*, pp. 391–414.

Ephesus (not precisely dated, but pre-Justinian): J. Keil, 'Vorläufiger Bericht über die Ausgrabung in Ephesos', *Jahreshefte d. Oesterreichischen Arch. Inst.*, Beiblatt XXVII, 1932; Guyer, *Atti III Congr. Arch. Crist.*, p. 438, fig. 5.

Gerasa, ch. of the Martyrs and Apostles (464–465): J. W. Crowfoot, *Gerasa*, New Haven 1938, p. 256 ff.; and *Early Churches in Palestine*, London 1941, pp. 85–8, fig. 8.

Salonica, H. Demetrios (?412–413): I follow Krautheimer, 'S. Pietro in Vincoli' etc., pp. 415–16 and footnote 216.

The group is discussed by Guyer, *Atti III Congr. Arch. Crist.*, pp. 433 ff.; and by Crowfoot, *Gerasa*, pp. 190 ff.

It is well also to be cautious in assuming, formally or by implication, a uniformity of liturgical usage and thought in an age which was still very much feeling its way. Of the two known fourth-century examples of the cruciform *memoria*, with four radiating arms of equal length, the one at Antioch-Kaoussié, dated 379–80, commemorates a local martyr, St. Babylas;⁸⁴ the other housed Jacob's well at Sichem.⁸⁵ It should be noted that whereas in the latter it was the object of veneration which occupied the centre of the building, at Antioch this position was reserved, not for the actual tomb of the martyr, but for the altar of the church.

We find the same diversity in the big early transeptal basilicas. In the pre-Justinian church of St. John at Ephesus the tomb of the saint stood within a central tomb-chapel, which opened to the north, south, and west upon three radiating basilical naves; the fourth side was closed by an apse, excluding the wide five-aisled nave which projected eastwards to complete the cruciform plan. In the great Theophilan church of St. Menas, on the other hand, it was the chancel and the high altar which occupied the centre of the radiating plan; the body of the Saint lay right outside the church, in a crypt to the west of the main door, a strange position indeed if employment of the cruciform or of the transeptal plan be held to depend upon an architectural tradition, or liturgical usage, in which the object of veneration coincided with the point of maximum architectural emphasis.

At Abu Mîna the purpose is surely clear. This was a great church, built, we are told, because its predecessor 'could not hold the multitudes, but they were standing outside in the desert' (p. 33). The lay-out was a simple and effective way of ensuring, for the maximum number of pilgrims, a close and uninterrupted participation in the rites and ceremonies of the central sanctuary. Precisely the same considerations faced the architect of any church that was the object of a popular pilgrimage with a specific martyr-cult. It is hardly surprising that the same solution should have been adopted elsewhere, and for the same reason. The church at Ephesus, which in plan most nearly approximates to the Theophilan church of St. Menas, was itself the goal of many pilgrims. Fifty years later an identical expedient was to be adopted in another great centre of pilgrimage, the church of Kala'ât Sim'ân near Antioch, with its four basilical arms radiating from a central octagon, in which stood the object of veneration, the column of St. Simeon Stylites.⁸⁶ Here, as at Ephesus, the easternmost arm was separated from the rest of the building, for the use of the officiating clergy.

Locally in Egypt the transeptal plan had little or no influence outside the narrow coastal belt of which the sanctuary was the natural centre. At Abu Mîna itself it was followed in miniature by the builders of the small detached chapel to the east of the shrine;⁸⁷ and its influence can certainly be detected at Abu Sir (Taposiris), ten miles away on the coast near Burg el-Arab, in the plan of the first church to be built (c. 390–400?) on the site of the former temple of Osiris.⁸⁸ To it can probably be traced

⁸⁴ J. Lassus and G. Downey in *Antioch-on-the-Orontes*, vol. II, Princeton, 1938, pp. 5–48; *Atti IV Congr. Arch. Crist.*, p. 340, fig. 4.

⁸⁵ Known from a seventh-century drawing by Arculf, reproduced in Migne, *Patrologia latina*, LXXXVIII, col. 802; and *Atti III Congr. Arch. Crist.*, p. 439, fig. 6.

⁸⁶ Most recently and convincingly studied, on the basis of excavation in the east church and octagon, by O.

Krencker and R. Naumann, *Die Wallfahrtskirche des Simeon Stylites in Kala'ât Sim'ân* (Abh. d. preuss. Akad. d. Wissenschaften, 1938, Phil.-Hist. Klasse, 41) Berlin, 1939. The central octagon almost certainly carried a wooden dome.

⁸⁷ Kaufmann, *Menasstadt*, fig. 46–7.

⁸⁸ J. B. Ward Perkins, 'The Monastery of Taposiris Magna', *B.S.R.A. Alex.*, No. 36, 1945, pp. 3–8.

also the use of a transept in the early fifth-century church at Apollonia in the Cyrenaican Pentapolis, a district which was at this time strongly under the influence of Alexandrian Christianity.⁸⁹ In upper Egypt, on the other hand, the transept is never found.

Nave Ambulatories. In contrast to the incorporation of a transept, a clear link with later Coptic architecture is afforded by the provision, albeit apparently in a rather specialised form, of a third aisle at the end of each transept in addition to the two lateral aisles of the normal basilical plan. This is a typical feature of later Coptic church-planning, found already in the mid-fifth-century monasteries at Sohag and frequently adopted later. At Abu Mîna, too, it was used also in the cemetery church.⁹⁰

The plan of the terminal aisle given in Pl. XI is based on that published by Kaufmann and on the remains superficially visible. It raises certain structural difficulties, particularly in relation to the upper galleries of the transept. These would naturally have been expected to conform to the ambulatory plan of the ground floor. Instead, if the plan as given is correct, the central section of both orders must have been occupied by a wide and lofty arch, reaching nearly to roof-height and giving in a more open form something of the impression of the 'triumphal arch' customary at the junction of nave and transepts. Confirmation of this feature, as indeed of several other details of the Theophilan church, would require careful re-excavation. In the meantime a note of caution is desirable.

The ambulatory is not common in early Christian basilical planning. Monneret de Villard quotes several Syrian examples. It was, however, a form thoroughly established in civil architecture and so well adapted to the special needs of a pilgrimage church, that it is hardly necessary to look farther afield in search of parallels. It remains in that case problematical whether its subsequent employment in Coptic architecture is due to direct borrowing from Abu Mîna or whether both alike derive from a common local tradition of civil architecture.

Three Projecting Apses. Projecting from the east wall of the fourth-century Athanasian church were two, almost certainly three, apses. The plan is markedly individual. But even in a more stereotyped form the use of three projecting apses is rare and sporadic, and nowhere demonstrably early. Examples known to the writer of early basilical churches with this feature are:

GREECE

Hypate: G. A. Soteriou, *Arch. Eph.*, 1929, 186-7, and fig. 19. Known from sketch-plan only. Considered by Soteriou to be post-Justinian.

Nikopolis: G. A. Soteriou, *Atti IV Congr. Arch. Crist.*, p. 361, fig. 6. Central apse has two external buttresses. Considered by Soteriou to be post-Justinian.

ROUMANIA

Ibida: D. Ciurea, *Atti IV Congr. Arch. Crist.*, p. 388 and pl. 11. Not dated.

SYRIA

Kal'ât Sim'ân, the east church, c. 460-90. See p. 54, n. 86.

⁸⁹ P. Romanelli, *Atti IV Congr. Arch. Crist.*, 1938, p. 274, fig. 23; J. B. Ward Perkins, *Bulletin de la Société d'Archéologie Copte* IX, 1943, pp. 126-31.

⁹⁰ U. Monneret de Villard, *Atti IV Congr. Arch. Crist.*,

p. 315, lists all the Egyptian examples of this form and illustrates several, including the cemetery church at Abu Mîna (after Kaufmann, *Menasstadt*, fig. 46).

PALESTINE

Yarûn (Galilee): C. R. Conder and H. H. Kitchener, *The Survey of Western Palestine*, 1, London, 1881, p. 258. Brought to my notice by Professor Monneret de Villard. See, however, S. W. Crowfoot, *Atti IV Congr. Arch. Crist.*, p. 324, and *Early Churches in Palestine*, London, 1941, who states that the projecting triapsidal plan does not occur in Palestine.

TRANSJORDANIA

Pella (Khirbet Fabil), two churches, both with three projecting apses. J. Richmond, *Pal. Explor. Fund Quarterly Statement* 1934, pp. 26-9 and pl. V; also A. M. Schneider, 'Sudjudaische Kirchen', *Zeitschr. d. Deutsch. Pal. Vereins* LXI, 1938, 106, fig. 20. Brought to my notice by Professor Monneret de Villard.

This form does not appear to be found in the western Mediterranean. In southern Palestine and Sinai the form with three inscribed apses is certainly both relatively early and common; but only exceptionally is the line of the outer wall broken, and then only by the partial projection of the central apse.⁹¹

The source from which the architect of St. Athanasius' church derived this unusual feature is happily beyond dispute. The one certain fact about the mud-brick chapel, which earlier marked the grave of St. Menas, is that it possessed two projecting apses flanking a destroyed central feature. It is not unduly fanciful to conjecture that the remoter origins, too, are to be sought locally.

It was not, however, until a very much later date that the triapsidal basilical plan was established in Coptic Egypt, and then invariably inscribed within a plain rectangular exterior. The Athanasian church stood barely thirty years before it was superseded by the Theophilan building with its single projecting apse, and it appears to have left no mark on contemporary or later Egyptian practice.

Buttressed Apse. The single projecting apse of the Period IV church, while unique in the early Christian architecture of Egypt, is in itself a feature familiar enough elsewhere to call for little comment. It is, however, in this case further distinguished by the addition of radiating external buttresses. These buttresses are characteristic of the fifth-century architecture of the Eastern Adriatic coast.⁹² Elsewhere they are unusual at this early date. An example in Asia Minor is the church of St. Thekla, c. 470, at Meriamlik, Cilicia.⁹³

Spherical Triangular Pendentives. The origin of the pendentive, as a means of adapting a dome to a square space, is a subject on which scholars have lavished much attention, but have often contrived to generate more heat than light. This result must be attributed in no small degree to the misleading antithesis inherent in the question 'Rome or the Orient?', which has dominated so much enquiry in this field in the last few decades, and has given rise to a great deal of incautious generalisation. Much of this might have been avoided by a more scrupulous regard for the architectural grammar of the subject, and by

⁹¹ Since this article was prepared the writer learns that recent work in S. Pietro in Vincoli, Rome, has shown that the two small flanking apses are contemporary with the transept and are the work of Sixtus III (432-40). *Riv. Arch. Crist.* XXI, 1944-5, p. 324.

⁹² Nikopolis, in Epirus, Basilicas A (fifth century) and B (second half of fifth century), Soteriou, *Arch. Eph.*, 1929, figs. 33 and 37; Paramythia, in Epirus, *ibid.* fig. 36; Philippi, second Basilica, *Bull. Corr. Hell.* LXI, 1937, 463 ff.; *Atti IV Congr. Arch. Crist.*, p. 369, fig. 15; Marusinac, main church (mid first-half fifth century), E. Dyggve and R.

Egger, *Forschungen in Salona*, Vol. III, Vienna, 1939; *Atti IV Congr. Arch. Crist.*, p. 402, fig. 15. The apse of the Basilica at Sabratha in Tripolitania is wrongly shown as of this form by Bartoccini, *Guida di Sabratha*, 1927, reproduced by Romanelli, *Atti IV Congr. Arch. Crist.*, p. 247, fig. 1.

⁹³ E. Herzfeld and S. Guyer, *Meriamlik und Korykos* (*Monumenta Asiae Minoris Antiqua*, Vol. II, Manchester, 1930), p. 14, figs. 8 and 14. The authors quote a second example at Miletus.

a recognition of the fact that, save in a few thoroughly explored areas of the field (such as Italy), the available material is not yet sufficient to warrant a comprehensive judgement. The immediate need is for a larger body of agreed and carefully studied evidence.⁹⁴

At Abu Mîna, the sub-structures of the Period IV church, c. 400, contain one certain instance of a square chamber with a brick dome springing from fully developed, spherical-triangular pendentives (Pl. VI, 3). This somewhat cumbersome phrase is necessary if we are to distinguish between those more elementary pendentives, which follow the curve of the simple spherical or domical vault without interruption and so constitute a uniform downward prolongation of the curved surface into the angles of the square space beneath, and those which, while themselves segments of a spherical surface, follow a curve at a sharp angle to that of the dome above, and thus retain their identity as separate triangular elements distinct from the actual dome.⁹⁵ The simpler form belongs to the continuous vault (*volta a vela*, *Hängekuppel*), which is, relative to the true dome, an elementary form of construction that had a wide currency in the classical Roman world as a means of vaulting square rooms of modest dimensions. The spherical-triangular pendentive, on the other hand, belongs to a group of devices of a more ambitious character, whereby a true dome, of greater height and span than the spherical vault, could be accommodated to a square plan. Failure to observe the distinction between the two forms often results in obscuring the elementary fact that the former was in general use throughout the Mediterranean world long before the earliest authenticated appearance of the developed spherical-triangular pendentive; and a good deal of the evidence often adduced for the origins of the latter is in consequence of very little direct relevance to the question at issue.

It may well be that the vault over the actual tomb-chamber was of the simpler, continuous spherical form, which would have been better adapted to cover the relatively larger area without projecting through the pavement above. At Karânis, in the Faiyûm, vaults of this form were found in the second of three distinct building levels, of which the third, and latest, had been finally abandoned about 450.⁹⁶ The shallow pitch of some of these reveals a level of technical competence that is the more notable in that Karânis was a modest provincial town with few architectural pretensions. The vaults in the cemetery of el-Bagawât (see above, p. 40) are of the same general construction, though rather more lofty. There can, in fact, be no doubt that the technical background of the brick vaulting of the Period IV crypt and baptistry at Abu Mîna is to be sought in the indigenous craftsmanship of Roman Egypt. What is new to this tradition, at least in so far as its remains have so far been recorded, is the appearance, in the small chapel of the crypt, of two elements, the developed spherical-triangular pendentive and the squinch (see following section), both of which belong properly to a more ambitious architecture. In the context they can most naturally be explained as elements already current in the architecture of Alexandria; and their use in a building that can be so securely dated to the opening years of the fifth century is a fact of no little significance.

⁹⁴ See J. B. Ward Perkins, *The Italian Element in Late Roman and Early Medieval Architecture* (British Academy Annual Italian Lecture, 1947), London, 1949, pp. 17-8.

⁹⁵ In rejecting this useful and generally accepted distinction, Creswell (*Early Muslim Architecture*, II, 1940, p. 322) adds a quite unnecessary element of confusion to the controversy.

⁹⁶ A. E. R. Boak and E. E. Peterson, *Karânis 1924-28* (University of Michigan Studies, Humanistic Series, No. XXV, 1929), pl. XIV, fig. 28; cf. pp. 23-4, pls. XIII, XVIII. For the chronology see also D. B. Harden, *Roman Glass from Karânis* (Same series, No. XLI, 1936), pp. 24-34. The terminal date is not in dispute.

Squinches. The squinch (*Pennacchio a tromba* or a *mezzo padiglione*, *Ecktrömpe*) can take a number of forms, but all consist in essence of some form of small structural arch springing from the upper part of two adjacent walls and spanning the angle between them, to bridge the transition from a square or polygonal space to a dome. The angle within this small corner-arch is often itself half-domed. In its simplest form, it is structurally less satisfactory than the spherical pendentive, for it softens, but does not wholly resolve, the awkward junction between circle and square or polygon. But it was capable of considerable and ingenious development; and it had a long and varied currency in the later architecture of both East and West.

If the Palace of Firūzābād were rightly dated to the third century, the case for a Sassanian origin would be strong.⁹⁷ What is in any case beyond dispute is that it was already in use, both in Italy and in the Eastern Mediterranean, in the fifth century. The four well-developed squinches in the baptistry of S. Giovanni a Fonte at Naples, the work of Bishop Soter (465–86), have hitherto enjoyed pride of place as the earliest certainly attested examples in the Roman world.⁹⁸ Those which support the half-dome in the chapel of the crypt at Abu Mīna are half a century earlier. In themselves they are modest, but they are enough to show that, like the pendentive, the squinch was already familiar in Alexandria at the beginning of the fifth century.

Narthex with Apsidal Exedrae. A distinctive feature of the Period IV complex is the narthex with its lateral apsidal exedrae. At first sight these exedrae call to mind the columnar exedrae which were to play so important a part in the developed sixth-century architecture of North Italy and of Constantinople. Their employment, however, is entirely different. Whereas in the series which leads up to Haghia Sōphía and to San Vitale, the exedrae perform an essential architectural function, here they have no structural significance whatever. It is tempting to regard them as a derivation from an established functional type; but it must be admitted that in the disputed question of the origins of the latter their evidential value is slight.

In more general terms the narthex, with its two opposed apsidal exedrae, should perhaps be related to a group of Italian monuments, at the head of which in the Christian series stands the Mausoleum of Santa Costanza at Rome.⁹⁹ Other surviving examples are the baptistry built by Sixtus III, 423–40, in replacement of the Constantinian baptistry of St. John Lateran;¹⁰⁰ S. Ippolito, Milan, third quarter of the fifth century;¹⁰¹ San Vitale

⁹⁷ The squinches of Firūzābād are well developed and betray a competent tradition (accessibly illustrated by G. T. Rivoira, *Le Origini della Architettura Lombarda*, Rome, 1901, fig. 124, and *Lombardic Architecture*, 2nd edition, Oxford, 1933, vol. I, fig. 290). Their date, however, is far from certain. The palace is often assigned to the third century A.D. (e.g. by O. M. Dalton, *East Christian Art*, Oxford, 1925, p. 78, n. 1, and p. 82, n. 1; and by K. A. Creswell, *Early Muslim Architecture*, II, 1940, pp. 101–5); but the evidence is far from conclusive. It may well be two centuries later. The palace of Sarvistān is certainly not earlier than the fifth century. For bibliography on the squinch, see Creswell, *op. cit.*, p. 101, n. 1.

⁹⁸ E. Bertaux, *L'art dans l'Italie méridionale*, Paris, 1901, p. 40; G. T. Rivoira, *Roman Architecture*, Oxford, 1925, fig. 311. It may not be without significance in this context that the rectangular form of this baptistry, familiar in the Eastern Mediterranean and North Africa, is unique in the Early Christian series of Italy (E. Sjöqvist, 'Studi intorno

alla piazza del Collegio Romano', *Acta Instituti Romani Regni Sueciae*, XII, 1946, 138). Earlier than this baptistry or the chapel at Abu Mīna is the small Caldarium, added c. A.D. 300 to the Hunting Baths at Lepcis Magna (*Archaeologia* XCII, 1949); and to the fourth century belong the well-developed squinches in the towers of the Aurelian Walls, noted by Dr. L. Cozza (Lecture at the Museo di Roma, 8 April, 1948).

⁹⁹ Recently well surveyed by Stettler, *Roemische Mitteilungen* LVIII, 1943, pp. 76–86; for the most recent bibliography see Sjöqvist, *op. cit.* p. 144, n. 3.

¹⁰⁰ G. B. Giovenale, *Il Battistero Lateranense* (Studi di Antichità pubblicati per cura del Pontificio Istituto di Archeologia Cristiana, No. I, 1929).

¹⁰¹ P. Verzone, *L'architettura religiosa dell'alto medioevo nell'Italia settentrionale*, Milan, 1942, pp. 79–90. G. Chierici, in *Palladio* II, 1938, 3, illustrates a similar feature in the narthex of S. Lorenzo in Milan, but this would appear to be a paper-restoration unwarranted by the known facts.

at Ravenna, begun between 520 and 530 and consecrated in 547; and the church of S. Giovanni Battista at Canosa.¹⁰² A porch with two opposed exedrae was added in the fifth century to the so-called Temple of Minerva Medica in Rome;¹⁰³ and the same feature can be seen in the plans, made by an anonymous Florentine artist before 1514, of the two imperial mausolea, later the churches of S. Andrea and of S. Petronilla, which were destroyed alongside old St. Peter's in the early sixteenth century.¹⁰⁴

Outside Italy the only examples known to the writer are to be found in Asia Minor¹⁰⁵ and in the churches of Coptic Egypt, which presumably, in this respect at any rate, stem directly from Abu Mîna. The derivation is particularly clear in Deyr el-Abiad, Sohag, c. 440,¹⁰⁶ which repeats the otherwise unique, columnar form of the Abu Mîna exedrae. At Dendera¹⁰⁷ the exedrae are, more conventionally, apsidal recesses, so inscribed within the thickness of the wall as not to break the characteristically plain, rectangular outer perimeter. At Deyr Abu Hennis and at Medamûd there is one such exedra only; and the church of Abu Sargeh in Old Cairo may represent a tardy survival of the same tradition.¹⁰⁸

The semi-circular screen over the tomb. Whether or not the nave of the Athanasian church was an open courtyard in Period IV, the semi-circular screen over the tomb seems to have been a free-standing feature; and there can be little doubt that, like the exhedrae of the narthex, it carried a light half-dome of brick. The significance of the free-standing apse as an early form of martyrion has recently been fully discussed by A. Grabar (*Martyrium*, Paris, 1946).

Octagonal Baptistry. So many conflicting claims have been made about the origins of the architectural form represented by the Period IV baptistry at Abu Mîna, that it is useful to call attention to the fact that, already by the close of the fourth century, it was firmly established in the civil architecture both of the eastern and of the western Mediterranean. In Italy we find it as early as the close of the first century in the Flavian Domus Augustana on the Palatine,¹⁰⁹ and with very slight modification it persisted, notably as an element of bath architecture, until it was adopted by the Christian Church of North Italy as a standard baptistry plan.¹¹⁰ In the Near East we find it already established in the

¹¹⁰ The Italian development has been well studied by G. De Angelis d'Ossat, whose work, with earlier bibliography, is summarised in two articles: 'Sugli edifici ottagonali a cupola nell'antichità e nel medio evo', *Atti del I Convegno Nazionale di storia dell'architettura*, Rome, 1938, pp. 14-24; and *Romanità delle Cupole Paleocristiane*, Rome (Istituto di Studi Romani), 1946, p. 13, fig. 3. See also P. Verzone, *L'Architettura religiosa dell'alto medioevo nell'Italia Settentrionale*, Milan, 1942.

second century, in a bath-building (Bath C) at Antioch;¹¹¹ and it had no inconsiderable influence on the Near Eastern Christian architecture of the fourth and later centuries.¹¹² The baptistry at Kal'ât Sim'an,¹¹³ c. 460–90, with its flanking halls and entrance corridor, affords an unusually close and interesting parallel to that of Abu Mîna.

The Ninth-century Church. The church built by the Patriarch Joseph differs markedly from the roughly contemporary architecture of the Wadi'n-Natrûn. The sack of the latter site, c. 817, had swept away almost entirely the earlier buildings, and the surviving remains of the ninth-century reconstruction reveal a standardisation of practice approximating closely to later Coptic usage.¹¹⁴ Indeed, the only important difference is that the nave is not yet vaulted, but retains the traditional timber roof. There is already a rigid division between nave and chancel and, within the chancel, between the three *baikals* or chapels. In the ninth century the central *baikal* was normally square and covered with a dome set on sleeper beams laid across the angles; and it was flanked by two tall, narrow, barrel-vaulted lateral *baikals*.

Such an arrangement presupposes internal walls sufficiently solid to carry the dome over the central *baikal*, and of these there is no trace at Abu Mîna. The retention of the two Period IV niches flanking the central apse indicates that the chancel was probably in some way subdivided; but the division can hardly have been more substantial than wooden partitions, and the whole chancel was probably roofed as a unit. The apses are another unusual feature. The ordinary Coptic *baikal* is square-ended. In other words, the ninth-century church at Abu Mîna reveals considerably less progress than its contemporary neighbours in the Wadi'n-Natrûn towards the idiosyncrasies of later Coptic church architecture; and there can be little doubt that, in this, it reflects its closer contact with Alexandria.

E. NOTES ON THE SCULPTURAL ORNAMENT AND ON THE RELATION OF ABU MÎNA TO ALEXANDRIA AND TO COPTIC EGYPT

The foregoing notes cover some only of the more striking of the architectural features revealed at Abu Mîna. They are in no sense exhaustive; and little or no mention is made of other features, which are equally important for the appraisal of the shrine's significance in relation to contemporary architectural currents, on which, however, any judgment would at present be premature. The developed plan of the Period IV Theophilan complex, for example, for all that (like the cathedral complex at Gerasa¹¹⁵) it owes something in detail to the architectural accidents of the shrine's growth, remains an important document for the study of the development of the principles of lay-out established by the

¹¹¹ *Antioch-on-the-Orontes, I, excavations of 1932*, Princeton, 1934: C. S. Fisher, 'Bath C', pp. 19–31, plan pl. V. C. R. Morey, *The Mosaics of Antioch*, London and New York, 1938, plan p. 12. The bath was built after the earthquake of 115, and rebuilt, on the same lines, in the fourth century.

¹¹² The church which Gregory of Nyssa, c. 335–95, built at Nyssa, was certainly of this general form, somewhat elaborated (Gregory of Nyssa, *Letter to Amphilocheus* (Migne, *Patrologia Graeca*, XLVI, 1093–1100); see reconstruction in J. Strzygowski, *Kleinasion ein Neuland des*

Kunstgeschichte, Leipzig, 1903, pp. 74–90; for later bibliography see S. Guyer, *Byzantinische Zeitschrift* XXXIII, 89–90). Surviving examples from the early sixth century are the well-known churches at Esra and Bosra, and the church of St. John the Baptist at Gerasa.

great commemorative foundations of Constantine, such as the church of the Holy Sepulchre in Jerusalem; and it may be relevant also to the history of the development of the canonical atrium-narthex-basilica complex. But detailed discussion of either point can be of little value until it is clearly established by excavation whether in Period IV the nave of the Athanasian church was, in fact, replaced by an atrium, or whether instead some part of the earlier structure was retained in use. Excavation is equally required for a fuller knowledge of the primitive shrine and of the Athanasian church, and to establish in detail the character of the internal fittings not only of the latter but also of its Theophilan successor.

There are, moreover, several aspects of the site, which are open to immediate enquiry without further excavation, on which, however, the writer had neither the time nor the facilities adequately to supplement the exiguous and misleading accounts published by Kaufmann. No discussion of the architecture of the Sanctuary can, for example, be complete without a comparative examination of the other important excavated buildings, notably of the cemetery church¹¹⁶ and of the bath-building with its two-apsed basilical hall.¹¹⁷

Another aspect of the remains, which must await more favourable conditions for a detailed study, is the architectural ornament. The best of this was removed by Kaufmann to Frankfurt-am-Main, where circumstances have not permitted its inspection; nor was the writer in a position to secure the necessary documentation of the fragments surviving on the site itself. It may, nevertheless, be useful to point out in this concluding section certain general features, which have an important bearing on the relation between the art of Christian Alexandria and that of Coptic Egypt.

A masterly statement, not only of the wider problems presented by Coptic sculpture but also of the chronology and content of the sculpture itself, is to be found in an article published ten years ago by Ernst Kitzinger.¹¹⁸ He starts from a re-examination of the important sculpture from Ahnâs, the classical Heracleopolis.¹¹⁹ This forms a continuous series, ranging from the earlier, 'soft' group, in which the classical element is still relatively strong, to the more rigid stylisation of the later 'hard' group. On the evidence of the associated capitals, the central dates for these two groups can be shown to be c. 400 and the middle of the fifth century, respectively. This Ahnâs sculpture is only in part Coptic, in the strict sense of the term, for much of it, probably the majority, is pagan work.¹²⁰ But it is the immediate iconographic and stylistic forerunner of the developed Coptic sculpture of Bawît¹²¹ and of Saqqara,¹²² which can be securely dated, again on the evidence of the associated capitals, to the mid-sixth century.

The source, from which much of the Ahnâs sculpture was itself developed, has been put beyond question by the excavation of a group of comparable, but earlier, sculpture at

Oxyrhyncus.¹²³ An important exception must be made of the figured mythological compositions which are the most striking and individual features of the Ahnâs sculpture. Whether or not Kitzinger is right in regarding these as a local Egyptian development,¹²⁴ it is clear that they had only a brief currency. They are found in rudimentary form at Oxyrhyncus; and they were dropped from the sixth-century Coptic repertory. The other characteristic features, however, of early Coptic sculpture, capitals, niches, and gables, almost without exception display a continuous and coherent development from the sculpture of Oxyrhyncus, through that of Ahnâs, to that of Saqqara and of Bawît. The Oxyrhyncus sculpture is not itself dated; but, as a group and allowing for individual exceptions, it can hardly be earlier than the beginning of the fourth century; and the Ahnâs group provides a *terminus ante quem* at the end of the same century.¹²⁵

While the term Coptic can be properly applied only to the later Christian members of the series, the continuity within the series is such that it is to the wholly or predominantly pagan sculpture of Oxyrhyncus and of Ahnâs that we are bound to look for comparison with the surviving fourth- and fifth-century sculpture of Abu Mîna. The overwhelming conclusion from such a comparison is that neither in style nor in content is there the least similarity. The two series belong to different cultural and stylistic worlds.

The largest surviving body of comparative material is afforded by the capitals. A number of these are illustrated by Kaufmann;¹²⁶ and Kautzsch, in his valuable analysis of the late-classical capital, describes and in part illustrates some of the Corinthian capitals from Abu Mîna in the collection at Frankfurt.¹²⁷ Of the latter it is here sufficient to remark that they belong without exception to the general tradition of late-Roman craftsmanship in the eastern Mediterranean and are ascribed by Kautzsch to the fourth and fifth centuries. Of the characteristically Egyptian late-Roman and early Coptic Corinthian capital there is no trace. With its upper row of acanthus leaves so widely spaced as to expose the *caulicoli* and sheath-leaves, the junctions of which are further emphasised by conspicuous round knobs, the latter is a striking and easily recognisable form.¹²⁸ It is, moreover, peculiar to Egypt, so that its absence is all the more noteworthy. A further point of marked divergence lies in the treatment of the detail. At Abu Mîna there is no trace of that simplification and of that hardening into a sharp black-and-white pattern, which can be felt as early as the fourth century at Oxyrhyncus and was increasingly to become the salient characteristic of the succeeding Coptic sculpture. The relaxation of classical forms is here a process of dissolution, unaccompanied by any positive stylistic development.

The points of contact between the two series lie, significantly enough, in those capitals which are demonstrably intrusive to the local Egyptian series. Such, for example, is a fine Corinthian capital of Proconnesus marble, now in the Coptic Museum at Cairo, with

¹²³ Ev. Breccia, *Municipalité d'Alexandrie: le Musée gréco-romain 1925-31*, p. 60 ff; and 1931-2, p. 36 ff. For scattered sculpture from Oxyrhyncus see Kitzinger, *op. cit.* p. 200, n. 1.

82, 83, 100, 108, 109, 112, 122, 128, 129, 133, 138, 152, 153; pls. 6-9. These examples embrace his types 2, 3, 5-7, 9-13, 16.

¹²⁸ Kitzinger, pp. 187-8, pl. lxviii, 1, 2, 4; recently and more fully illustrated by E. Drioton, *Les sculptures coptes du Nilomètre de Rodah*, Cairo, 1942. Drioton accepts Kitzinger's main conclusion and chronology. See also J. Strzygowski, *Koptische Kunst (Catalogue général des antiquités égyptiennes du Musée du Caire, vol. XII)*, Vienna, 1904, no. 7348, fig. 101.

an eagle in the centre of the abacus.¹²⁹ It is one of six formerly at Ahnâs, and it is unquestionably a stranger to the local series. At Abu Mîna, on the other hand, similar capitals fall naturally into place within the main series of capitals, many of which are themselves of island marble, while all reflect the same general stylistic background.¹³⁰

The only other form of capital which Kautzsch records from Abu Mîna is that here illustrated in Pl. IX. 3, from the site of the Coptic Patriarchate in Alexandria,¹³¹ a familiar eastern Mediterranean type with a pedigree that goes back to the Tower of the Winds at Athens, the Traianeum at Pergamon, and the Severan Forum at Lepcis Magna, to cite three familiar examples only. Of this late fluted form there are a number of examples in Cyrenaica and in the museum at Alexandria. It is not a common Coptic type, although a painted version is represented at Saqqara.¹³²

Two other groups of capitals, found at Abu Mîna in considerable numbers but omitted by Kautzsch, deserve brief mention. The first of these comprises, in varying degrees of debasement, Ionic and composite Ionic capitals, in the latter of which the Corinthian element is always exiguous and may be reduced to four leaflets at the angles beneath the volutes.¹³³ Most are of modest dimensions. There is no example of the related Ionic impost-capital, a Greek type of which two examples, from Alexandria itself, are preserved in the Alexandria museum.¹³⁴ The second group comprises a wide variety of small capitals from screens, windows, and ornamental niches, ranging from small but fully articulated Corinthian to diminutive drums with four shallow leaves scored at the angles. A number of these incorporate the wreathed-cross motif (see below pp. 66-8), and in at least one instance this has displaced all other ornament.¹³⁵

With the exception of the capitals, which are at least sufficiently numerous to be considered as representative, all too little of the architectural ornament of Abu Mîna has survived. The fragments of gold mosaic associated with the Period IV buildings of Archbishop Theophilus are a tantalising reminder of what has gone. The surviving column-bases, some of them securely dated to Period IV, are mainly of the form illustrated in Pl. VII, 1 with the Attic base and the moulded rectangular pedestal carved in a single block. This form originated in the eastern Mediterranean, where it is common from the second century onwards. It was later only, and then sporadically, that it found its way into the west.¹³⁶ At Lepcis Magna it is used, with base and plinth carved separately, in the great Severan Forum; and, carved in a single block, in a fourth-century portico beside the Theatre. In Rome it is hardly found before the fourth century. In the museum at Alexandria there are a number of scattered examples; and in Coptic Egypt it is not uncommon, though usually in a somewhat evolved form.¹³⁷ Pedestals of the same general

¹³⁶ See J. B. Ward Perkins, *J.R.S.* XXXVIII, 1948, p. 70.

¹³⁷ At Bawit, for example, the column-bases are raised as a regular practice. Quibell, *op. cit.* pl. XVIII, illustrates a pilaster with a pedestal reminiscent of the Abu Mîna form. The majority of the under-bases are, however, of plain rectangular shape (e.g. pl. LXVI), in one case elaborated into a crouching animal (pl. XXIV).

form, but octagonal in section (Pl. VII, 2) are less generally common than the rectangular type. An example, similar to those in the Period IV church at Abu Mîna, is recorded from Saqqara.¹³⁸

There remain five fragments only which betray a certain relationship to contemporary Coptic work. Three of these belong to a set of pilaster-capitals found in the baptistry (Pl. IX, 4).¹³⁹ All three echo Corinthian forms in which, as at Ahnâs and Saqqara, the volutes have been absorbed and united with the sheath-leaves. More important perhaps, they illustrate in a loose but unmistakable form the *Wedelranken*, or acanthus shoots with leaves springing from both sides of the stem, which play so large a part in early Coptic ornament. Kitzinger has convincingly demonstrated that this is a local Egyptian convention, the early stages of which can be studied at Oxyrhyncus.¹⁴⁰ The substance of these capitals is, then, common to the Coptic tradition; and a further element common to the local Egyptian School, though it was rejected by the sculptors of Ahnâs, is the long naked *caulicoli* of the fourth fragment, also a pilaster-capital, which was found in the buildings lying to the north of the Theophilan church and identified by Kaufmann as the monastic quarters (Pl. X, 1). The same naked *caulicoli* can be seen on a fourth-century capital from Oxyrhyncus.¹⁴¹ Even at this early stage, however, the comparison reveals the essential difference between the soft fluidity of treatment at Abu Mîna and the hard angularity of the Coptic and pre-Coptic series. These four pilaster-capitals at Abu Mîna reveal a certain community of tradition, but none of treatment. At most they indicate a reciprocal influence from contemporary sculpture. The fifth fragment (Pl. IX, 2)¹⁴² is all that remains of a chancel-slab. The little detached spray of three leaves in the surviving triangular compartment would not be out of place in the Coptic series.

From this brief survey it is possible to draw two conclusions at any rate of some general significance. The first of these is the essentially conservative character of all the surviving fourth- and fifth-century material at Abu Mîna. A more detailed study reveals local characteristics and details of treatment to distinguish it from the contemporary work of other eastern Mediterranean centres. But by contrast with the mannerisms of the contemporary Egyptian pre-Coptic and Coptic style represented at Oxyrhyncus and at Ahnâs, it represents a decided, if decadent, classicism. The second point of interest is that, apart from repairs and replacements, there is nothing here that is obviously later than the fifth century. In particular, there is no trace here, and very little in Alexandria itself, of the Justinian imperial art, which is so striking a feature in the reconquered Vandal provinces of North Africa and in Italy. This absence is a revealing commentary on the scope and purposes of the policy of deliberate cultural re-absorption, which we see reflected not only in the pages of Procopius, but in the remains of so many sixth-century buildings, great and small, in the central and western Mediterranean.

We can supplement this picture by a glance at the Christian remains of Alexandria

¹³⁸ Quibell, *op. cit.* vol. III, pl. V. For its use elsewhere see L. Crema, 'I monumenti architettonici afrodisiensi', *Monumenti Antichi*, XXXVIII, 1939, col. 223, figs. 57, 58, and 60 (Aphrodisias, in Caria, a later modification to the Tiberian porico of the agora); A. von Gerkan, *Das Stadion (Milet)*, ed. ¹⁴² After Kaufmann, *Menasstadt*, pl. 68. 6.

itself, as represented by the collections of the city's Greco-Roman Museum. These notably confirm the impression of a somewhat conservative classicism. The majority of the capitals are of Corinthian or composite types, identical in form, material, and craftsmanship with those of Abu Mîna. There are, however, in addition a certain number of more exotic forms, which indicate wider horizons. There are, for example, two Ionic impost-capitals from rue Sidi Abu Dardâ.¹⁴³ They are carved in local stone, and the wreathed cross on the impost stamps them as of local workmanship (see p. 67). But while the form falls readily into place within a long series represented in the Greek mainland, it is found nowhere else in the Egyptian series. These two capitals are unquestionably intruders. The same is true of a remarkable fifth-century Corinthian capital with foliated masks at the angles in place of the volutes.¹⁴⁴ It belongs to a widely distributed and varied group of capitals with a long classical ancestry, of which other examples are recorded from Egypt. In this instance, however, the hard, drilled treatment of the acanthus leaves and of the foliage of the hair and beard leaves no doubt as to its direct metropolitan affinities.

To the same general orbit as the capitals and other sculptural remains of Abu Mîna belong a group of antiquities found during quarrying operations to the west of Alexandria near the village of el-Dekhêla, and now in the Greco-Roman Museum. This is believed to be the site of one of the group of monasteries of Ennaton, a community which took its name from its proximity to the ninth milestone out of the city. The remains consist of a homogeneous group of fourteen epitaphs from a monastic cemetery, twelve of them dated between 524 and 590;¹⁴⁵ and a group of sculpture which presumably represents the scanty remains of the fittings of the convent church. The latter comprises the column of a canopy or of a chancel-screen, fluted spirally above and vertically below; the lower part of a similar column, slotted to take a transenna; seven Corinthian or fluted capitals of various sizes; an open-work transenna (Pl. IX, 1 and 5); two small chancel-posts (Pl. VIII, 3); and a bas-relief of St. Menas between two kneeling camels (Pl. VIII, 1).¹⁴⁶ The last-named is almost certainly a copy of the cult-figure at Abu Mîna (see p. 46); and the capitals are in the same simple tradition as the majority of the smaller capitals at Abu Mîna. The transenna, and in particular the foliate ornament in the angles of the central panel, offer an interesting parallel to the pilaster-capital from the monastic quarters illustrated in Pl. X, 1. The evidence of the inscriptions, which may well be a chance group from a larger series, tells us no more than that the community was already established in 524. The sculpture may well be earlier; and whatever its date, the tradition is clearly that illustrated in the early years of the fifth century at Abu Mîna.

The sixth century is represented by a single imported group of three impost-capitals of varying sizes in the Greco-Roman Museum; a fourth, also from Alexandria, in the Cairo Museum; and a fifth in the en-Nasir mosque at Cairo.¹⁴⁷ All are of the type, best known perhaps from its use in San Vitale at Ravenna, with an overall pattern of basket-work

about a central rectangular panel of stylised lotus-ornament.¹⁴⁸ It is familiar from a number of widely scattered sites. Kautzsch lists Ravenna, Parenzo, Constantinople, Antigoni, Brussa, Nicaea, Pergamon, and Trebizond. To this list may be added at least three other North African sites: Kairouan, in the mosque of Sidi Okba, from Carthage; Tripoli, a damaged specimen now in the Castle grounds; and Barce in Cyrenaica. Not only is this form of capital clearly dated to the time of Justinian; but it is quite evident that in most cases at any rate it was either exported ready-made from a common centre, which is usually assumed to have been the imperial quarries of Proconnesus, or it was completed locally by workmen trained in a common central tradition. The fact that in Egypt these imported examples have been found only in Alexandria acquires an added significance when we recall that it was from this, and from related metropolitan Justinian forms of capital, that several of the most distinctive members of the later Coptic repertory were derived.¹⁴⁹ It looks very much as if, despite a divergence of style and of detailed treatment that was sufficiently marked to maintain its individuality unimpaired, it was nevertheless to Alexandria that Coptic Egypt looked for contact with the outer world.

The same relationship emerges from the study of what was one of the commoner, and certainly one of the more distinctive, of the sculptural motifs employed at Abu Mîna and in the region of Alexandria. This is the equal-armed cross within a wreath bound with short curly ribbons (see Pls. IX and X). Whether or not it is found elsewhere in precisely this form, it is hard to say. Certainly its appearance on capitals that are normally regarded as imports from abroad (e.g. the well-known capital from Ahnâs in the Cairo Museum, listed below) suggests that it *ought* to be found elsewhere; indeed, if not, it will be necessary to reconsider the accepted views as to the source of these capitals, and to examine in greater detail the possibility that they were made, or completed, locally. In any case, it is certainly found in the area of Alexandria in such large numbers relative to the amount of surviving material, that it may rightly be regarded as a peculiarly Alexandrian motif. The following list is doubtless incomplete, but it gives at any rate a fair view of the relative incidence.

Abu Mîna: present location? Marble capital, akin to that from Ahnâs (see below), with a wreathed cross on the abacus. Kaufmann, *Menastadt*, pl. 68. 5; cf. (but without the wreathed cross), pl. 68. 7, now in Frankfurt (presumably = Kautzsch, no. 79, pl. 6). Kaufmann, pl. 72. 3, illustrates either another similar capital or another face of the same capital.

: present location? Marble capital, similar to the above but less deeply cut; wreathed cross on abacus. Kaufmann, *Menastadt*, pl. 70. 2.

: in the Greco-Roman Museum, Alexandria, inv. no. 17008. Incomplete Corinthian capital with wreathed cross on the abacus (Pl. X, 4).

: present location? Colonnnette-capital with acanthus leaves at angles and wreathed cross in the centre of one face. Kaufmann, *Menastadt*, pl. 69. 1.

: present location? Colonnnette-capital, plain save for a wreathed cross with up-swept ribbons in the centre of each face. Kaufmann, *Menastadt*, pl. 69. 2.

: present location? Colonnnette-capital, with rudimentary acanthus-leaves at the angles and wreathed cross in the centre of one face. The cross has a hooked P terminal to the upper arm. Kaufmann, *Menastadt*, pl. 69. 3.

¹⁴⁹ Kautzsch, pp. 232-4; Kitinger, p. 190. Strzygowski's tacit assumption that in Egypt these forms could precede the Byzantine prototypes will not bear examination; see O. Wulff, *Byzantinische Zeitschrift* XIII, 1904, p. 564 ff.

- : in the Greco-Roman Museum, Alexandria, inv. no. 17444. Marble pilaster capital with central wreathed cross (Pl. X, 1). Kaufmann, *Menastadt*, fig. 36.
- : *in situ*. Impost-block of limestone, plain save for wreathed cross on each of the four faces (Pl. X, 3). Kaufmann, *Menastadt*, fig. 31.
- : *in situ*, now in crypt. Fragments of a heavy marble impost-block (?) with wreathed cross on one face.
- Ahnâs. In the Cairo Museum, inv. no. 7350. Imported Corinthian capital of Greek marble, one of a set of at least six, five of which were still to be seen in the church at Ahnâs in 1902. On the four sides of the abacus are an eagle, a wreathed cross, a formal spray, and a twined boss. J. Strzygowski, *Koptische Kunst (Catal. général des antiquités égyptiennes du Musée du Caire, vol. xii)*, Vienna, 1904, pp. 75-6, fig. 102-3. Kautzsch, no. 81, pl. 6.
- Alexandria: rue Sidi Abu Dardâ. In the Greco-Roman Museum, Alexandria, inv. no. 11901. A white marble lintel or ornamental cornice-moulding with a wreathed cross against a shallow projecting bracket (Pl. X, 5).
- : rue Sidi Abu Dardâ. In the Greco-Roman Museum, Alexandria, inv. no. 11791. A pair of Ionic impost-capitals in local stone, with a wreathed cross on the impost-block. Kautzsch, no. 536, pl. 33. See p. 65.
- : provenance uncertain. In the Greco-Roman Museum, Alexandria. Bracket of white local marble, the projecting architrave-element of an engaged order, with a wreathed cross on one face.
- : Agnew catacomb. Incised slab with inscription of the fifth or sixth century. H. C. Agnew, *Archæologia*, XXVIII, 1840, p. 152 ff., pl. XIV. Cabrol, *Dictionnaire*, s.v. *Alexandrie* fig. 292.
- : Hagar-Nawatieh, near the canal at Ramleh. Greco-Roman Museum, Alexandria, inv. no. 14158. Marble stele (m. 1.64 × 0.70 × 0.67) with metrical inscription recording the clearance of the canal by Alexander, probably the *praefectus augustalis* of 467. Above the inscription is a wreathed cross (Pl. X, 2). G. Lefebvre, *Recueil des inscriptions grecques-chrétiennes d'Égypte*, Cairo, 1907.
- Aschmunein. In the Cairo Museum, inv. no. 7351. As no. 7350 from Ahnâs. Strzygowski, *op. cit.*
- Cairo: Mosque el Mu'aijad. Capital similar to that from Ahnâs (see above). Kautzsch, no. 43, not illustrated, but described pp. 25-6.
- : Mosque Sâlih Talâ'i. Capital similar to that from Ahnâs (see above). Kautzsch, no. 96, pl. 6.
- : provenance uncertain. In the Coptic Museum. Engaged half-column divided into two zones: below, overall pattern of lozenges and rosettes; above, spiral fluting with superimposed wreathed cross.
- : provenance uncertain. In the Coptic Museum. Small marble Corinthian capital with wreathed cross.
- : from Fostat. In the Coptic Museum, inv. no. 4181. Small altar-shaped base with a wreathed cross on one face. The ribbons are unusually long and terminate in ivy-leaves. Marcus H. Simaika Pacha, *Guide Sommaire du Musée Copte*, Cairo, 1937, pl. xlii.
- : found re-used in the sub-structures of the Nilometer at Rodah, and believed to come originally from Heliopolis. A broad, shallow pilaster-capital with a wreathed cross in the centre of the face. E. Drioton, *Les sculptures coptes du Nilomètre de Rodah*, Cairo, 1942, pp. 88-91, no. 19.
- : in the church of el-Moallâqa, Old Cairo. Marble ambon-panel, re-used in the later medieval ambon, with a wreathed cross beneath a shell-headed canopy.
- El-Dekhêla: from the presumed site of the monastery at Ennaton. In the Greco-Roman Museum, Alexandria. Small pilaster-capital with wreathed cross on one face. The ribbons in this case are omitted; but in all other respects cf. Saqqara, below. *B.S.R.A. Alex.*, No. 9, 1907, pp. 3-12, fig. 4.
- Faiyûm. In the Cairo Museum, no. 8506. Inscribed Greek stele with wreathed cross. W. E. Crum, *Coptic Monuments (Catal. général des antiquités égyptiennes du Musée de Caire, vol. IV)*, Cairo, 1902, pl. XIX.
- Rosetta. In the Greco-Roman Museum, Alexandria, inv. no. 22234. Re-used Ptolemaic lintel of black marble, re-carved with three wreathed crosses (Pl. IX, 6).
- Saqqara: from the monastery of Apa Jeremias. Pilaster-capital, almost identical with that from el-Dekhêla. J. E. Quibell, *Excavations at Saqqara IV*, 1912, pl. XXXV. I.

It will be seen that outside the immediate neighbourhood of Alexandria the motif is found, in the first place, on a group of imported capitals (Ahnâs, Aschmunein, the mosques of Cairo) which are intruders to the local pre-Coptic and Coptic series. But it is

found also sporadically on objects of local workmanship, sometimes relatively unaltered (half-column and capital in the Coptic Museum, ambon-panel in the church of el-Moallâqa, colonnette-capital at Saqqara), more often modified to suit local taste. An interesting example of such modification is a funeral stele in the Coptic Museum, in which the equal-armed cross is replaced by the ankh-cross.¹⁵⁰ More often the motif is simplified by the omission of the ribbons, as in the large series of Middle and Upper Egyptian funeral stelae with plain wreathed crosses. A derivation from the Alexandrian ribboned form seems clear from the existence of such examples as no. 8443 (Greek stela from the Faiyûm, listed above). The ribbons first degenerate into looped dots in the lower angles, and these dots are then treated as purely decorative devices, applicable to all four angles or even to the two upper angles only. In other words, the study of this motif shows that Coptic sculptors were familiar with, and drew upon, the resources of contemporary Alexandria; but that, while they sometimes reproduced their models unaltered, more often these underwent a more or less radical transformation to accord with Coptic capabilities and standards of taste.

In the final section of his article Kitzinger discusses the question whether the sculptural evolution represented at Oxyrhyncus, at Ahnâs, and at Bawît and Saqqara, can be regarded as typical of the entire development of Egyptian art during the fourth, fifth, and sixth centuries, or whether it applies exclusively to the more popular spheres of the hinterland as distinct from Alexandria itself which, according to one theory, remained the centre of a living and cultivated Hellenistic tradition throughout the Christian period in Egypt.¹⁵¹ In a reasoned rejection of the latter view, Kitzinger remarks that purely geographical arguments are not conclusive; for while it is true that all the principal groups of Coptic sculpture discussed lie in the Nile Valley south of Cairo, there is no comparable body of material from the soil of Alexandria itself with which these may be compared or contrasted. The largest surviving body of Christian sculpture available for comparison is the series of capitals from Abu Mîna and from the mosques of Cairo; and these, he maintains, are international in character, and have no more connexion with Alexandria than they have, for example, with Salona, Greece, or Ephesus. In other words, the distinction that can be drawn is valid only in terms of a local and of an official art, not of the arts of two geographical entities, the hinterland and Alexandria; and of the two it is the sculpture of the Coptic Churches that is the more deeply rooted in the Hellenistic art of Egypt.

It is, however, on the evidence of Early Christian ivories, rather than on sculpture, that the theory of a survival of Hellenism in Alexandria is based.¹⁵² There are many students who maintain that a great deal of the finest surviving East Roman ivory-carving of the fifth and sixth centuries, outstanding among them being the Throne of Maximian at Ravenna, are the work of craftsmen working in Alexandria, or at any rate working in the closest contact with Alexandria. Kitzinger does not discuss any of the arguments, primarily iconographic, which are advanced in support of this view. In discussing the character of the sculpture, the Egyptian origin of these ivories must, he maintains, be regarded rather as the object of the whole enquiry than as an argument in favour of one

¹⁵⁰ Marcus H. Simaika Pacha, *Guide Sommaire du Musée Copte*, Cairo, 1937, p. 16, no. 32, pl. xliii.

¹⁵¹ Kitzinger, pp. 210-15.

or the other theory. We have, instead, to look for independent evidence of the survival of a classical tradition in Egypt's fifth- and sixth-century sculpture; and this we do, in fact, find in a few isolated but important works which afford definite evidence of its persistence.

One such work is the carved wooden door from the church of St. Barbara in Old Cairo. It has been published as a fourth-century work;¹⁵³ but a comparison with the ivory carvings, to which it is closely related, shows very clearly that it can hardly be earlier than the close of the fifth century. The vine-scrolls, which have nothing whatever to do with Coptic sculptural tradition, recall those of the Throne of Maximian; while the pairs of flying angels, upholding a bust within a ribboned wreath, bear a striking resemblance to those on the celebrated Barberini Diptych in the Louvre. The same relationship emerges from the study of a second work, a limestone pilaster from Bawît, now in the Louvre.¹⁵⁴ It is carved on one face with a geometric ornament of hexagons, on a second with a delicate medallion vine-scroll with birds and a chalice, which closely resembles the scrolls on the Throne of Maximian. To clinch the relationship, at the top of either face of the pilaster there stands a figure of an angel, which unmistakably echoes the archangel of the celebrated Archangel Diptych in the British Museum. In other words, there were working in Egypt at the turn of the fifth and sixth centuries, the approximate date of the ivories in question, sculptors who followed the classical manner of the ivory-carvers rather than the Coptic style of Ahnâs.

Are we entitled to assume that the work of these sculptors represents a surviving Hellenistic tradition established in Alexandria? Kitzinger maintains that we are not. In the sculpture of Oxyrhyncus he recognises a typically late-antique style, basically international but with certain well-marked local peculiarities. Members of the same late-antique family can be seen in Syria, Asia Minor, Dalmatia, and North Africa. The art of Oxyrhyncus is provincial indeed; but it reflects tendencies widespread in the late-antique Mediterranean world; and the source from which it was immediately derived can hardly be other than contemporary Alexandria. By contrast, it cannot be shown that the St. Barbara doors or the Bawît pilaster have any forerunners in Egypt; it is they therefore, and not the Coptic sculptures, which represent an element foreign to the Egyptian tradition. This element is not an Alexandrian style at all, but a court style, an essential characteristic of which is that it transcended provincial boundaries. 'The basket capitals found at Bawît and Saqqara are an obvious example of Byzantine court art influencing Egypt in the sixth century. The style of the St. Barbara door and of the Paris (i.e. Bawît) pilaster must be explained in a similar way. We cannot call it an Alexandrian style. The artists who did such work in Egypt in the sixth century must have been trained in the court atmosphere of Byzantium. If we want to see what had by that time happened to Egypt's own tradition of Hellenistic art, we must not look at these few and isolated monuments, but at the genuinely Coptic sculptures in the monasteries of the Nile Valley.'¹⁵⁵

It is not within the scope of the present article to examine in any greater detail than does Kitzinger, the arguments which have been advanced for an attribution to Alex-

¹⁵³ A. Patricolo and U. Monneret de Villard, *La chiesa di Santa Barbara al Vecchio Cairo*, Firenze, 1922. Illustrated by Kitzinger, pl. lxxvi, 1; and by K. A. Creswell,

andrian craftsmen of such ivories as the Throne of Maximian or the British Museum Archangel Diptych. In general terms, it may be remarked that the iconographic method undoubtedly has its pitfalls, and the validity of its conclusions must rest ultimately upon a hard core of independently established fact: but that, so far as the present writer is aware, no critic has attempted to dispose in detail of the elaborate structure of iconographic argument upon which this thesis is based; nor is sufficient regard always paid to the very considerable body of independent evidence by which it can be shown to be linked to such known Egyptian antiquities as the frescoes of the Alexandrian catacombs and of the Coptic monasteries or to the peculiarly Egyptian literary versions of the familiar bible stories.¹⁵⁶ It may well be that not all the ivories claimed as Alexandrian were made in Alexandria itself; it is arguable, for example, that the Throne of Maximian was made in Constantinople by Alexandrian craftsmen working under imperial patronage. But even if this were so, it would still seem to be necessary to postulate a continuous tradition in Alexandria itself to account for the continued and consistent employment of seemingly Egyptian elements in this hypothetical, eclectic, court school.

It is, however, with the evidence afforded by sculpture in wood and stone that we are directly concerned; and here there are two important questions of interpretation and of terminology on which it may be suggested that Kitzinger's conclusions require modification. In the first place we have seen that, while admitting the existence in Egypt of a considerable body of Early Christian sculpture, mainly in the form of capitals, which is quite distinct from the Coptic work of the fifth and sixth centuries, he maintains that this sculpture has no special connexion with Alexandria or with any Egyptian Hellenistic tradition, but belongs to an international, court-inspired art, the products of which found their way indiscriminately all over the Eastern Mediterranean world. This view surely misinterprets both the range and the character of this non-Coptic Egyptian Early Christian sculpture. Antiquity regarded the sanctuary of St. Menas as an Alexandrian shrine; and we have seen that the remains from the soil of Alexandria itself and from the Maryût confirm this evaluation. The body of material is not large; but it is consistent, and quite large enough to show us something of the character of fifth- and sixth-century Alexandrian sculpture and at the same time to point the absence of any trace of contemporary Coptic work. There are a few fragments from Abu Mîna itself, which indicate contact with Coptic ideas. But these lack precisely those mannerisms which are most typical of actual Coptic work and so serve only to underline the fundamental divergence of the two styles (see p. 64).

To describe the sculpture of Oxyrhyncus, of Ahnâs, and of Bawît and Saqqara as in any sense representative of the whole of Egypt is, then, to invite confusion. That its inspiration came in no small degree from Alexandria seems to be demonstrated. But it does not necessarily follow that it was a mere provincial dialect, or that in it we can identify, in rude but recognisable form, the art of Alexandria itself. The capacity of the Coptic artist to select and to transmute borrowed forms in terms of his own vigorous and strongly individual tastes and conventions is well demonstrated in the sixth century in the case of several familiar Justinian forms of capital. This capacity was not new. We see it, for example, in wall-paintings of the earlier Empire from the Faiyûm and elsewhere. It was the centuries-old reaction of the native Egyptian to the alien culture of the

¹⁵⁶ Of particular interest in the present context are the representations of the Menas cycle cited on p. 46.

Delta; and while it may be true to describe the sculpture of Oxyrhyncus and of Ahnâs as a member of a large and widely scattered late-antique family, the element which it possesses in common with other late-antique sculptural styles can be amply explained in terms of like reaction under like conditions to a common source of inspiration: it is not necessary to postulate any closer or more immediate connexion.

The architectural remains tell the same story. At least one feature represented in later Coptic architecture, the use of columnar exedrae in the narthex, can be shown to be derived from Abu Mîna; and it may be that others, such as the *triconchos* chancel, which it shared with Early Christian architecture outside Egypt,¹⁵⁷ found their way into Coptic architecture by way of the vanished churches of Alexandria. But if Abu Mîna be rightly regarded as a representative Alexandrian church, it is abundantly clear from the evidence discussed above in section D (pp. 51-60) that the architecture of Alexandria and of Coptic Egypt followed sharply divergent paths, and that, as in the case of sculpture, there were in Egypt two related but distinct schools of Early Christian architecture.

This brings us to our second question of interpretation and of terminology. Can the Alexandrian art of the fifth and sixth centuries properly be called international? By comparison with that of Coptic Egypt it was undoubtedly cosmopolitan in its connexions; but it is an over-simplification of a complex picture to describe it as 'international', unless the use of that term be very clearly understood and qualified. It is true that individual local schools, and in the present instance the conservative Hellenism of Alexandria, have at times been allowed to bulk larger in the history of Early Christian art than the known facts warrant. The extreme reaction against this excessive localisation is a bald and rather characterless internationalism, in which local traditions are recognised as little more than unimportant variants of the central melody. It is surely truer to regard them as the themes of a great contrapuntal fugue. Each was coloured and modified by its relation to the others: but each in turn contributed its unique and individual quota to the harmonic whole. The capitals of Abu Mîna and of the mosques of Cairo belong to familiar types, representatives of which are scattered throughout the contemporary Christian world. Many of them, however, were not only made in Alexandria but reveal characteristics which appear to be peculiar to Egypt. The individual architectural features of Abu Mîna, too, can without exception be paralleled outside Egypt. But the resultant whole is unique and makes it very clear that the architecture of Alexandria was far from being a colourless copy of models developed elsewhere. The early appearance of such features as the spherical-triangular pendentive and the squinch in this light acquires added significance. Indeed the importance of Abu Mîna lies very largely in the evidence which it affords of the continued individuality of Alexandria as a centre of the arts. It does not tell us as much as we should like to know: still less does it afford any direct evidence as to the source of the disputed ivories. It does, however, help to clear the ground, by putting the sculpture of Coptic Egypt into its true perspective; and it does suggest that further research at Abu Mîna itself and in the many Christian sites of the Maryût may yet throw fresh light on one of the fundamental outstanding problems of late antique research, the contribution of Alexandria to the *Koinè* of Early Christian art and archaeology.

¹⁵⁷ U. Monneret de Villard, *Les couvents près de Sohag*, Milan, 1925, chapter III.

THE CHURCH OF SAN SALVATORE AT SPOLETO: SOME STRUCTURAL NOTES

THE church of San Salvatore, on the outskirts of Spoleto, is a monument as familiar as it is puzzling. Together with the closely related Clitumnus temple, 10 km. distant between Spoleto and Trevi, it has been the subject of at least one monograph and of numerous articles, and it figures in all the standard works on late antique and early medieval art in Italy. It first appears in history in a document of 815, confirming to the abbey of Farfa certain possessions, including *monasterium sancti Salvatoris situm prope eandem civitatem* (i.e. Spoleto).¹ The majority of writers have regarded both it and the Clitumnus Temple as the product of a late antique, classicising revival, and have assigned them to dates ranging from the late fourth to the sixth centuries. Recently Deichmann has advanced the novel, but attractive, suggestion that they belong rather to the latter part of the eighth century, and are the work of the Dukes of Spoleto, produced under Carolingian domination and under strong Carolingian artistic influence.²

With the exception of certain obvious major repairs effected during the Middle Ages as a result of fire or earthquake, and of other minor modifications noted by individual authors, San Salvatore has always been regarded as substantially a structural unity. This is the more surprising in that there are a number of features, notably in the presbytery, which on close inspection strongly suggest a more complex origin. In December 1946 the relaying of the floor in the presbytery and in parts of the nave offered an occasion to throw fresh light on this point. Through the courtesy and with the generous help of Prof. A. Bertini-Calosso, Superintendent of Monuments and Galleries for Umbria, Prof. E. Josi, Dr. Erik Sjöqvist, Director of the Swedish Institute of Classical Studies in Rome, and the writer were enabled to spend three days on the site, and to make some modest trial excavations below the present floor-level. The object of these was to establish, by an examination of the foundations, whether or not the building was planned at the outset in the form in which, substantially, it now stands. A far more extensive examination of the structure would have been required to make any significant contribution to the disputed questions of art-historical attribution and chronology. These are in any case already in the able hands of Prof. Mario Salmi, to whom the results of the researches, which form the subject of this note, have already been communicated. The present report is strictly limited therefore to the immediate results of the inquiries undertaken in 1946.

The sections reproduced in Figures 2-6 are the work of Mr. N. I. Rosén, at the time a member of the Swedish Institute. They have been prepared for publication by Mr. Richard Fraser, Rome Scholar in Architecture at the British School, who has also prepared the plans. Our thanks are due for the courteous help given by Prof. G.

- P. Toesca, *Storia dell'Arte Italiana: il medioevo*, Torino, 1927, pp. 93-7, 135-6.
- A. Haseloff, *Pre-Romanesque Sculpture in Italy*, Firenze, 1930, pp. 25-7, pls. 23-4 (S. Salvatore) and 25-7 (Clitumnus Temple).
- U. Tarchi, *L'arte nell'Umbria*, vol. II, *L'arte cristiano-romana*, Milan, 1937, pls. I-XI (Clitumnus Temple) and XIV-XXV (S. Salvatore).

The church of San Salvatore has been so often described and illustrated that a brief summary of the main features will be sufficient in the present context. Despite the successive ravages of earthquake, fire, neglect, and restoration,³ it is still possible to determine, with some degree of certainty, the general lines of the structure, as it appeared at the time of its maximum development. It is a three-aisled basilica, oriented approximately east-west, with a separate presbytery, at a slightly higher level than the nave and divided from it by a triumphal arch. The lateral aisles run right through; but they are subdivided by transverse arches on the line of the triumphal arch, so as to form what, on plan at any rate, may be described as a contained transept. There is a lofty central apse; and flanking it two projecting, rectangular chapels, opening off the lateral aisles and each in its turn ending in a small projecting apse.

The elaborate façade is not of immediate relevance to the present report; and it is in any case too well known to require detailed description.⁴ Of the original lateral colonnades of the nave, the responds at either end and the plinths of the eight intermediate columns alone survive. At some later date, probably after an earthquake,

³ An idea of the state to which the building had been reduced by the nineteenth century can be had from the admirable plans and sections executed by Montiroli in 1871, now preserved in the Municipal Picture-gallery at Spoleto (Anderson photos 5923-6). The restoration of

the church to its present form was begun by Sordini in 1906.

⁴ For a restored drawing of the façade in its original form, see Tarchi, *op. cit.*, pl. XV. The restoration is reasonably certain.

the architrave was replaced by an arcade of round-headed arches, built, in part, of re-used material; and this arcade was itself later built up and suppressed. The original order incorporated a curious assortment of elements: Attic bases, columns faceted at the base and fluted above; Doric capitals, architrave and frieze; marble Corinthian cornice; and above this traces of a blind order in stucco over a core of rough masonry, identical with that above the colonnades of the presbytery (Pl. XV, 1).

The presbytery is better preserved. At the same time as the nave was rebuilt, with lateral arcades replacing the original architraves, two rough columns were inserted to support weak points in the presbytery colonnades. Otherwise the structure presents substantially the same appearance as it did in antiquity (Pl. XII, 2). The dome above is octagonal and

SPOLETO, S. SALVATORE

FIG. 1.

rests on flat, triangular pendentives. These in turn spring at each angle from a curious pedestal-like feature, set above the cornice of the angle order. It should be noted that, while the architectural scheme, with lofty half-columns flanking the triumphal arch and the apse and linked each to the adjacent angle column, inevitably tends to concentrate attention on the major axis, the presbytery is in fact almost square and is vaulted symmetrically about both axes.

The two lateral chapels, of S. Isidoro on the north and S. Agostino on the south,⁵ are cross-vaulted, above a delicate terra-cotta cornice. The plan, with its untidy projection beyond the central apse, is strongly suggestive of an afterthought. Both chapels are well askew to the main axis of the building; and the displacement of the outer walls relative to the outer walls of the presbytery aisles is a feature with no

⁵ The names of these chapels appear on Montiroli's plan. Their dedications, like those of the church itself,

may well have changed several times since antiquity. They are here retained for convenience.

apparent structural meaning, that contrasts strangely with the careful symmetry of the rest of the structure.

It will be seen that the plan contains a number of unusual elements. For a proper appraisal of their significance, it is essential to establish whether all of these belong to the original structure, or whether some may be the result of later modification. In particular the presbytery, with its elaborately supported dome, and the east end, with its projecting side-chapels, suggest the possibility of successive phases of building activity. With a view to establishing these doubtful points, if possible, upon an objective basis, six test-trenches were dug, two in the nave and four in the presbytery. The results of these excavations are summarised in the paragraphs which follow.

Test-trench 1, at the W end of the S aisle, in the angle between the inner face of the façade and the S nave colonnade.

The masonry of the façade and of the respond of the colonnade are both preserved *in situ* at this point, though superficially much battered. The half-column of the respond consists alternately of half-drums and of longer blocks tongued into the masonry of the wall, a technique repeated in all four nave responds. The ground at this point proved to be made up and much disturbed, with traces of burials to a depth of at least 80 cm. The natural slope of the ground, downwards from E to W, is such that, in contrast to the trenched footings of the presbytery and apse, the footings here were built free-standing. Façade and stylobate are of one build and certainly contemporary.

Test-trench 2, at the E end of the nave, in the angle between the triumphal arch and the N nave colonnade (Section A-B; Fig. 2).

The respond is preserved substantially intact and repeats the constructional formula of the SW nave respond. Of the wall and half-column which project S to carry the triumphal arch, a part of the wall-surface adjacent to the angle is alone ancient. The half-column itself, the plinth, and the steps up from the nave into the presbytery are all modern.

Excavation in the angle, a short distance below floor-level, revealed compact, undisturbed ground, into which were trenched roughly coursed, rubble and cement footings. The stylobate of the nave colonnade and the transverse footing which carry the triumphal arch are of one build and certainly contemporary. The latter is continuous across the nave.

Test-trench 3, in the NW angle of the presbytery, exposing the footings of the NW angle column supporting the dome (Sections A-B and C-D; Pl. XIII, 2; Figs. 2 and 3).

With the exception of the modern plinth and facing to the triumphal arch itself, the masonry of this angle appears to be substantially ancient. The angle column is raised on a massive, rectangular, limestone plinth, which rests in turn on a footing of irregular blocks, roughly trenched into the undisturbed clay subsoil. Plinth and footing are alike demonstrably secondary to the far more substantial foundation of the triumphal arch (Section A-B). The plinth must, on the other hand, already have been in position when the respond of the N presbytery colonnade was built in its present

FIG. 3.

form; for the former, and the base of the column upon it, are both firmly locked into position by the masonry of the respond (Section C-D). Later again than the plinth of the angle column is a broad, shallow footing of plaster-rubble, running E and W between the NW and NE angle columns, parallel to, and trenched against, the stylobate of the N presbytery colonnade. The latter is identical in materials and build with the nave stylobate and the foundation of the triumphal arch. The plaster-rubble footing can be seen on Montirolì's plan. It is one of a pair, the other member of which, in the corresponding position on the S of the presbytery, appears in a photograph taken during the restoration of the presbytery earlier in the century.⁶ Both are presumably to be connected with the late, longitudinal screens, the scars of which appear on each of the four angle columns.

Test-trench 4, in the NE angle of the presbytery, exposing the footings of the NE angle column supporting the dome (Sections E-F and G-H; Pls. XIII, 1 and XIV, 2; Figs. 3 and 4).

As in the NW angle, the angle column is raised on a massive limestone plinth, wedged into place with smaller blocks and resting on a rough rubble footing, trenched into the undisturbed clay subsoil. This footing is very shallow, and was certainly cut after the transverse foundation, which constitutes the chord of the apse, was already in position (Section G-H and Pl. XIV, 2). This latter foundation is identical in materials and build with the corresponding foundation of the triumphal arch and the stylobates of the lateral colonnades.

The plinth of the angle column overrides the base of the E column of the N presbytery colonnade in a manner which suggests that the latter may have been below floor-level when the angle column was inserted; and both the plinth and the base upon it are locked into position by the masonry of the colonnade respond. There is the clearly marked trace of a floor-level 14 cm. below the top of the plinth, (visible in Pl. XIV, 2), corresponding to the level of the fragment of medieval pavement in *opus sectile*, which survives in the middle of the presbytery just in front of the apse. Montirolì's plan shows that in 1871 more of this pavement survived. There are traces of a second floor-level also on the same plinth, about 10 cm. below the first.

Test-trench 5, in the N angle of the apse.

The purpose of this trench was to examine the relation between the foundations of the apse and the transverse N-S foundation, which constitutes the chord of the apse. The former were found to be surprisingly unsubstantial, consisting of loosely concreted rubble laid in a shallow trench dug into the compact, natural clay. The top of this trench is now exposed as much as 20 cm. in the centre of the apse, and can never have been far below floor-level. At the junction of the two foundations, those of the apse were certainly dug when the others were already in position; and it seems improbable that the original builders, the rest of whose foundations are so robust, should have been content with anything so flimsy. Theoretically, however, it could be argued that, in view of the sharp rise in ground-level towards the E, nothing more

⁶ Ministero della Pubblica Istruzione, Gabinetto Fotografico Nazionale, Neg. C.2065.

FIG. 4.

was needed here; and that, while the structural relation is not in doubt, no chronological distinction is necessarily involved.

The same element of doubt holds good of the structures above ground. The two engaged half-columns, which flank the apse, are taken, together with their capitals and bases, from the same classical monument as the adjacent NE and SE angle columns of the presbytery. From the careful matching and levelling of the two pairs, it would appear that all four were incorporated into the structure at the same moment. Unfortunately, from an examination of the relation between the half-column and the masonry of the apse, it is not absolutely certain which of the two is structurally the earlier. Of the alternatives, by far the more probable is that the masonry of the apse was built up against the half-column and is, therefore, probably contemporary with it (Pl. XIV, 3, illustrating the corresponding junction on the S side); but the character of the junction does not absolutely preclude the careful cutting-back of the masonry of an existing apse to house an inserted half-column.

Test-trench 6, in the NW angle of the NE chapel (chapel of S. Isidoro).

Excavations at this point revealed the presence of a bone-vault, which has completely obscured all earlier traces. In the structure of the N wall, however, especially below floor-level, there are traces of a straight joint, marking the point at which the N wall of the chapel strikes off from the seemingly earlier E wall of the presbytery aisle. The attempt to confirm this, by examination of the footings at the corresponding points on the exterior, to the N and to the S, was baulked by the presence of modern, concrete, drainage gullies up against the walls.

The SE angle of the presbytery (Sections J-K, L-M, and N-O; Pl. XIV, 1 and 3; Figs. 5 and 6).

This was not trenched; but a considerable part of the footings is exposed above the present floor-level, and this confirms the results of trenching at the NW and NE angles. The plinth of the angle column overrides the base of the E column of the S presbytery colonnade; and it and the base upon it are in turn locked into place by the masonry of the colonnade respond. In this case there is a gap of 2-3 cm., as if the column had moved slightly since erection. The colonnade respond also overrides the base of the E column of the colonnade. The relation of the half-column flanking the apse to the transverse foundation and to the masonry of the apse itself corresponds exactly to that between the corresponding features on the N side.

Apart from minor patching, the only substantial restoration would seem to be the jamb of the arch leading into the SE chapel (chapel of S. Agostino). Traces of three floor-levels can be seen on the plinth of the angle column, 18, 32, and 50 cm., respectively, below the top (visible in Pl. XIV, 1). The middle one of these corresponds to the medieval, *opus sectile* pavement.

The results of these test-excavations are limited, but important. They may be summarised as follows:

(a) Of the foundations examined, only the stylobate of the nave and presbytery colonnades and the three transverse foundations, of the façade, of the triumphal

FIG. 6.

arch, and across the base of the apse respectively, belong certainly to the original structure. The footings of the angle columns are palpably a later insertion; and the relation between the masonry responds of the presbytery colonnades and the bases of the angle columns shows that these responds too, at anyrate in their present form, are a secondary feature. In other words the original presbytery must have been quite a simple square structure; the insertion of the angle columns and the substantial strengthening of the existing piers belongs to a later structural phase, to be connected no doubt with the substitution of the present dome in place of an original timber roof.

(b) The existing apse is structurally secondary to the original building. On balance the evidence strongly suggests that it was actually a later addition, contemporary with (or indeed later than) the insertion of the angle columns of the presbytery; but the evidence falls short of absolute proof. There is of course nothing whatever to show that there may not have been an earlier apse, on a slightly larger radius.

(c) The hypothesis, based primarily on the evidence of plan, that the two lateral east chapels of S. Isidoro and S. Agostino are secondary additions to the original structure, is supported by the examination of the north wall of the former. Decisive archaeological proof, however, would require further excavation.

These results receive ample confirmation from an examination of the superstructure. The colonnades of the original building, as exemplified in the nave, are characterised by the use of the Doric architrave and triglyph frieze, with their associated Corinthian marble cornice, and by the traces of a blind upper order, carried out in stucco over a masonry core. It is patent that, in the presbytery, these elements are structurally anterior to the insertion of the angle columns and of the vault, and have suffered considerably from the insertion of these later features. In every case the stucco pilaster has been bisected by the cornice of the adjacent angle column. At the north-west angle of the presbytery the corner of the earlier cornice has been knocked off to accommodate the top drum of the angle column; and at the north-east angle, the capital of the angle column has been cut away to accommodate the corresponding corner of the cornice. In the nave the surviving pilaster of the upper order at the end of the nave colonnade is masked by the cornice of the triumphal arch. In short, the present arrangement makes nonsense of the carefully planned and executed architectural scheme which, even in its present fragmentary state, the interior of the original structure can be seen to have embodied.

The original presbytery was a simple, square structure with flanking aisles (Fig. 7). The absence of any provision in the foundations to carry extra weight indicates that it was almost certainly timber-roofed; and it probably took the form of a low central tower. High up in the centre of either side, above the two windows and immediately below the vault, can be seen part of a projecting masonry pilaster, identical with those of the stucco engaged order beneath.⁷ It can hardly be other than the remains of a similar feature, the rest of which has since been destroyed by the insertion of the dome and

⁷ Visible in pl. XII, 1, above and to the right of the nearer window. This feature seems hitherto to have

escaped attention, and was noticed by Dr. E. Fischer.

of the successive later windows. A low tower with an open roof would have needed no lateral support other than that afforded by the internal cross-walls of the presbytery aisles. That these aisles were roofed continuously with the nave aisles, and did not constitute a distinct transept, separately roofed, seems to be proved by the continuation through the presbytery, at the level of the sill of the existing windows, of the same marble cornice as once ran the length of the central nave, below the clerestory and above the nave aisles (Pl. XVII, 1 and 2). A fragment of this cornice can still be seen on the south face at the south-west angle of the building. There are suggestions of an earlier decorative treatment of the exterior of the central tower above the level

SPOLETO, S SALVATORE
PLAN OF ORIGINAL STRUCTURE

FIG. 7.

of this cornice⁸; but there is no clear evidence of its date relative to the other surviving features.

The only difficulty, which, at first glance, the sum of these conclusions might seem to present, is that the whole elaborate order of the angle piers of the presbytery must be later than the cornice of the lateral colonnades. The two are so remarkably similar, both in workmanship and in architectural effect, that it is hard to believe that they are far separated in date. The difficulty is, however, more apparent than real. Even if we assume that none of the material is re-used, there is nothing to show that the two constructional phases did not follow closely the one upon the other. There are, it should also be noted, minor, but consistent, differences between the two groups. In the cornice of the lateral colonnades the ornament of the cyma is an overlapping leaf-pattern (Pl. XV, 3); in the two cornices of the angle piers, and in that of the apse,

⁸ These are traces of what may have been a projecting pilaster between the arches of two windows (the jamb between the windows is modern, replacing the window

visible in Montirol's drawings), and of a horizontal course in dark stone above the windows; see pl. XVII, 2.

it is a repeated vertical fluting (Pl. XV, 2). These differences may, or may not, prove to be significant. In any case the evidence of structural succession is perfectly clear, and must itself form the basis of any stylistic inference.

Evidence of structural modification is clear at the east end also. The two lateral chapels of S. Isidoro and S. Agostino project well to the east of the central apse. The space between is filled with a lofty arch (Pl. XVI, 1 and 3). The outer face of the apse is straight; and the coursing of the masonry is continuous with that of the lateral chapels (Pl. XVI, 2). Apse and chapels are certainly contemporary. The central arch is, equally clearly, a later insertion (Pl. XVI, 4). If the lateral chapels and, at any rate in its present form, the apse are themselves additions to the original structure, then the arch in the centre of the east façade offers clear evidence of yet another phase of monumental building activity.

The insertion of this arch, with its narrow voussoirs, hood-mould, and cornices, all in a dark, contrasting stone, was part only of a more extensive programme of work, which affected the presbytery also. The large double windows on either side of the presbytery itself and in the presbytery aisles have been restored in modern times; but enough remains of the original work, particularly on the north side (Pl. XVII, 1), to show that they were built in the same distinctive manner and materials as the arch, and they must certainly be contemporary. These windows were themselves later suppressed and replaced by those which figure in Montiroli's drawings. Between them they seem to have obliterated all trace of the earlier lighting-arrangements for the presbytery.

It will perhaps be as well, in conclusion, to indicate briefly certain problems upon which the present investigations have thrown no direct light. The first of these concerns the source of the re-used classical material. It has been suggested that the church stands on the site of a pagan temple; and the character of the dedication lends colour to the suggestion. The excavations here described revealed nothing that could be ascribed to such a building. The earliest foundations exposed, with their carefully graded levels, are certainly those of the existing structure. This does not, of course, preclude the existence of an earlier building on other foundations. It may be remarked, in passing, that the remains of Roman Spoleto, re-used in the medieval city, reveal an unusually high percentage of Doric architectural elements.

Another unresolved problem is that of the disparity between, on the one hand, the pair of cornices which flank the triumphal arch and, on the other, those which flank the apse. Both pairs must belong to the second structural phase; and yet, while the western pair is carefully and accurately fitted to the complex profile of the pier, and would seem to have been made expressly to fit the position which it now occupies (Pl. XV, 2), each member of the other pair consists of two distinct cornice-blocks, cut and joined with a crudity that is wholly inconsistent with the delicacy of their detailed treatment, and strongly suggests a re-use of existing material (Pl. XII, 2). The strange, pedestal-like elements, which are interposed between the order of the angle piers and the spring of the vault, present a similar dilemma. The die of each is carved on the two exposed faces only; and they have all the appearance of having been made expressly to serve their present purpose: indeed it is hard to imagine what other architectural function they could ever have fulfilled. Nevertheless, it seems clear that two at any rate of the four are in fact re-used; for in both cases detailed inspection reveals that the cornice,

which is carved in one piece with the die, is returned for a short distance along one of the engaged faces, in the one case (at the south-east angle) with a further return, to form a small re-entrant feature on the angle.⁹ The significance of these facts has yet to be determined. They deserve statement, however, if only as an indication of the structural problems still to be elucidated before any proper appraisal can be made of the significance for the history of architecture of this important and puzzling monument.

J. B. WARD PERKINS

⁹ Pl. XV, 4, illustrates the corresponding feature at the SW angle. The return of the cornice moulding on one of the engaged faces is just visible at the top left corner.

DOCUMENTS FROM THE ANGEVIN REGISTERS OF NAPLES: CHARLES I

THE deliberate, senseless destruction of the documents belonging to the Grande Archivio di Stato of Naples is one of the greatest, if not the greatest, single crime against history committed by the German army during the late war. The circumstances and the results of the act which reduced to ashes this vast collection of records of Southern Italy, covering more than a thousand years, are not as widely known among scholars, much less the general public, as they should be, and they seem therefore to call for some brief account in order to explain the reason of the present publication. Evacuated because of the dangers of air-warfare over Naples from the Archivio to the Villa Montesano near to S. Paolo Belsito some thirty kilometres away, and packed for the most part into 866 solid cases, this priceless treasure of over 30,000 MS. volumes and 50,000 documents under the charge of a keeper of Archives remained undiscovered by the German command until the Allied troops were already approaching.

On 28 September, 1943, however, a foraging party came to the Villa in search of calves wanted for food and found instead cases of records stored for safety. Next morning an officer accompanied by a single soldier arrived; he ordered one of the chests to be opened and carefully inspected the volumes packed within. After the purely historical nature of the deposit had been explained to him and its immense importance from this point of view, he professed himself satisfied and departed. His visit did not arouse the suspicions of the Superintendent of the Naples Archives, Conte Riccardo Filangieri di Candida, who was staying at the moment in the neighbourhood, because so far no hostile act had been committed against any institution of art or learning. Nor was he seriously apprehensive when early on the morning of 30 September he was informed that a further party had appeared late on the previous afternoon and had spent some time in the vaults, apparently on the pretext that munitions were there concealed. He believed that even if any attempt were made to blow up the Villa the packing-cases were too stout and too well stacked for the documents to be greatly damaged. But he wrote an official letter to be given to the local military authorities, explaining briefly that the deposit was the property of the State Archives of Naples and of historic interest alone; and that not only for Europe at large, but also for Germany and German students—the surviving fragment of the original Register of the Emperor Frederick II was there. These facts could easily be verified, he added, by reference to the German Historical Institute in Rome.

All was in vain, for total destruction had been decreed. As the bearer of the letter was returning to the Villa he met an incendiary squad of three German soldiers on motor cycles, armed with machine guns, who announced that within a quarter of an hour they would have set fire to the whole deposit. The letter was given to the non-commissioned officer in charge—it was even read to him in French translation because he understood little Italian—but he snatched it roughly away and flung it to the winds. Refusing to allow any delay or time for inquiry, the officer put the whole responsibility on his

anonymous superiors when he exclaimed: 'Comando conoscere tutto, ordine bruciare.' Who these superiors were has never been satisfactorily established, because it was later found that the local command at Nola had already retreated. The order may therefore have come either from some general still in the neighbourhood or from Headquarters at Naples, the instrument of the planned acts of destruction, which were carried out on the eve of withdrawal. But the soldiers obeyed their orders, whatever the source, only too faithfully: they put straw and incendiary powder in the middle and in the four corners of each room, and setting fire to it all, in less than an hour the records of a millennium had perished in the blazing pyre. 'Their destruction,' it has been said with pitiful truth, 'has created an immense void in the historical sources for European civilization, a void that nothing can ever fill.'¹

Among the most precious of the documents destroyed were the 507 volumes which contained the records emanating from the Angevin chancery between 1265 and 1434, and which until the fatal 30 September had survived all the vicissitudes of war, earthquake and rebellion during centuries. Outstanding among them were the 378 stately Registri, written on parchment and bound in leather and the 4 Registri nuovi; the 66 Fascicoli of administrative acts on paper from the XIII and XIV centuries; the 38 volumes of Arche in pergamena and the 21 volumes of Arche in carta.² Together they afforded a veritable store-house of information concerning the former kingdom of Sicily, both in its island and its continental provinces, in every aspect of its life. Generations of historians and antiquaries have searched its riches for the facts which each needed for his particular subject of inquiry, and never have they searched in vain.

The systematic study of the Registri began in the second half of the XVI century when the then surviving loose quaternions were bound into 436 thick volumes, although in unbelievable disorder of chronology and confusion of different classes of documents. This disorder continued to hamper scholars until by the labours of Paul Durrieu (1885-7)³ a detailed analysis of the contents and structure of each volume was made, a work carried to perfection by Bartolommeo Capasso in 1894.⁴ But in spite of all the difficulties presented by the Registri, genealogists, antiquaries and historians from 1604 onwards were making copious extracts from them for their specific studies concerning noble families, officers of state, local history and later on general history or the history of particular reigns. Of these works much has remained in manuscript in various libraries, but much during the past three centuries has found its way into print in monographs and learned periodicals. At the same time scholars and archivists laboured to compile 'Notamenta', i.e. repertories, summaries and indices of registers, either entire or partial, in order to facilitate their use. Among them were the repertories of the archivists: Pietro Vincenti (1610-1614), Sigismondo Sicola (1673-1710) and Michelangelo Chiarito (1759-1763). More complete and detailed than these was the vast array

¹ For further information see the 'Account of the Destruction of the Naples Archives, compiled by the Superintendent of Archives, Conte Riccardo Filangieri di Candida' in *Italian Archives during the War and at its close*, compiled by Hilary Jenkinson and H. E. Bell, London, H.M. Stationery Office, 1947, pp. 44-6; see also the report 'Rovine di Guerra in Napoli', presented by Ernesto Pontieri to the Deputazione napoletana di Storia

patria in *Archivio storico per le Provincie Napoletane* LXVIII, 1943.

³ P. Durrieu, *Les Archives angevines de Naples*, 2 voll. (Bibl. des Écoles françaises d'Athènes et de Rome, fasc. 46, 51), Paris, 1886-7.

⁴ B. Capasso, *Inventario cronologico-sistematico dei Registri angioini*, Naples, 1894.

of 'Notamenta' produced by Carlo de Lellis in the half-century before 1701. Besides his work on individual families, much of it still extant in the Biblioteca nazionale at Naples, while much perished in the flames at Villa Montesano, was the invaluable collection of abstracts of whole series of records in the ancient Archivio della Regia Zecca, and more particularly the eleven volumes of 'Notamenta ex Registris; ex Fasciculis; ex Archis'. This collection, after passing through several hands, was acquired in 1925 by the Italian Ministry of the Interior on behalf of the Archivio di Stato of Naples.¹ The 'Notamenta ex Registris' included abstracts of Registers, lost at various times subsequent to 1701, and those for the reign of Charles I were fortunately published in 1939 under the title of *Gli Atti perduti della Cancelleria Angioina, Parte I, 2 voll. a cura di Bianca Mazzoleni*. The rest of this material remained in the Archivio and in consequence some of the volumes, namely those covering the reigns of Charles I, Joanna I and the sovereigns of the House of Durazzo were among the 26 Repertories which shared the fate of the original records in 1943. The other volumes survived.

With signal courage and devotion in face of the immense disaster, Conte Riccardo di Filangieri, helped by his assistants in the Archivio, is bending every effort to the task of reconstituting volume by volume, so far as is humanly possible, the lost treasure of the Angevin Registri and Fascicoli. Leaving aside for the time being the collection of the documents, which, although scattered in innumerable books and periodicals, are yet safely in print, he is concentrating first on the recovery of transcripts, photographs and microfilms of unpublished material still in the hands of scholars, both Italian and foreign, or their representatives. Among them the collections of G. M. Monti and E. Pontieri in Italy, A. de Boüard and E. G. Léonard in France, E. Sthamer and others in Germany, have yielded a great quantity of documents.

It is in the hope therefore of making a contribution however exiguous to the vast undertaking of reconstructing the Registri that the present small collection of 303 items is offered. With it must go some explanation of their origin and scope, and also of the method followed in arranging them for publication. In the first place it should be said that the documents here printed consist partly of complete transcripts, or of extracts or even of mere summaries, but all made from the records themselves, and partly of copies of the 'Notamenta' of Carlo de Lellis. Next it should be made clear that they are drawn exclusively from the Registri for the reign of Charles I of Anjou, leaving, it is hoped, to some future occasion the printing of documents from the Registers of other reigns and from the Fascicoli and Arche. All the Registers for Charles I, i.e. the numbers 1-49, are represented, with the exception of numbers 9, 15, 20, 36 and 47; and also of numbers 12 and 19, which in fact belong to the reign of Charles II. The repertories of De Lellis brought under contribution are the 'Notamenta ex Registris' I, II and VI. Even the briefest summaries are included, because they are in many cases the sole surviving record of the document.

All the transcripts were in the possession of three English scholars, the late Sir George Hill, Mr. A. Walter James and the present editor, having been made either

¹ For the history of the documents of the Angevin chancery and the repertories see R. Filangieri di Candida, 'Notamenti e repertori delle Cancellerie Napoletane com-

pilati da Carlo de Lellis e da altri eruditi dei Secoli XVI e XVII', Naples, 1927.

personally by them, or on their behalf by members of the Archive staff in Naples. The documents were chosen to illustrate the specific subjects of their study, as here described:

1. The late Sir George Hill, K.C.B. (formerly Director of the British Museum) was concerned in his *History of Cyprus*, with the negotiations between Charles I and the Demoiselle Marie d'Antioche, and Signorina Dott. Iole Mazzoleni summarized briefly a number of documents (in some cases already published) referring to the lady, and others relating to the Angevin occupation of Acre (Acoi) under Roger of S. Severino, Count of Marsico. Owing to the state of war which existed from 1940, the full transcripts could not be completed.

2. A. Walter James, Rome Scholar 1935 (late Senior Demy of Magdalen College, Oxford; Arnold Essay Prize, 1934), for the purpose of a projected study of the 'Foreign Policy of Charles I', carried out researches in the Registers, making transcripts himself and further commissioning the help of Signorina Dott. Bianca Mazzoleni, who made short notes of relevant documents and full transcripts of a considerable number. The subjects illustrated include: The Tripoli Crusade of 1270; the Corn-Trade of Naples and Sicily; the Angevin Administration of Achaia and Acre; the Preparations, diplomatic and military, for the war of 1283 in Sicily.

3. The present editor made extensive researches over a number of years in the Registers, the Fascicoli and the Arche, as well as the Notamenta of De Lellis, for the history of the Counts of Molise and Marsia; the history of the family of Lupara in the Contado di Molise; and Feudal Service and Adohamentum in the Kingdom; she copied many items either in complete transcripts or in extracts; two documents were transcribed by Cav. Pietro Spadetta of the Archivio; and Signorina Bianca Mazzoleni carried out careful searches in the 'Notamenta' and made a number of transcripts from the Registers and Fascicoli.

An effort has been made to include in this edition only documents which have not already been published in full, and likewise only summaries not already published as such; in a few instances texts are given in full which have hitherto been represented in print by summaries only. Nevertheless it has not been possible to make an exhaustive search of all existing printed sources and the previous publication of some documents may have escaped notice.

In conclusion some notes must be given in explanation of the method of the edition:—

1. The documents are arranged by register and folio in numerical order, irrespective of subject matter, because it has been thought that this will most readily assist the reconstitution of the Registers, the objective of the edition.

2. Each item has been given a number running consecutively, and under the number will be found:

a. The complete transcript, the extract or the summary, as the case may be, made from the original register.

b. The transcript from the 'Notamenta' of De Lellis in smaller type. It must

be noted that many documents are represented by either a. or b. alone; but in some instances there is a transcript both from the Register and the 'Notamenta'.

c. The date of time and place as fully as is possible from available information.

d. References to citations; to any further copy extant in another register, a repetition caused by the practice of drawing up a document in duplicate, triplicate or even quadruplicate for the use of the various departments of government; and finally to other documents dealing with the same subject.

e. The initials of the transcriber:

A. W. J. = A. Walter James

E. M. J. = Evelyn M. Jamison

B. M. = Bianca Mazzoleni

I. M. = Iole Mazzoleni

P. S. = Pietro Spadetta.

f. The reference to the relevant portion of the register in P. Durrieu, *Les archives angevines de Naples*, vol. I, and in B. Capasso, *Inventario dei Registri angioini*.

3. Spelling follows that recorded by each transcriber, except that the modern English use of i and j, u and v has been consistently adopted in transcripts from the Registers; modern punctuation has been introduced to a limited extent.

4. Lacunae in the original document are indicated by three dots; suggested readings to supply lacunae or illegible words are enclosed in square brackets.

5. Explanatory additions by the transcriber are enclosed in round brackets; similar additions by the editor are in round brackets with the abbreviation *ed*.

6. Italic is used when part of the text is given in an English rendering or paraphrase.

7. Abbreviations of the titles of books frequently cited are given in the appended short list of books and articles which have yielded the most important bibliographical information.

DOCUMENTS FROM THE ANGEVIN REGISTERS OF NAPLES:
CHARLES I

No. 1. REGISTRO ANGIOINO, No. 1 (1268 A) f. 144 t. 1278, 2 April, Ind. VI,
Torre di S. Erasmo, near Capua

Magistris portulanis et procuratoribus Apulie et Aprucii. Pro Thomasio de Sancto Severino (transmictendo patri suo Rogerio de Sancto Severino, *ed.*) comiti Marsici in Regno Jerosolimitano Vicario, ut exire faciant pro eo equos, mulos et alia victualia. Aput Turrin sancti Herasmi. [Summary I. M.]

Note: The words in brackets were not included in the summary.

Cit. M. Amari, *La Guerra del Vespro Siciliano* 2^a. ed. Paris, 1843, p. 85 and n. 2, who gives the references to documents on this subject from Reg. Ang. I. (1268 A) for March, April, May, June, July and August. Alexis de Guignard, Comte de Saint-Priest, *Histoire de la Conquête de Naples*, Paris, 1847, t. III, p. 291, n. 2, 'Rescripts de Charles 1^{er}, de mars et avril, 1278'; and Sir George Hill, *History of Cyprus*, vol. II, Cambridge, 1948, p. 190, n. 2; for these rescripts, besides the present document, cf. *post* No. 96, issued on the same day and probably another copy of it, and Nos. 129, 130, 131, 134, all with reference to Roger of San Severino, Count of Marsico at Acre. He was Vicar General and Bailiff of the Kingdom of Jerusalem from 1277 to 1282.

P. Durrieu, *Les Archives angevines de Naples* t. I, (Bibliothèque des Écoles françaises d'Athènes et de Rome, fasc. 46, 1886) p. 253, ff. 144-168, 'Littere misse in Apulia', 24 mars au 31 juillet, 1278; B. Capasso, *Inventario cronologico-sistematico dei Registri angioini . . . di Napoli*, 1894, p. 2.

No. 2. REG. CIT. f. 154. 1278, 3 August, Ind. VI, Lagopesole.

Magistris portulanis et procuratoribus Apulie etc., ut reparare faciant quamdam navim hospitalis Sancte Marie Theotonicorum in portu Brundusii existentem, cum que mictere debetur aquam (pro equis *ed.*) etc., ad Rogerium de Sancto Severino in Regno Jerosolimitano vicario pro serviciis nostris apud Acon. [Summary I. M.]

Summarized more fully in C. Minieri Riccio, 'Il Regno di Carlo I d'Angiò dal 2 gennaio 1273 al 31 dicembre 1285' in *Archivio Storico Italiano*, 4^a. serie, t. I, 1878, p. 427 where it is a question of transporting victuals, horses and the necessary water for them, but the ship is erroneously ascribed by Minieri Riccio to 'S. Maria de' Cavalieri Templari'.

Durrieu I, *ibid.*; Capasso, *ibid.*; but the date of this letter is later than the limit of 31 July, noted by these writers.

No. 3. REG. CIT. f. 154. 1278, 3 August, Ind. VI, Lagopesole

Magistris portulanis Apulie et Aprucii, ut mictant duo milia salmarum frumenti de Brundusio aput Acon et faciant ibidem Rogerio de Sancto Severino in Regno Jerosolimitano vicario assignari pro serviciis regis. [Summary I. M.]

Cf. *post* No. 98, in which the same order is repeated, but with the date of 13 August.

Durrieu I, *ibid.*; Capasso, *ibid.*; and the same note as to the date.

No. 4. REG. ANG. NO. 1 (1268 A) contd. f. 155 t.

1278, 9 August, Ind. VI, Lagopesole

Magistris portulanis Apulie et Aprutii pro frumento et ordeo mictendo apud Brundisium et abinde apud Acon cum navi Sancte Marie Theotonicorum et alio vassello.

[Summary I. M.]

Durrieu I, *ibid.*; Capasso, *ibid.*; and the same note.**No. 5.** REG. CIT. f. 160 t.

1278, 28 August, Ind. VI, Lagopesole

Rogero de Sancto Severino comiti Marsici pro magistro Andrea (*sic, ed.*) dicto Nigro capellano et iudici Bartholomeo Bonello de Barolo, qui ab Acon discedere debent ad partes alias pro serviciis regis. (Two documents.)

[Summary I. M.]

Cf. G. M. Monti, 'Da Carlo I a Roberto di Angio', *A.S.P.N.* LVI, 1931, p. 220, who publishes an apparently different letter from the same register and folio, addressed to Roger of S. Severino on 27 August, ordering his assistance for 'venerabili patri P. Occuviensi Episcopo, magistro Guillelmo dicto Nigro cappellano familiaribus et iudici Bartholomeo Bonello de Barolo fidelibus nostris'; that there were two documents of this same import on f. 160 t. was noted by Signorina Mazzoleni. Yet another letter to Roger of S. Severino with the same reference, dated 28 August, referring to the falcons to be sent to the King of the Tartars, is published by Monti, *ibid.*, p. 221.

Durrieu I, *ibid.*; Capasso, *ibid.*; and the same note.**No. 6.** REG. ANG. NO. 2 (1268 O) f. 69.

(1276, June, Ind. IV, Rome)

De Lellis I, p. 1147: Item infrascripti Barones Latini Terrae Idrunti fuerunt submoniti ad comparendum in monstra in Sancto Germano, [videlicet illi qui tenent feudalia an. val. unc. 20 et ultra compareant personaliter] et, qui tenent feudalia infra valorem an. unc. 20 solvant adohamentum ad rationem unc. 12 et medietatis de singulis unc. 20 reddituum ut eorum loco solidentur alii, et feudatarii sunt viz.: . . .

[E. M. J.]

Cit. R. Moscati, 'La Feudalità napoletana nel periodo angioino', *A.S.P.N.* LXI, 1936-7, p. 3, and n. 1.

Note: the words in brackets are not in the transcript from De Lellis, and they have been supplied from No. 69 *post*.

The above mandate refers to the 'contumacious Latin feudatories', who failed to appear at the muster, and their names are published by C. Minieri Riccio, 'Il regno di Carlo I 1273-1285' *A.S.I.*, 3^a serie t. XXV, 1877, p. 41, from the same register, No. 2, f. 68 t. He attributes them to the Justiciarate of the Terra di Bari, but this is an obvious error for the Terra di Otranto, to which the feudatories mentioned may be shown to belong. For a successful petition by three of them, cf. No. 110 *post*; one of them, Roger Maramonte, had already in 1272 been forced to appeal to the king against similar injustice in regard to the muster for Achaia in October, 1272 (C. Minieri Riccio, *Il Regno di Carlo I d'Angiò negli anni 1271 e 1272*, Naples, 1875, p. 92; F. Carabellese, *Carlo d'Angiò nei rapporti politici e commerciali con Venezia e l'Oriente*, Bari, 1911, p. 20, n. 2 (Commissione provinciale di archeologia e storia patria, Documenti e Monografie, vol. X), and F. Cerone, 'La Sovranità napoletana sulla Morea e sulle Isole vicine', *A.S.P.N.* t. XLI, 1916, p. 62 and n. 2).

Durrieu I, p. 255: ff. 62-69, Charles, prince de Salerne, 'Actes adressés aux justiciers sans distinction de provinces', 12 mai au 3 juin, 1276; Capasso, p. 3, Ind. IV (1275-1276), ff. 62-69, Iustitiariis citra Farum.

No. 7. REG. ANG. NO. 3 (1269 A) f. 1.

1269, 12 March, Ind. XIII

De Lellis I, p. 1; *signature appended by Petro Domino Bellimontis Comite Montis Caveosi et Albae Regni Siciliae Camerario to a privilege of 12 March, 1269, Ind. XIII (showing that he was already Count of Albe at this date).* [E. M. J.]

Durrieu I, p. 256: ff. 1-8 'Privilegia', 12 mars 1269 et 20 avril au 19 août, 1273; Capasso, p. 5.

No. 8. REG. CIT. f. 94 t.

1273, Ind. I

De Lellis I; Petro de Tyonvilla commissio capitane Matricis (Amatrice, province of Rieti *ed.*). [B. M.]

Durrieu I, p. 256: ff. 66-102 'Extravagantes infra regnum', 4 mai au 31 août 1273; Capasso, p. 6.

No. 9. REG. CIT. f. 98.

1273, 21 July, Ind. I, Florence

Scriptum est Jozolino de Marra. Cum nobilis vir Johannes de Monteforti Comes Squillacii dilectus etc., futurus vir Margarite primogenite quondam Petri olim domini Bellimontis, Montiscaveosi et Albe Comititis et Regni Siciliae Camerarii ad habendam notitiam teneat de animalibus, victualibus, proventibus et redditibus et quibuslibet aliis bonis seu rebus mobilibus et immobilibus que fuerunt ipsius Comititis Camerarii, *and which are now in the hands of the Curia in the custody of Nicolaus de Satriano, Jozolinus is ordered to make two lists of the goods; one of these he is to keep, and the other is to be given to Nicolaus de Satriano, so that with efflux of time, he may the more fully inform the Count of Squillace concerning the goods.* Datum Florentie, XXI Julii. (*The documents preceding and following are dated Indictionis I = 1273.*) [E. M. J.]

De Lellis I, p. 35: Nobili Joanni de Monteforti Comiti Squillacensi militi viro futuro Margaritae primogenitae quondam Petri de Bellomonte Comititis Camerarii provisio pro bonis dicti quondam Petri, f. 96 et 97, 98, qui Camerarius est Comes Montis Caveosi, et Albae, 98. [E. M. J.]

Cf. C. Minieri Riccio, *Cehni storici intorno i grandi uffizii del Regno di Sicilia durante il regno di Carlo I d'Angiò*, Naples, 1872, p. 164 (12), p. 171 (33).

Durrieu I, *ibid.*; Capasso *ibid.*

No. 10. REG. CIT. f. 111 t.

1273, July, Ind. I

De Lellis I, p. 37: Roberto et Filiberto de Brayda, Uberto Guerzio, et aliis de familiis Rapa et Falet mercatoribus Civitatis Albae pro protectione nostra. [E. M. J.]

Note: this is Alba, province of Cuneo, not Massa d'Albe, province of L'Aquila. For references to these families, see G. M. Monti, *La Dominazione angioina in Piemonte*, Turin, 1930; but these individuals are not there mentioned; Pietro Brayda di Soletto, 'Circa l'origine e il trasferimento dei De Brayda nel Napoletano' in *Rivista Araldica*, Anno XXV, Rome, 1927, p. 29 reports from Reg. ang. No. 5 (1269 C.) f. 231 'un salvacondotto concesso dallo stesso re nel 1270 ad "Ogerium, Antonium, Odonem, Guillelmum, Obertum, Tipaldum, Philippum et Philibbertum . . . Cives Albenses dilectos fideles nostros" dimoranti nel Reame'.

Durrieu I, p. 256: ff. 103-112, 'Extravagantes extra regnum', 28 juin au 8 juillet 1273; Capasso, p. 6.

No. 11. REG. ANG. NO. 4 (1269 B) f. 10 t. 1268, 27 December, Ind. XII, Foggia

King Charles on the occasion of his marriage with Margaret, daughter of the late count Odo of Nevers, grants her the city of Le Mans. The text of the privilege is published: G. Del Giudice, Codice diplomatico del regno di Carlo I e II d'Angiò, Napoli, 1863-1902, vol. II, p. 272, no. XCV.

De Lellis I, p. 52, 53: Margaritae Reginae uxori nostrae, cum qua desponsari debemus in die 18 novembris, Indictione 12, Concessio Civitatis nostrae Cenomanensis ex causa donationis propter nuptias, actum praesentibus Philippo Primogenito et herede Illustrissimi Imperatoris Constantinopolitani, Guidone de Monteforti, Guillelmo de Bellomonte milite, Drogone milite fratre eius, Rogerio Comite Celanensi, Pandulfo de Fasanella, sub datum Fogiae per manus magistri Gaufridi de Bellomonte Cancellarii et Roberti de Baro Protonotarii Regni Siciliae anno 1268. [E. M. J.]

De Lellis, it should be noted, gives correctly the name, as it was written in the Register, of the witness 'Rogerio Comite Celanensi', and not as in Del Giudice: 'Regio'; cf. E. Jamison, *I Conti di Molise e di Marsia nei secoli XII e XIII*, p. 143, n. 4 in *Atti del Convegno Storico Abruzzese-Molisano I*, Casalbordino, 1932.

Durrieu I, p. 257: ff. 10-15, 'Privilegia', 24 décembre 1268 au 18 mai 1296; Capasso, p. 7, Ind. XII (1268-1269) dic.-giugno, Privilegia, ff. 10-15.

No. 12. REG. ANG. NO. 4 (1269 B) f. 30. 1269, 7 April, Ind. XII, Foggia

Scriptum est Petro de Baiocis et Bernardo de Brolio . . . according to the form of the letters addressed ad Rogerium de Celano vel eius procuratorem. . . Fogie, septimo Aprilis, XII^o. Indictione.

This and the two following 'Scripta', Nos. 13 and 14 are concerned with the inquisition into the right of count Roger to the Counties of Molise, Celano and Albe; see *I conti*, p. 144 and n. 1. [E. M. J.]

De Lellis I, p. 58: Magistris Petro de Baiocis, et Bernardo de Brolio Legum Professoribus commissio ad procedendum contra Rogerium de Celano f. 30, et provisio sequenti modo qua inquiritur super Comitatus Molisii, Celani et Albae, f. 30, et alia provisio sequens ibidem. [E. M. J.]

Durrieu I, p. 258: ff. 23-33, 'Extravagantes infra regnum', 3 février au 15 avril, 1269; Capasso, p. 7.

No. 13. REG. CIT. f. 30. 1269, 4 April, Ind. XII, Foggia

Scriptum est Bernardo de Brolio . . . whereas in the matter inter magistrum Camerarium procuratorem nostrum nomine nostro ex una parte et nobilem virum Rogerium dictum comitem de Celano seu Bartholomeum de Balneo procuratorem ejus ex altera, super comitatibus Molisii, Celani et Albae, a curia nostra predicti Petrus de Baiocis et Petrus Cocus ad recipiendum testes senes et valitudinarios, quos utraque pars producere voluerit a tempore commissionis usque ad quatuor menses have been appointed, now since Petrus Cocus has died, Bernardus de Brolio is substituted for him . . . Fogie, IV^o Aprilis, XII^o Indictionis.

Durrieu, *ibid.*; Capasso, *ibid.*

No. 14. REG. CIT. f. 30. 1269, 1 April, Ind. XII, Foggia

Scriptum est Justiciariis, secretis etc., regarding the testes in negotio quod est inter nos et Comitem Celanensem, Fogie, primo Aprilis, XII^o. Indictionis. [E. M. J.]

Durrieu, *ibid.*; Capasso, *ibid.*

No. 15. REG. ANG. NO. 4 (1269 B) contd. f. 60.

1269, 14 March, Ind. XII, Foggia

Commission dated in the Register: Fogie, XIV Martii, XII^e Ind.

De Lellis I, pp. 65–66: *Judici Andreae de Ponterolo, Commissario negotii quod habemus cum Comitibus Celani loco quondam magistri Petri Coci.* [E. M. J.]

Durrieu I, p. 258: ff. 60, 61, 'Just. Aprucii', 2 mars au 9 mai, 1269; Capasso, p. 7.

No. 16. REG. ANG. NO. 5 (1269 C) f. 1.

1270 (January, Ind. XIII)

Pro Comite Camerario (i.e. Peter de Beaumont, count of Montescaglioso and Chamberlain of the Kingdom of Sicily, 1266–1273). *Justitiario Terrae Laboris et Comitatus Molisii, informing him of the grant to Peter of the County of Celano on the occasion of his marriage with Philippa, daughter of Count Roger. . . . Regni nostri anno quinto. The rest of the date in the Register was illegible, but the documents on the reverse of the folio were dated: Januarii, XIII Indictionis.*

Cit. I Conti, p. 144, n. 3.

De Lellis I, p. 107; *Provisiones sequentes diriguntur Justitiario Terrae Laboris et Comitatus Molisii. Concessio comitatus Celani, quia de nostro assensu duxit (i.e. Peter de Beaumont) uxorem nobilem Philippam filiam nobilis Rogerii Comitibus, f. p^o.*

Note: Peter de Beaumont held the county of Celano for a very brief period, because it was restored to Count Roger before 23 January, 1270, but Peter retained the County of Albe as Philippa's dowry.

[E. M. J.]

Durrieu I, p. 260: ff. II–VIII, 'Justitiario et erario Terre Laboris et comitatus Molisii' . . . janvier au 12 mars, 1270; Capasso, p. 10. Both Durrieu and Capasso place the beginning of this Register at f. II, unlike De Lellis, who gives 'f. primo', but they agree with him in noting that the first items are addressed to the Justiciar of the Terra di Lavoro and County of Molise.

No. 17. REG. CIT. f. 1.

1270 (January, Ind. XIII)

Pro Comite Celani (i.e. Count Roger, as above) . . . Regni nostri anno quinto. The rest of the date in the register was illegible, but the reverse of the folio was dated January, XIII Indictionis. This document deals also with the grant of the County of Celano.

[E. M. J.]

Durrieu, *ibid.*; Capasso, *ibid.*

No. 18. REG. CIT. f. 41.

1270, 23 January, Ind. XIII, Capua

Scriptum est Justitiario Aprucii, ordering the barons and vassals of the county of Celano to take the oath of security to Count Roger, to whom the county has been granted.

The text is published by B. Capasso, *Sui Diurnali di Matteo da Giovinazzo*, 2^a. ed. (Biblioteca Critica di Letteratura Italiana, n. 3), Florence, 1895, pp. 44, 45, together with the text of the Privilege granting the County to Count Roger; *cit. I Conti*, p. 145, n. 4.

De Lellis I, p. 116: *Nobili Rogerio Comitibus Celani, cui concessimus Comitatum Celani provisio, quod assecuretur a Baronibus et Vassallis dicti Comitatus, f. 41.* [E. M. J.]

Durrieu I, p. 260: ff. XLI–XLVIII, 'Just. et erario Aprucii', 17 jan. au 23 mars 1270; Capasso, p. 9.

No. 19. REG. ANG. No. 5 (1269 C) contd. f. 41 r.

1270, 27 January, Ind. XIII, Capua

Scriptum est Justitiario Aprutii etc.; *On the petition of Count Roger of Celano the vassals of Rocca de Medio (Rocca di Mezzo, prov. L'Aquila) are ordered to pay all subventions and dues to him, and not as they had done for a time to the justiciars on behalf of the Curia.* Datum Capue, XXVII Januarii, Indictionis XIII.

Cit. *I Conti*, p. 145 and n. 5.

De Lellis I, p. 116: Provisiones sequentes diriguntur Justitiario Aprutii. Nobili Rogerio Comiti Celani provisio pro vassallis Terrae Suae Roccae de Medio, f. 41 r.^o [E. M. J.]

Durrieu, *ibid.*; Capasso *ibid.*

No. 20. REG. CIT. f. 124.

1270, 10 February, Ind. XIII, Capua

Datum Capue, X Februarii, XIII Indictionis.

De Lellis I, p. 136: Rogerio Comiti Celani provisio pro reintegratione Castri Cuculli ad dictum Comitatum. f. 124. [E. M. J.]

De Lellis II, p. 260: Et in hac forma fuit expedita provisio Herrico de Castro Ilderis supra in fol. 64. [E. M. J.]

This extract is given by De Lellis joined to the provision for eleven feudatories, mentioned by name, 'contumacibus in praestandum servitium pro inquisitione valoris feudaliu eorum', which he took from f. 65 of the Register. The provision for these feudatories is published among the documents from 'I fogli perduti' p. 128, No. 968, in *Atti perduti*, I, ii, but the extract now printed was omitted, as it would seem, because f. 64 was at the time of publication preserved in the 'Nuovi registri angioini' (cf. *Atti perduti*, I, ii, p. 125, n. 1).

Durrieu I, p. 286 ends this register with f. 54, and does not refer to the further ff. 55, 60, 63, 64, 67 e 69 which were in the 'Nuovi registri angioini' (I, f. 11-17); for ff. 31-54 he gives the rubric 'Magistris procuratoribus et magistris portulanis regni tam citra quam ultra Farum', 1^{er} septembre au 31 décembre 1275; Capasso, p. 37.

Pro Biscotto

Scriptum est eidem (Simoni de Bellovidere) etc. Cum per Maurum Pirontum et Nicolaum Castaldum, magistros portulanos et procuratores Apulie, de biscotto Curie, quod est per manus eorum, cantaria mille ad cantarum generale ad partes Achaye mandaverimus destinari assignando ibidem Girardo de Marsilia capitaneo decem galearum nostrarum in ipsis partibus commorancium sicut eis nostris damus licteris in mandatis, proviso quod una de teridis Curie nostre per te solidatis et armatis ad hoc deputari debeat, et si terida ipsa tocius predicte quantitatis capax non fuerit, illud quod inde restiterit inter alias teridas quinque cum Philippo de Gonessa regni Sicilie marescallo, in

principatu Achaye balivo et vicario generali ad partes ipsas transfretaturo onerari debeat et per eosdem magistros portulanos ad dictum capitaneum destinari, fidelitati tue precipimus quatenus, postquam tota predicti biscotti quantitas aput Brundusium delata fuerit pro oneranda in ea quantitate ipsa ad partes predictas deferenda, unam cum predictis teridis Curie nostre per te solidatam et armatam ad viagium supradictum debeas computare; et si forte tota quantitas ipsa in eadem terida onerari non poterit, quantitatem inde restantem inter alias predictas teridas cum dicto marescallo transfretaturas per eosdem magistros portulanos mandes et facias onerari, sic quod tota quantitas predictorum mille cantariorum biscotti tam cum predicta una terida quam cum aliis quinque teridis ad partes Achaye supradictas integre deferentur et, quia eisdem magistris portulanis per licteras nostras injungimus ut preter predicta mille cantaria biscotti alia trecenta cantaria de predicto biscotto Curie nostre, quod est per manus ipsorum, aput Brundusium mictere et (tibi, *ed.*) pro serviciis nostris ibidem assignare procurent, volumus et tue fidelitati precipimus quatenus ipsa trecenta cantaria biscotti ab eis vel eorum nunciis in eadem terra Brundusii pro parte Curie nostre recipere et pro eisdem serviciis nostris conservare procures; quibus de ipsorum trecentorum cantariorum biscotti receptione ad eorum cautelam ydoneam facias apodixam. Datum ut supra (apud Lacumpensilem die III augusti VIII indictionis). [B. M.]

Commissio

Scriptum est Manfredo dicto de Lacupensule habitatori Potencie fidei suo etc. de fide, prudencia et legalitate tua confisi te magistrum procuratorem omnium terrarum nostrarum Principatus Achaye necnon magistrum omnium araciary et massariarum nostrarum, quas habemus in partibus ipsis, quibuslibet aliis inde amotis, usque ad nostrum beneplacitum duximus statuendum, fidelitati tue firmiter et districte mandantes quatenus statim receptis presentibus ad partes ipsas presencialiter debeas te conferre et terras ipsas omnes cum vineis, jardenis, olivetis, domibus, molendinis, furnis et possessionibus aliis Curie nostre, quas habemus in terris ipsis ac massarias et aracias nostras, si que in partibus ipsis sunt, cum animalibus, victualibus et aliis utensilibus eorundem, diligenter et fideliter tamquam bonus paterfamilias pro parte Curie nostre debeas procurare, et possessiones ipsas excoli et laborari facias sicut decet, necnon campos et animalia massariarum ipsarum frequenter et sepe requiras et visites et ad oculum videas ac instes sollicitudine opportuna, ut in campis ipsis bene et continue laborent, bona et ampla sententia diligenter ac studiose fiant et sata bene colantur et custodiantur ac victualia satorum ipsorum studiose et fideliter reponantur temporibus oportunis ut

nulla in hiisfraus, circumvencio seu negligentia commictatur; animalia etiam omnia massariarum nostrarum diligenter, fideliter et sollicite custodiantur vel nulla ex eis vel fetibus eorundem defectu custodie seu negligentia qualibet mori, subtrahi vel modo quolibet alienari contingat in Curie nostre dampnum cum deinde defectu si quis in predictis affuerit tibi nostra Curia immitatur; Volumus insuper et mandamus ut in massariis ipsis non delecteris in multitudine familie nec etiam tui submassarii delectentur, sed illi tantum ad servicia massariarum ipsarum retineantur quod necessarii, utiles, ydonei et sufficientes fuerint pro congrua procuracione camporum et diligente custodia animalium ac aliis negociis massariarum ipsarum, ut pro superfluo numero huiusmodi personarum expensas subire inutiliter nostra Curia non contingat et campi, animalia et negocia alia ipsarum massariarum utiliter et commode procurentur, jumenta omnia, stallones, scactas (?), pultros, pultras, mulos, mulas, et asinos ac equitaturas singulas, et animalia quelibet araciary ipsarum, per pilaturas, balsanaturas et mercaturas eorum, necnon utensilia quelibet et res singulas ac jura quelibet deputata ad comodum servicium et utilitatem araciary ipsarum, que hucusque in partibus ipsis procurate fuerunt, procures et facias cum omni diligentia pro parte nostre Curie procurari et super meliorandis et augmentandis terris, possessionibus et massariis et araciis ipsis ac animalibus earundem eam curam, diligentiam et sollicitudinem semper adhibeas et facias adhiberi, quod, sic speramus et credimus, contencionis nostre existit, terre, possessiones, massarie et aracie ipse augmentum et melioracionem suscipiant tua solercia faciente, et semper aracias ipsas in locis bonis, aptis et congruis in quibus inveniatur copia pascuorum et aque et alias bene et salubriter esse possint, et specialiter in locis illis in quibus usque nunc esse consueverint, studeas et facias commorari: Damus quoque tibi plenariam potestatem amovendi prepositos araciary ipsarum et substituendi in eodem servicio, si expedire videris, ac de novo statuendum, si ibi non fuerint sufficientes, ydoneos et fideles in numero condecanti, considerato numero et qualitate animalium araciary ipsarum per quos servicium ipsum bene et diligenter fiat ad Curie nostre comodum et profectum; nostra tamen Curia tibi exinde totaliter incumbente ut singula animalia araciary ipsarum bene et utiliter procurentur et quod ex eorum fetibus utilitatem quam decet et bonam ac fertilem nostra Curia consequatur, pultras autem et pultros quas et quos ex fetibus jumentorum araciary ipsarum toto officii tui tempore statim, quod ferrum ad mercandum sustinere poterunt, et ecciam alia animalia araciary ipsarum que inveneris non mercata necnon et omnia alia que officii tui tempore undecumque recipieris que mercata non fuerint, merco Curie nostre ad florem de lisa, te presente apto et competenti tempore predicto merco Curie nostre facias mercari, quod mercum recipias a Philippo de Gonesa regni Sicilie marescallo, balivo, et vicario nostro generali in predicto principatu Achaye militi, familiari et fideli nostro, vel ab illo cui ipse hoc commiserit, restituendum sibi vicequalibet statim quod hujus (?) animalia fuerint per te predicto merco Curie nostre mercata, ita quod post mercacionem predictorum animalium mercum ipsum medio tempore non remaneat apud te et in araciis ipsis nulla animalia remaneant inmercata merco predicto: Volumus preterea et mandamus tibi ut ad requisitionem ipsius Philippi de Lagonessa pecuniam, victualia et alia singula necessaria pro solidis et municione castrorum nostrorum parcium predictarum, necnon pro solvendis gagiis nostris in comitiva sua in eisdem partibus deputatis, de proventibus et redditibus ipsarum terrarum possessionum massariarum et araciary, que erunt per manus tuas,

tibi (*corr.* sibi, *ed.*) debeas exhibere, a quo de hiis que sibi dederis recipias ad tui cautelam ydoneam apodixam; reliquam vero quantitatem pecunie victualium, animalium et aliarum rerum percipiendarum per te pro parte Curie nostre de terris, possessionibus, massariis et araciis ipsis ad opus nostrum secundum mandatum et ordinationem et designationem ipsius Philippi diligenter et fideliter conserves et facias conservari, factis nichilominus in procurandis terris, colendis possessionibus, custodiendis et conservandis massariis et araciis ipsis ac animalibus earundem expensis justis, necessariis, moderatis de pecunia supradicta, que fines modestie aliquatenus non excedant: Et statim quod ad partes ipsas te contuleris fieri facias quatuor publica consimilia instrumenta, continencia formam presencium, nomina terrarum Curie nostre ipsius Principatus annuos redditus et proventus, tam ipsarum terrarum quam vinearum, domorum et aliarum possessionum, quas Curia nostra habet in terris ipsis, per partes et membra particulariter et distincte necnon massarias ipsas cum domibus, vineis, jardenis, furnis, molendinis, si qua sunt ibi alii quod possessionibus singulis, animalibus, victualibus satis, suppellectilibus et utensilibus et generaliter cum rebus singulis cujuscumque generis et speciei existant in massariis ipsis, cum expressione et distinctione, quantitate et qualitate rei cujuslibet et cum distinctione, qualitate et quantitate et sexus ac mercorum animalium quorumlibet pilaturarum et balsanaturarum, equitaturarum quarumlibet massariarum et araciarum ipsarum, necnon utensilibus eorundem, quorum unum celsitudini nostre, aliud Magistris Rationalibus trasmittas, tercium dicto Philippo assignes, et quartum tibi retineas producenda tue tempore rationis: Committimus etiam tibi et presencium auctoritate mandamus, ut questiones singulas criminales et civiles que in terris ipsis coram te mote fuerint terminare debeas, sicut juris fuerit et secundum consuetudinem regionis, et pecuniam, quam videlicet acquisiveris in necessariis et utilibus serviciis nostris ipsarum parcium, convertere debeas juxta requisicionem et mandatum ipsius Philippi, et sicut videris expedire recipias et in scriptis a Galeraymo de Yvriaco, regni Sicilie senescallo, dudum vicario nostro in partibus ipsis, sub sigillo ipsius, questiones omnes que coram eo in predictis partibus mote et per ipsum comminate minime extiterunt ac mandata nostra omnia sibi directa que execucioni debite non mandavit, et questiones ipsas terminare et predicta mandata exequi debeas in hiis in quibus terminanda et exequenda remanserunt per eum: De singulis vero locationibus terrarum, possessionum et aliorum jurium que in partibus ipsis habemus et de tota pecunia, quam eidem Philippo assignaveris seu pro aliis serviciis nostris ipsarum parcium expenderis, confici facias anno quolibet tres quaternos consimiles, quorum unum tibi retineas, alium dicto Philippo assignes, et tercium sub sigillo tuo dictis Magistris Racionalibus debeas destinare. Et quia nolumus te in predictis serviciis nostris expensis propriis laborare, placet nobis et volumus ut de predicta pecunia Curie nostre que erit per manus tuas expensas tibi retineas pro te, duobus scuteriis et tribus equis ad rationem de granis auri tredecim inter homines et equum per diem quamdiu in predictis nostris serviciis moram trahes, et uni notar[i]o quem te habere volumus prescribendis rationibus predicti officii similiter expensas sibi exhibeas de pecunia supradicta pro se et equo uno ad predictam rationem de granis tresdecim inter homines et equum per diem donec tecum in predictis nostris serviciis moram trahet. Datum apud Lacumpensulem die II augusti, (VIII indictionis).

No. 197. REG. ANG. NO. 37 (1279–1280 B) contd. f. 90 ET t.

1280, 8 August, Ind. VIII, Lagopesole

Scriptum est Philippo de Lagonessa regni Sicilie marescallo, balivo et vicario generali in principatu Achaye etc. Scire te volumus quod pro transitu tuo, familie tue et gentis nostre venture tecum ad partes predictas, teridas sex per Symonem de Bellovidere viceammiratum etc. mandavimus deputari, injuncto etiam per licteras nostras Pascali de Garino prothontino Brundusii cum duabus galeis et uno galeone ad custodiam maritime Apulie deputatis, quibus de mandato culminis nostri preest, tecum in comitiva dictarum teridarum debeat transfretare, necnon et eidem viceammirato ut de nullo quatringscantariis biscotti mictendis et assignandis ei in Brundusio de mandato nostro per Maurum Pironum et Nicolaum Castaldum magistros portulanos et procuratores Apulie et Aprucii, exhibita eidem prothontino quantitate necessaria pro papanatica (sic) ipsorum galeonis et galearum pro mensibus tribus in vassellis ipsis ferenda, superfluum quantitatem videlicet cantaria mille centum onerari et immicti faciat in teridis predictis, si forte ipso bono modo capaces fuerint totius quantitatis ipsius; et si forte tota hujusmodi quantitas comode onerari et deferri non posset in teridis eisdem, id quod supererit in predictis etiam galeis et galeone onerari faciat et deferri, tue fidelitati mandantes quatenus, postquam transfretaveris et fueris cum vassellis ipsis in partibus supradictis, mictas omnia vassella ipsa cum omnibus ipsis cantariis biscotti mille centum Girardo de Marsilia capitaneo decem galearum in partibus Achaye commorantium et sibi facias assignari, ut distribuantur et exhibeantur per eum pro panatica vassellorum ipsorum, prout sibi per nostras licteras est injunctum; preterea fecimus tibi assignari de Camera nostra penes nos statuta pro solidis predictorum omnium vassellorum, videlicet duarum galearum et unius galeonis, quibus preest prothontinus predictus pro mensibus duobus, necnon sex teridarum tecum navigaturarum et decem galearum nostrarum, quibus preest dictus Girardus, pro mensibus tribus in subscriptis speciebus infra-scriptam pecunie quantitatem, videlicet pro predictis duabus galeis et uno galeone, quibus preest prothontinus predictus, pro eisdem duobus mensibus computatis solidis ejusdem prothontini uncias auri ducentas quattraginta unam et tarenos decem et octo ad rationem de unciis auri quinquaginta pro qualibet galea et unciis decem et novem pro galeone predicto. Item pro predictis sex teridis uncias centum quinquaginta et tarenos novem ad rationem de comitis duobus, naucleriis quatuor et marenariis decem et novem pro qualibet teridarum ipsarum, necnon de tarenis viginti septem pro quolibet comite, tarenis tredecim et grana decem pro quolibet nauclerio, et de tarenis septem et medio pro quolibet marinariis ipsorum per mensem, et pro predictis decem galeis uncias auri mille quingentas ad rationem de unciis auri quinquaginta pro qualibet galearum ipsarum per mensem. Que tota pecunia tibi pro

predictis omnibus solidis de predicta nostra Camera assignata est in summa unciarum mille octingentorum nonaginta unius et tarenorum viginti septem, quam quidem quantitatem pecunie statim quod in predictis partibus fueris, videlicet predictam quantitatem contingentem pro solidis predictarum galearum et unius galeonis, quibus preest predictus prothontinus Brundusii, eidem prothontino assignes et totam reliquam quantitatem contingentem, tam pro solidis predictarum teridarum, quam pro solidis decem galearum, quibus preest predictus Girardus in dictis partibus, eidem Girardo transmittas per fidos et ydoneos nuncios tuos distribuendum per eos pro solidis vassellorum ipsorum sicut habet per nostras licteras in mandatis; fecimus insuper assignari tibi de predicta Camera nostra pro solidis quinque prothontinorum existencium in predictis galeis nostris capitanie predicti Girardi de Marsilia videlicet: Gayete, Iscle, Neapolis, Monopoli, et Vigiliarum, ultra totam predictam quantitatem pecunie, alias uncias auri viginti septem pro predictis mensibus tribus ad rationem de unciis auri una et tarenis viginti quatuor pro quolibet eorum per mensem eidem Girardo similiter cum predicta alia pecunia destinanda, tueque fidelitati precipimus, ut tam pecuniam ipsam quam totam aliam supradictam mictas ipsi Girardo in predictis galeis et galeone, quibus preest prothontinus Brundusii supradictus, injungens ex parte nostra ipsi Prothontino necnon comitis, naucleriis et personis aliis tam ipsorum vassellorum quam predictarum aliarum omnium teridarum, ut cum omnibus vassellis ipsis ad ipsum Girardum se conferant et cum eo sub capitania sua simul cum aliis vassellis vestris sub eo existentibus in nostris serviciis commorentur et sibi ad honorem et fidelitatem nostram de serviciis ipsis pareant et intendant. Ceterum scire te volumus quod dicto Girardo per licteras nostras injungimus quod cum omnibus vassellis ipsis, tam videlicet galeis et galeone, quam teridis et aliis tribus teridis aptis, per eum cum galeis nostris in eisdem partibus remaneat et sit in nostris serviciis usque ad tempus conveniens circa festum beati Andree primo venturi, et festo ipso appropinquante sic habito respectu ad tempus sufficiens pro redditu suo de partibus ipsis usque Brundusium congruo tempore abinde recedat et ad ipsam terram Brundusii revertatur, quod in ipso festo sit presens in eadem terra Brundusii cum omnibus galeis et galeone predictis, assignatis tibi vel nuncio tuo omnibus predictis novem teridis cum omnibus afisis, corredis et garnimentis eorum et toto biscocto pro mortuis et absentibus de predicta quantitate residuo apud eum, marinarios tamen et personas alias teridarum ipsarum reducere debeant in galeis predictis; quas quidem teridas cum omnibus afisis, corredis, garnimentis et biscocto predictis ab eo recipias et facias diligenter et salubriter custodiri et in nostris serviciis sicut expedierit deputari, facturus ei de receptione ipsarum ydoneam apodixam; predicta vero quantitas pecunie tribuenda per te predicto prothontino Brundusii debeat computari eidem prothontino et personis deputatis in galeis et galeone predictis pro solidis et aliis consuetis necessariis eorum usque per totum mensem octubris proximo futuro none indictionis. Addicimus etiam et mandamus tibi quod ad majorem cautelam Curie nostre statuas et ordines aliquem loco tui de quo tanquam de te ipso confidas, qui ad predictum Girardum se conferat et moretur cum predictis galeis, quousque dictus Girardus morabitur in partibus illis pro serviciis nostris, et sciat et videat oculata fide omnem pagam que fiet omnibus personis galearum ipsarum per eundem Girardum et totum dampnum, si quis affuerit, pro mortuis, fugitivis et absentibus sciat, in scriptis redigat, et pecuniam defectus ipsius quod per predictum Girardum recipi et conservare permittat et in redditu suo ad partes

istas in nostra Camera assignabit; quod predictis per te statuendis significet nobis et magistris rationalibus etc. per litteras suas nomina et cognomina mortuorum, fugitivorum et quantitatem pecunie quam pro predictis defectibus dictus Girardus duxerit retinendum. Preterea assignari fecimus tibi de predicta Camera nostra pro expensis predicti Girardi et Guillelmi de Porte, thesaurarii deputati cum eo, pro predictis tribus mensibus uncias auri novem, videlicet pro expensis predicti Girardi uncias auri sex ad rationem de unciis auri duabus per mensem, et pro expensis predicti Guillelmi uncias auri tres ad rationem de unciis auri una per mensem, quas autem novem predicto Girardo et Guillelmo transmittas cum alia pecunia eidem Girardo mictenda. Qua tota predicta pecunie quantitas continetur in speciebus subscriptis, videlicet in augustalibus et karolensibus auri uncie mille nongente viginti septem. Datum apud Lacumpensilem die VIII augusti (VIII indictionis). [B. M.]

Goffrido Poliano (*corr.* de Policeno, Poilechien, *ed.*), provisor castorum Sicilie. Pro castellano castri Chephaludi.

[Summary B. M.]

Cf. *ante*, No. 213, for another copy of this letter; 'Goffridus de Policeno' (see E. Sthamer, *Die Verwaltung der Kastelle, passim*), was appointed 'provisor' in June 1279, and died in office before 3 April, 1281. This order concerned the substitution of a new castellan of Cefalù, Petrus de Syneto, who was in office 3 April, 1281, for the superseded castellan, name unknown.

1281, before 3 April, Ind. IX

De Lellis II: Justiciario Aprucii mandatum quod submoneat Barones et pheudatarios iurisdictionis sue ad prestandum servicium nobiscum apud Urbem Veterem et barones (latini) sunt videlicet: among them is Petrus de Luparia. [B. M.]

C. Minieri Riccio, *Nuovi studi*, p. 18 publishes a full extract from this register f. 107 (not 107 t. as De Lellis quotes) of a similar order addressed 'Justitiario Aprutii' with the names of all the feudatories; but 'Petrus de Luparia' is not among them, correctly as it would seem, because Lupara is in Molise under the justiciar of Terra di Lavoro and not under the justiciar of Aprutium. Consequently the address of the present document would appear to be erroneous.

Durrieu, *ibid.*; Capasso, *ibid.* Since Charles I arrived at Orvieto on 3 April, 1281, this mandate was presumably issued before this date, *ed.*
